

HIGHWAY 7 CORRIDOR & VAUGHAN NORTH-SOUTH LINK PUBLIC TRANSIT IMPROVEMENTS

SUMMARY LISTING OF EA COMPLIANCE DOCUMENTATION FOR H3 SEGMENT YONGE STREET (RICHMOND HILL CENTRE) TO BIRCHMOUNT ROAD December 2016

This Annual Compliance Review has been prepared primarily by the Design Build Consortia, who are implementing the projects under Design-Build contract. Compliance items related to policy, landuse planning, operations and maintenance activities, etc. are reported by York Region. The Compliance Review is carried out by an independent Environmental Compliance Lead, on behalf of York Region’s Environmental Compliance Manager. All non- closed items are subject to compliance review. Occasionally, there are items with issues that could not be addressed within the time between the compliance review and submission date. These items are noted, and steps to address the issue are indicated. These items will be reviewed in next year’s submission.

Clark Gunter, WSP MMM Group	Steve Mota, Region of York
Environmental Compliance Lead	Environmental Compliance Manager

Legend

Completion Status		Notes
On-going / In progress		Work has begun on this item but not completed
Completed		All work completed for this item.
Future Work		No work has begun on this item.
No Action Required		No action is required to meet commitments
Does not apply		Does not apply to segment H3.
Compliance Review		
Column	Results	Notes
Status	Yes	Status accepted: the statement about the status of the item is accepted based on the reviewers understanding of the project.
	No	Status not accepted: the statement about the status of the item is not accepted based on the reviewers understanding of the project.
	UNC	Unclear: Further explanation requested regarding the status of the item.
Results	AC	Accepted means that items are reported as in-progress but have not reached a reportable milestone (i.e., there is no documents available). The statement on status is accepted based on the reviewers understanding of the project.
	EF	Evidence Found means that the evidence provided reasonably shows that a compliance action (i.e., something done to address a compliance item) has been undertaken.
	EFC	Evidence Found of Change means that the evidence provided reasonably shows that a compliance action has been undertaken but the action is a change from the compliance item.
	NSE	Not Sufficient Evidence means that the evidence provided although applicable to the compliance action, is not adequate to reasonably show that the compliance action has been undertaken, or that evidence is believed to be available
	ENF	Evidence Not Found means that evidence has either not been provided or that the evidence does not appear related to the compliance action.
	Closed (year)	No further action or review of the item is warranted. Either all condition / commitments for the item have been addressed and reviewed, or the item does not apply or requires no action.
Notes	Comments in regard to the compliance review for that year. In addition, the closed components of an item are tracked. For example, an item may have three distinct components, designated by [1], [2] and [3]. If only component [1] was completed in 2013, the column will include a statement that component [1] was closed in 2013. That statement will remain in each subsequent ACR report until all components (i.e., [2] and [3]) are closed. For information on items closed in previous years the reader is directed to the ACR for the year the item was closed.

Section 1.0 – Background & Purpose of the Program					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
1.	CMP Section 1.0 - "...The ACR documentation will be made available to the MOE, or its' designate upon request, in a timely manner during an on-site inspection or audit ..."	York Region	Status – Ongoing. CMP/ACR documentation will be provided to MOECC annually.	Letter from MOECC acknowledging receipt of 2015 ACR (ID#2016-001)	Yes	EF	Evidence listed was found to acknowledge receipt of the 2015 ACR.
1.1	CMP Section 1.1 -The preliminary design for segments H2 and H3 is scheduled to be completed in 2008, leading to the tendering of a detail design I build contract in 2009. The estimated construction timing for segments H2 and H3 is within the 2013 period (as identified in section 4.3 of the April 2008 York Region Rapid Transit Steering Committee report, included as supplemental information in Appendix B) . Design of segments H1 and H4 has not commenced. The estimated construction timing for segments H1 and H4 is currently scheduled beyond 2013. The schedule for design and construction of segment V1 is described in section 1.2. Design and construction of segment W1 will be funded through the Region's 10 Year Roads Construction Program. The design work has commenced in late 2007 and construction tender is currently scheduled for 2008 with completion in 2009.	York Region	Status – Ongoing. The schedule is changeable based on the availability of funding. The status and timing of the different segments is addressed in the key map attached to the transmittal letter with each ACR submission.	Included with the ACR cover letters is a Key Map that shows the schedule -	Yes	EF	Evidence listed was found to acknowledge receipt of the 2015 ACR.
2.	CMP Section 1.2 - "Vaughan N-S Link segment of the undertaking is not included in this CMP..."	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Section 1.0 – Background & Purpose of the Program					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
3.	CMP Section 1.3 - "Modified alignment required at IBM / Cedarland Avenue" "... In January 2008, Regional Council endorsed a modified alignment along Cedarland Drive and Warden Avenue as a local refinement to the undertaking approved in the EA. ... An amendment report will be prepared and submitted for approval following the process described in section 6.0 of this CMP."	York Region	Status – Completed The Final Cedarland Alignment Modification Report was submitted to MOECC on February 2010 as Appendix 4 of the 2009 Annual Compliance Report. MOECC's comments on this alignment are addressed below as part of Appendix 4. This modification is being carried forward as the preferred design during the Detail Design Phase.		Yes	Closed (2009)	
4.	CMP Section 1.4 - "Cornell Terminal site plan is evolving post-EA approval." "... Since approval of the EA, progress has been made in the development of what is now known as the Cornell Transit Terminal. ... Once the Cornell Terminal site plan is complete, it will be documented in the ACR."	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
5.	1.0 General Conditions 1.1 The Proponent shall comply with all the provisions of the EA submitted to the MOE which are hereby incorporated by reference except as provided in these conditions and as provided in any other approvals or permits that may be issued.	York Region/ECM - (more specific information to be added by ECM with annual compliance reporting for all cells in this column).	Design, Construction and Operation as specified	Status - Ongoing. CMP/ACR documentation will be provided to MOECC annually. This condition will be addressed once all commitments have been met.	Letter from MOE, February 11, 2016, acknowledging receipt of 2015 ACR (ID#2016-001)	Yes	EF	Evidence listed was found to acknowledge receipt of the 2015 ACR.
6.	1.2 These proposed conditions do not prevent more restrictive conditions being imposed under other statutes.	York Region	As applicable	Status – Completed More restrictive conditions imposed under other statutes are part of the compliance and permitting process. No specific commitment to address as such no action is required		Yes	AC	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
7.	<p>2.0 Public Record</p> <p>2.1 Where a document is required for the Public Record, it shall be provided to the Director for filing with the Public Record maintained for this undertaking[1]. Additional copies of such documents will be provided by the Proponent for public access at[2]:</p> <ul style="list-style-type: none"> a) The Regional Director's Office; b) The Clerks offices of the Regional Municipality of York c) The Town of Richmond Hill; d) The Town of Markham; and e) The City of Vaughan; f) Richmond Hill Central Library; g) Unionville Library; and h) Ansley Grove Library. <p>These documents may also be provided through other means as considered appropriate by the Proponent and acceptable to the Director.</p>	York Region	Design, Construction and Operation as specified	<p>Status - Ongoing.</p> <p>To be completed with the filing of the last ACR.</p> <p>2015 ACR was submitted to [1] MOECC and MOECC acknowledged receipt on February 11, 2016.</p> <p>[2] Copies of the 2015 ACR were provided to Markham, Vaughan, Richmond Hill and York Region Clerks Offices and Libraries.</p>	<p>[1] Letter from MOECC acknowledging receipt of 2015 ACR, dated February 11, 2015(ID#2016-001)</p> <p>[2] Letters provided to Markham, Vaughan, Richmond Hill and York Region Clerks Offices, Libraries (ID#2016-002, 2016-003).</p>	Yes	EF	Evidence was found to acknowledge receipt of the 2015 ACR at listed offices and libraries.

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Stage condition will be addressed	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
8.	<p>3.0 Compliance Monitoring and Reporting</p> <p>3.1 The Proponent shall prepare and submit to the Director for review, comment and for placement on the Public Record an Environmental Assessment CMP as committed to in section 11.4 of the EA. The CMP shall be submitted no later than one year from the date of approval of the undertaking, or 60 days before the commencement of construction, whichever is earlier. A statement must accompany the CMP when submitted to the Director indicating that it is intended to fulfill this condition. The CMP, as may be amended by the Director, shall be carried out by the Proponent.</p>	York Region	Design stage (Timing as specified in condition 3.1)	Status – Complete. CMP was submitted MOECC on August 18, 2008, and approved on December 29, 2008, as reported and verified by ECM. MOE acknowledgement of receipt of Annual Compliance Reports will continue to be reported under Item 1.		Yes	Closed (2015)	Evidence was found to support the assertion of acknowledgement of receipt of Annual Compliance Reports

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
9.	3.2 The Proponent shall provide a copy of the CMP to those agencies, affected stakeholders and/or members of the public who expressed an interest in the activity being addressed or being involved in the subsequent work no later than one year from the date of approval of the undertaking, or 60 days before the commencement of construction, whichever is earlier. If the Director amends the CMP, the Proponent shall ensure that the amended copy of the CMP is provided to those agencies, affected stakeholders and/or members of the public who expressed an interest in the activity being addressed or being involved in a timely manner.	York Region	Design stage (Timing as specified in condition 3.1)	Status – Completed Condition addressed with the approval of the CMP and circulation to affected/interested stakeholders.		Yes	Closed (2009)	
10.	3.3 The Proponent shall prepare a CMP in order to provide a framework for the monitoring of the Proponent's fulfillment of the conditions of approval as set out in this Notice of Approval, and the fulfillment of the provisions of the EA for mitigation measures, built-in attributes to reduce environmental effects, public and Aboriginal community consultation, additional studies and work to be carried out, and	York Region	Design, Construction and Operation as specified	Status - Complete CMP was submitted to MOE on August 18, 2008, and approved on December 29, 2008, as reported and verified by ECM in Item 8. MOE acknowledgement of receipt of Annual Compliance Reports will continue to be reported under Item 1.		Yes	Closed (2015)	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
	for all other commitments made during the preparation of the EA and the subsequent review of the EA.							
11.	3.4 The CMP shall at a minimum: a) set out the purpose, method and frequency of activities to fulfill compliance; b) provide a framework for recording and documenting results through the ACR; c) describe the actions required to address the commitments; d) provide an implementation schedule for when commitments shall be completed; e) provide indicators of compliance; and f) Include, but not be limited to, a consideration of the commitments outlined in Tables 10.4-1 to 10.4-4 and Tables 11.3-1 to 11.4-2 in the EA, and Proponent's letter and attachments dated May 5, 2006 (included in Appendix E)	York Region	Status – completed Condition addressed with the approval of the CMP.	Status – Completed Condition addressed with the approval of the CMP.		Yes	Closed (2011)	
12.	3.6 The Proponent shall prepare an ACR which describes the results of the CMP and shall do so annually. 3.7 The Proponent shall submit each	York Region	Design, Construction and Operation as specified	Status – Ongoing. The first ACR was submitted to MOE in February 2010 [1] and will be followed by annual updates [2] as specified in the CMP.	[1] Letter from MOECC acknowledging receipt of 2015 ACR, dated February 11, 2015(ID#2016-001) [2] Letters provided to Markham, Vaughan, Richmond Hill and York	Yes	EF	Evidence was found to acknowledge receipt of the 2015 ACR at listed offices and libraries.

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
	<p>ACR to the Director for review and comment and for placement on the Public Record.</p> <p>3.8 The timing for the submission of the ACRs shall be set out in the CMP, including the timing for submission of the first ACR.</p> <p>3.9 The Proponent shall submit ACRs until all applicable conditions of approval and commitments of the EA are satisfied or until the Director notifies the Proponent that no further reports are warranted.</p> <p>3.10 When all conditions have been satisfied, the Proponent shall indicate in the ACR that this is its final submission.</p>				Region Clerks Offices, Libraries (ID#2016-002, 2016-003).			
13.	<p>4.0 Transit Technology</p> <p>4.1 The Proponent shall prepare a TCP that identifies how, when and if the undertaking will convert from a Bus Rapid Transit System (BRT) to a Light Rail Rapid Transit (LRT).</p>	York Region	Prior to conversion from BRT to LRT technology as required	<p>Status – Completed</p> <p>The potential future evolution from Bus Rapid Transit to higher capacity Light Rail Rapid Transit is not being planned at this time and is ultimately dependant on significant growth in transit ridership and available funding in the future, and at least not expected within the 2031 horizon.</p> <p>York Region has updated its Transportation Master Plan (TMP), November 2016, including the timing of technology conversion from BRT to LRT. The TMP indicates that conversion to LRT will be beyond the 2041 horizon year of the TMP. For purposes of this ACR, we are suggesting that this item be closed as it will</p>	York Region Transportation Planning Memo to File, November 23, 2016, Doc. Ref. # YR-2016-201	Yes	Closed (2016)

				not be addressed within the time frame of ACR reporting.				
14.	<p>4.2 The Proponent shall submit copies of the final TCP to the Regional Director for review and comment and to the Director for placement in the Public Record file.</p> <p>4.3 The Proponent shall notify the Director and Regional Director 30 days before the technology conversion is to occur.</p>	York Region	Prior to conversion from BRT to LRT technology as required	Status-Completed See Item 13 (condition 4.1.)		Yes	Closed (2016)	
15.	<p>4.4 The TCP shall include an implementation schedule.</p> <p>4.5 The TCP shall include information about ridership levels and compatibility of the corridor with other transit systems.</p> <p>4.6 Further to Section 5.2.2.3 of the EA, which outlines that converting from BRT to LRT is dependent on other transit initiatives being developed, a copy of the TCP shall be provided to the City of Toronto, the Toronto Transit Commission, the Town of Richmond Hill, the City of Vaughan, and the Town of Markham for review and comment. The Proponent shall provide these stakeholders a minimum 30-day comment period.</p>	York Region	Prior to conversion from BRT to LRT technology as required	Status - Completed See Item 13 (condition 4.1.)		Yes	Closed (2016)	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
16.	5.0 Air Quality 5.1 The Proponent shall prepare a comprehensive Air Quality Assessment Report to address the air quality impacts of the Region's transportation projects. The study area for the air quality report will be determined by the Proponent in consultation with the Regional Director.[1] 5.2 Copies of the Air Quality Assessment Report shall be submitted to the Regional Director for review and comment and to the Director for placement in the Public Record file.[2] 5.3 The Air Quality Assessment Report shall be submitted to the Regional Director prior to any construction beginning on the undertaking, including site preparation.[3]	York Region	Design Stage	Status-Completed An updated Air Quality Impact Assessment Report for a Study Area Bounded by Hwy50 to York Durham Line was completed in April 2011 using the CAL3QHCR dispersion model as required in the terms and conditions for the Hwy 7 Corridor & Vaughan North-South Assessment Compliance Monitoring Program (CMP). The purpose of the Study was to assess the cumulative air quality effects that may arise due to the proposed Bus Rapid Transit (BRT) undertaking.[1] As per MOE request, copies of the Air Quality Report were submitted to the Director of the Environmental Assessment and Approvals Branch. The MOE noted via letter that it had accepted the Air Quality Assessment report on June 17, 2011 and is satisfied that Condition 5.4 of the EA Notice of Approval has been addressed. [2]		Yes	Closed (2011)	
17.	5.4 The Air Quality Assessment Report shall, at a minimum, include the following: a) A comparison of predicted contaminant concentrations with all available Ontario Regulation 419/05 Air Pollution - Local Air Quality Regulation Schedule 3 standards, ministry's ambient air quality criteria and proposed Canada Wide Standards for: Carbon Monoxide (CO), Nitrogen	York Region	Design Stage	Status - Completed An updated Air Quality Impact Assessment Report for a Study Area Bounded by Hwy50 to York Durham Line was completed in April 2011 using the CAL3QHCR dispersion model as required in the terms and conditions for the Hwy 7 Corridor & Vaughan North-South Assessment Compliance Monitoring Program (CMP). 	h) Calculation of predicted contaminant concentrations at nearby sensitive receptors.[8] i) Traffic volume data[9] j) Detailed presentation of predicted data (including model input data); and,[10] k) Presentation of conclusions and recommendations.[11]							
18.	6.0 Complaints Protocol 6.1 [1] Prior to construction the Proponent shall prepare a Complaints Protocol [2] on how it will deal with and respond to inquiries and complaints received during the construction and operation of the undertaking. The Proponent shall submit the protocol to the Regional Director, District Manager, Town of Markham, Town of Richmond Hill and the City of Vaughan for review and comment [3]. The Complaints Protocol shall be placed on the Public Record [4].	York Region / Contractor	Design	Status - Completed [2009 ACR]Pending submission prior to construction. [1] According to the H3 Work Scope, the construction coordinator will track and report all complaints and issues related to construction activity to YRRTC. When the contractor cannot immediately resolve the complaint, they will contact YRRTC's Community Liaison Specialist who will coordinate a resolution and/or response. A Complaints Protocol will be developed during detailed design based on the above guidelines and will be submitted to the required agencies for review and comment. [2] A complaints protocol was developed in association with YRRTC's communications group. [3, 4] MOECC Approval of condition 6.1 and notification of placing on public record.		Yes	Closed (2011)	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
19.	<p>7.0 Amending the Design of the Undertaking</p> <p>7.1 If the Proponent determines that there is a minor modification and that modification does not alter the expected net effects of the undertaking, the procedure set out in section 11.5 in the EA applies to this modification. [1,3]</p> <p>7.2 Notwithstanding condition 7.1, section 11.5 of the EA does not apply where there is a change to the undertaking within the meaning of section 12 of the EAA.[2]</p> <p>7.3 The Proponent shall consult with EAAB to determine the appropriate steps if there is uncertainty as to application of conditions of approval 7.1 or 7.2.</p>	York Region	Design	<p>Status - Completed.</p> <p>Minor changes, if any, dealt with during design are described under item 67 below. [1]</p> <p>An EA amendment report subtitled "Response to Conditions of Approval – Vaughan N-S Link Subway Alignment Optimization" was approved by the Minister of the Environment on April 4, 2008.[2]</p> <p>The TTC has prepared a separate CMP for the Spadina Subway Extension Project and is responsible for compliance monitoring related to the Vaughan N-S Link segment of the undertaking.</p> <p>No other changes requiring a major amendment have been identified during design. See also item 68 below.</p> <p>The Final Cedarland Alignment Modification Report was submitted to MOE on February 2010 as Appendix 4 of the 2009 Annual Compliance Report. [3]</p> <p>Design is now complete and the segment is now operational. No further design changes have been incorporated in 2015. Refer to Items 67 and 68.</p>		Yes	Closed (2015)	
20.	8.0 Selection of the optimum location for the subway alignment (not applicable for the undertaking covered under this CMP).	York Region	Design Stage	Status – Does not apply to the H3 segment.		Yes	Closed (2014)	

Section 2.0 - Monitoring of Conditions of Approval						Compliance Review		
Item	MOE Condition of EAA approval	Responsible person / agency	Stage condition will be addressed	Status and description of how the condition has been addressed	Compliance Document Reference	Status	Results	Notes
21.	<p>9.1 If a Stage 2 archaeological assessment is required to be prepared and aboriginal archaeological resources are encountered during the preparation of that Assessment, the Proponent shall provide a copy of that assessment to the Huron-Wendat First Nation of Wendake, Quebec and any additional relevant First Nations as identified [1] by the archaeologist, based on the findings of that assessment.</p> <p>9.2 The Proponent shall provide the Huron-Wendat First Nation of Wendake, Quebec and any other relevant First Nation as warranted by the Stage 2 findings with 30 days to provide comments on the Stage 2 Assessment and the opportunity to reasonably participate in the Stage 3 Archaeological Assessment if the Stage 3 Archaeological Assessment is required in relation to aboriginal archaeological resources. [2]</p>	York Region	Design	<p>Status – Completed</p> <p>A Stage 2 Archaeological Assessment was undertaken for the H3 segment and concluded that at the historic Brown’s Corners Cemetery, a Cemetery Investigation was to be undertaken in the Highway 7 ROW in front of the cemetery. The Stage 2 Assessment also concluded that no additional archaeological assessment is required for the remainder of the study corridor and these areas can be considered clear of further archaeological concern.</p> <p>The Cemetery Investigation at Brown’s Corners United Church Cemetery found that all lands in the public Highway 7 ROW in front of the Brown’s Corners Cemetery can be considered clear of archaeological concern, and no further archaeological assessment is required.</p> <p>The Ministry of Tourism and Culture accepted each of these findings.</p> <p>[1] Huron-Wendat First Nation of Wendake, Quebec was notified of the Stage 2 Archaeological Assessment findings via notification dated January 28, 2011 sent in French (the preferred language of communication)</p> <p>[2] Notice of the Stage 3 Archaeological Assessment findings were sent to the Huron-Wendat First Nation of Wendake, Quebec on May 30, 2011.</p>		Yes	Closed (2011)	

Section 3.0 – Compliance Management and Responsibilities					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during Construction	Compliance Document Reference	Status	Results	Notes
21.1	CMP Section 3.1: Roles of the Environmental Compliance Manager:		As per MOECC letter dated April 1, 2016, it is not necessary to report on this item in the ACR.	N/A	Yes	Closed (2016)	
22.	CMP Section 3.2.1 - Following the execution of a contract for final design and construction, the design-build contractor will be responsible for all further actions to meet design-related commitments during its completion of the detailed design [1]. Design solutions developed, including mitigation and consultation procedures followed will be subject to review and approval by York Region staff. [2] The contract provisions will include a copy of the CMP and special contract provisions will be added to ensure commitments outlined in the CMP are fulfilled, including commitments to further studies and consultation as applicable	York Region / Contractor	Status – Completed [1] Contractor's Scope of Work 3.13.3 contains provisions for monitoring the requirements of the CMP. [2] Environmental monitoring is described in the Contractor's Environmental Management Plan.		Yes	Closed (2012)	
23.	CMP Section 3.2.2 - The Contractor will be responsible for meeting CMP requirements during construction. In accordance with stipulated contracting arrangements, the party contracted to carry out the construction will be required to meet all commitments related to the mitigation of construction effects [1] while the Region or its consultants will monitor the contractor's actions. [2]	York Region / Contractor	Status – Completed Contractor's Scope of Work 3.13.3 contains provisions for monitoring the requirements of the CMP. [1] Environmental monitoring is described in the Contractor's Environmental Management Plan.		Yes	Closed (2012)	
23A	CMP Section 3.2.3 – Once construction is complete and rapid transit service operations commence on the project, York Region will assume responsibility for monitoring the effects of operations and maintenance in accordance with the CMP requirements.	York Region	Status – Completed This is a general requirement. Monitoring will be via specific items in this table.		Yes	Closed (2014)

49.	Contaminated Soil	Chapter 11, Table 11.3-1, Proponent Response to Government Review Team Comments, Appendix F CMP I.D. # 7.1 - In the event contaminated sites are identified after construction activities begin, the contingency plan prepared to outline the steps that will be taken to ensure that contaminant release will be minimized and appropriate clean-up will occur. The site clean-up procedure of the plan compliance with the MOE's Brownfield's legislation and the Record of Site Condition Regulation (O.Reg. 153/04)[1]	York Region / Contractor	Status – Completed Contingency planning to address contaminated sites is part of the H3 work plan during the Detail Design phase. [1] Component Environmental Management Plan for Hazardous Waste Management is included in the Environmental Management Plan. Sites identified with potential contamination were investigated. Several sites were encountered and managed in accordance with the protocol. Final contaminated soils remediation reports for H3 sites (including details on material quantity, handling and disposal) are provided.		Contaminated Soils Remediation Reports (ID#2016-007, -008, -009, -010, -011	Yes	Closed (2016)	[1] Provided evidence supports the assertion that Contaminated Soils Remediation has been addressed.

				considered in the final design of this segment. Town of Richmond Hill was also be consulted [5].					
59.	Traffic and Pedestrian circulation and access during construction	EA Section 10.6 and Proponent's Response to Gov't Section 9.6 and Proponent's Response to Gov't Review Team Comments CMP I.D. # 14 - Development of a comprehensive Construction and Traffic Management Plan [i] including consultation with school board officials [ii] to ensure safe, uninterrupted access to schools affected by the works [iii].	York Region / Contractor	Status - Completed The H3 Scope of Work outlines that a Traffic Management Plan was submitted for review and approval by YRRTC and the local municipalities having jurisdiction. [1] Temporary traffic signal drawings (80302) were prepared as well as reports which address traffic impacts during construction. [2, 3] It was confirmed that there are no schools within the limits of the project which are accessed from Highway 7 within the H3 segment, therefore no consultation was required. Final paving on Town Centre Boulevard in Spring 2015 had an indirect impact on Unionville High School, and the school was consulted. [ii] TMP provided in 2012 (ID 9973). [2, 3] Regarding Town Centre Boulevard, arrangements were made to modify bus/student access during reconstruction in 2014.			Yes	Closed (2015)	
60.	Safety of traffic and pedestrian circulation and access during rapid transit operations	Section 9.6 and Government Review Team Comment response CMP I.D. # 15 - Infrastructure design features, built-in safety measures and	York Region	Status – Completed The DBCR includes provision for built-in safety features including station platform railings, station canopy rear wall, station canopy, station platform edge treatment and platform height, etc.[1] The DBCR indicates provisions to be made with respect to speed limit (DBCR Sections 2.0 BRT Standards,). [2]			Yes	Closed (2013)

Section 6.0 – Modifying the Design of the Undertaking					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
67.	<p>CMP Section 6.0 - In the event that there is a minor change to the design of the undertaking which does not adversely impact the expected net environmental effects of the undertaking, these changes will be considered minor and documented in the annual compliance report [1-8,9].</p> <p>CMP Section 6.0 – "... a required modification to the transitway alignment and station location in the area of the IBM campus in Markham has been identified. The modified alignment is a local refinement to the undertaking approved in the EA and an amendment report will be submitted specifically documenting the design modification."</p>	York Region	<p>Status- Completed</p> <p>Minor changes to the design of the undertaking during H3 PE Design have included:</p> <ul style="list-style-type: none"> - Minor changes to intersection approaches / configurations supported by the requisite traffic modelling.[1] - Minor reductions in general purpose lane widths.[2] - Minor adjustments to Rapidway alignments to minimise environmental impacts.[3] - Cross sections adjusted where possible to provide for bicycle lanes and maximize median green space.[4] - A single lane Rapidway with transit signal is proposed for the Highway 404 crossing. [5] - A Cedarland Alignment Modification Report has been finalised following receipt of MOE and TRCA comments – see Appendix 4 and 5 for monitoring.[6] - Additional median station provided at Times Avenue / Valley Mede Drive intersection.[7] - Minor change from 80km/h in some locations along Hwy 7 to 60 km/h throughout corridor[8] - Revision to the storm sewer design to eliminate a proposed outlet to the Rouge River [9] 		Yes	Closed (2015)	

Section 6.0 – Modifying the Design of the Undertaking					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
68.	CMP Section 6.0 - In the event that there is a change to the design of the undertaking that results in a material increase in the expected net environmental effects of the undertaking, the process set out in the CMP for modifying the design of the undertaking (including submission of an amendment report to the MOE) will be followed.	York Region	<p>Status – Complete</p> <p>An EA amendment report subtitled “Response to Conditions of Approval – Vaughan N-S Link Subway Alignment Optimization” was approved by the Minister of the Environment on April 4, 2008.</p> <p>No other changes requiring a major amendment have been identified during Detail Design. See also item 19 above.</p> <p>No changes requiring a major amendment have been identified during Detail Design, which is now complete.</p>		Yes	Closed (2015)	

Section 7.0 – Consultation					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
69.	CMP Section 7.1.1- One “Open House” format public consultation opportunity on completion of the preliminary design development work for each segment of the transitway planned for construction as a stand-alone component of the project implementation. The open house will take place at a location within the limits of the segment to be implemented and the design solution presented and modified as necessary to address public comment, will be the basis for the detailed design.	York Region	Status - Completed “Open House” format public consultations were held on June 17 & 18 2008 (Premiere Ballroom and Convention Centre - 9019 Leslie Street) and November 26, 2008 (Premiere Ballroom and Convention Centre - 9019 Leslie Street) during PE design. No design modifications were required to address public comments received at the “Open House” format public consultations. The contractor and YRRTC staff organized a meeting to present the design to the affected residents and property owners in an “Open House” format via pre-construction information centre.		Yes	Closed (2010)	
70.	CMP Section 7.2.1 - The findings of the Stage 2 Archaeological Assessment and any subsequent assessments will be circulated to all affected stakeholders and First Nations that have asked to be kept informed of the outcome of any archaeological investigations during the design [1,2] and construction phases [3].	York Region	Status – Completed A Stage 2 Archaeological Assessment was undertaken for the H3 segment and concluded that no additional archaeological assessment is required and these areas can be considered cleared with the exception of a Cemetery Investigation for Brown’s Corners Cemetery. The Cemetery Investigation found that all lands in the ROW can be considered clear of archaeological concern. The Ministry of Tourism and Culture accepted each of these findings. [1] Huron-Wendat First Nation of Wendake, Quebec was notified of the Stage 2 Archaeological Assessment findings via notification dated January 28, 2011 sent in French (the preferred language of communication) [2] Notice of the Stage 3 Archaeological Assessment findings were sent to the Huron-Wendat First Nation of Wendake, Quebec on May 30, 2011. [3] Construction is complete. No archaeological sites were found during construction.		Yes	Closed (2015)	
71.	CMP Section 7.2.1 - The Region and/or designate will consult and respond to First	York Region	Status- Completed See item #70 above		Yes	Closed (2011)	

Section 7.0 – Consultation					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
	Nations concerns regarding its findings on the Stage 2 Archaeological Assessment. The Region and/or designate will obtain any necessary approvals and conduct any additional studies that may be required as a result of the findings and recommendations of the Stage 2 Assessment.						
72.	CMP Section 7.2.2 - Notices of public consultation opportunities will be sent to First Nations that wish to be kept informed of the implementation of the undertaking. Should First Nations wish to be kept informed of the study and any additional work the Region will consult and notify First Nations in the manner in which they wish to be notified and/or consulted. This could vary from sending notices to attending meetings. [1]	York Region	<p>Status - Completed</p> <p>Hwy 7 EA Notice of submission of CMP for public review and comment.</p> <p>Notices of "Open House" format public consultation opportunities were provided through newspaper advertising.</p> <p>The H3 Detail Design Work Plan provides for notices of public consultation opportunities to First Nations that have expressed their wish to be kept informed of the implementation of the undertaking; and for circulation of the Stage 2 Archaeological Assessment Report to all First Nations that have asked to be kept informed of the outcome of any archaeological investigations during the design and construction phases.</p> <p>[1] See Item 70 above for notices to First Nations Construction is complete. No archaeological sites were found during construction and therefore no further consultation with First Nations was required. Also refer to Item 30.</p>		Yes	Closed (2015)	

Section 7.0 – Consultation					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during Construction	Compliance Document Reference	Status	Results	Notes
73.	CMP Section 7.1.2 - One "Open House" format public information centre prior to commencement of construction to present the construction staging and methods to be adopted including temporary works and methods to maintain traffic and pedestrian access and circulation, protect the existing natural and built environment and minimize noise, vibration and air pollution during construction	York Region / Contractor	Status – Complete A public meeting was held on March 23, 2011 in advance of construction.		Yes	Closed (2014)	
74.	CMP Section 7.1.2 - Availability of a "Community Relations Officer" throughout the construction period to provide information to, consult with and respond to complaints from, property and business owners and the general public. This Officer will prepare a protocol for dealing with and responding to inquiries and complaints during the construction and subsequent operation [1]. The protocol will be submitted to the MOE for placement on the Public Record prior to commencement of construction [2].	York Region / Contractor	Status – Completed Contractor's Communications Manager logs and tracks complaints and construction-related issues as per the developed Incident Management Protocol.		Yes	Closed (2013)	

Section 7.0 – Consultation					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during Construction	Compliance Document Reference	Status	Results	Notes
75.	CMP Section 7.1.3 – York Region Transit consults on a regular basis with the public through Open Houses at which they provide information on planned system expansion and modifications and respond to questions and complaints concerning existing operations. These forums will provide the opportunity to inform the public of the results of monitoring of EA commitments as well as to obtain feedback from the public on the effectiveness of environmental mitigation measures incorporated into the design and operations of the undertaking.	York Region	Status – Completed Engagement on the 2016 Transportation Master Plan is an example of ongoing consultation on planned system expansion and modifications and respond to questions and complaints concerning existing operations. The Consultation and Engagement Summary Report describes the engagement.	http://www.york.ca/wps/wcm/connect/yorkpublic/a6784d1f-14eb-483f-823c-653cebf12ab2/Background+Report+A.pdf?MOD=AJPERES	Yes	Closed (2016)	The evidence provided shows that York Region consults on planned system expansion.
76.	CMP Section 7.1.3 – At any time during operation of the undertaking, the public will have the opportunity to lodge complaints or make inquiries by contacting York Region Transit's Customer Service Representative by telephone or their e-mail contact service using the information provided on their website www.yrt.ca.	York Region	Status – Completed Complaints or inquires may be lodged by contacting York Region Transit's Customer Service Representative by telephone or their e-mail contact service using information provided on www.yrt.ca.	http://www.york.ca/wps/wcm/connect/yorkpublic/a6784d1f-14eb-483f-823c-653cebf12ab2/Background+Report+A.pdf?MOD=AJPERES	Yes	Closed (2015)	The website shows that York Region can be contacted by phone or email.

Section 8.0 – Program Schedule					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
76A	<p>CMP Sec 8: The CMP will be conducted during the implementation of all segments of the EA Undertaking.</p> <p>A preliminary schedule for each segment was provided in section 1. 1. Rapid transit operations will commence immediately after testing and commissioning of the systems and facilities.</p> <p>CMP activities programmed for each phase will be carried out throughout the implementation of the project and will continue during operations and maintenance until it can be verified that all commitments relating to operational effects have been met. It is anticipated that a stable operating environment will be reached within three years of the commencement date by which time monitoring activities will have confirmed compliance and as such, will no longer be necessary.</p> <p>Any commitments or conditions which require monitoring beyond the expected three year period will be verified at the appropriate time period during operations and the status of compliance will be recorded in the ACR.</p>		These items are reviewed and reported - SECTION 2.0 - MONITORING OF CONDITIONS OF APPROVAL` item 5.	N/A	Yes	Closed (2016)	

Section 9.0 - Submission and Circulation of the CMP					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
77.	CMP Section 9.0 - In order to fulfill the Condition of Approval requiring submission of a CMP, this document [CMP] is submitted to the Director of the Environmental Assessment and Approvals Branch (EAAB) of the Ministry of the Environment for review and approval.	York Region	Status – Completed CMP submission requirements addressed with the approval of the CMP. The final CMP was submitted to the Acting Director, Environmental Assessment and Approvals Branch on August 18, 2008 and approved on December 29, 2008.		Yes	Closed (2009)	
78.	CMP Section 9.0 - Following approval it [CMP] will be provided to the Director for filing with the Public record maintained for the undertaking. Accompanying the CMP submitted to the Director will be a statement indicating that the CMP is intended to fulfill Condition 3 of the Conditions of Approval.	York Region	Status – Completed CMP submission requirements addressed with the approval of the CMP. The letter of submission includes a statement indicating that the CMP is intended to fulfill Condition 3 of the Conditions of Approval.		Yes	Closed (2009)	
79.	CMP Section 9.0 - Additional copies [following approval] will be provided by the Proponent for public access as specified in condition of approval 2.1.	York Region	Status - Completed Refer to item 7 of this document.		Yes	Closed (2014)	
80.	CMP Section 9.0 - The CMP will be made available to agencies, affected stakeholders and/or members of the public [1,2] who expressed an interest in activities being addressed in the CMP or being involved in subsequent work [3].	York Region	Status – Completed Condition addressed with the approval of the CMP and circulation to affected/interested stakeholders.		Yes	Closed (2011)	
81.	CMP Section 9.0 - Copies of the CMP will be provided to those agencies/interested groups identified in Table 11.3-1 of the EA. A notice will be sent to all other agencies involved during the EA and to other stakeholders who identified an interest by providing comments during public review of the EA or EA review. The notice will advise that the CMP is	York Region	Status – Completed Condition addressed with the approval of the CMP and circulation to affected/interested stakeholders.		Yes	Closed (2009)	

Section 9.0 - Submission and Circulation of the CMP					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
	available on the Region's website or hard copy on request. A copy of the stakeholder list will be provided to MOE for the public record submission of the CMP and subsequent ACR's.						
82.	CMP Section 9.0 - The CMP will be available for public information on the Proponent's website at www.vivayork.ca	York Region	Status - Completed The CMP is posted on www.vivanext.com		Yes	Closed (2010)	

Section 10.0 – Annual Compliance Report					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
82-A	<p>CMP Sec 10: The ECM will prepare an Annual Compliance Report (ACR) which describes the results of the Compliance Monitoring Program during the year preceding the submission of each ACR. A copy of the ACR will be submitted to the Directors of the Environmental Assessment and Approvals Branch and Central Region for placement on the Public Record.</p> <p>The first ACR will be submitted in June 2009 with subsequent submissions in December of each year thereafter until the construction of the undertaking is complete and the rapid transit service has been operated for at least three years after the last segment is constructed.</p> <p>The ACR's may include adjustments to Tables 5.1, 5.2 or 5.3 of the CMP to accommodate any additional environmental effects or EA commitments which may have been inadvertently missed or which were revised and need to be monitored for compliance.</p>		These items are reviewed and reported - SECTION 2.0 - MONITORING OF CONDITIONS OF APPROVAL` item 12.	N/A	Yes	Closed (2016)	

Section 11.0 - Other Documents required by the Conditions of Approval					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
83.	Ridership Monitoring Program: CMP Section 11.1 - York Region will prepare the results of its Ridership Monitoring Program [1] as committed in Section 5.2.2.3 of the EA and EAA Condition 4.1. The Ridership Monitoring Program will be provided to the City of Toronto, GO Transit, Ministry of Transportation, TTC, the Towns of Markham and Richmond Hill and the City of Vaughan for review [2].	York Region York Region Transit	Status [1]- Ongoing The proposed major review in 2012 outlined in Section 5.2.2.3, Step 3 of the EA is based on the rapid transit improvements "Network Alternative A1" being constructed and operating by 2010. Funding timing has resulted in implementation later than planned at the time of the EA (2013-2019 on the funded Highway 7 segments), therefore a major update in 2012 is no longer relevant. As per Condition 4.1, the Ridership Monitoring Program is tied to the Technology Conversion Plan described in Item 82, which is not being progressed at this time. Section 5.2.2.3 noted a review of ridership for the Highway 7 rapid transit system described in the EA two years following implementation, to encompass three years before and two years after commencement of service. The Highway 7 rapid transit system will not be fully implemented for many years. The H3 segment will be completed in early 2015, and therefore the detailed review of this corridor is in early 2017, and will be provided to the stakeholders noted. Ridership data is being collected monthly and will be input to that review. YRT/viva monitors transit ridership on an ongoing basis and reports to York Region Committee of the Whole periodically (monthly or quarterly).		Yes	EF	The both documents provided supports the assertion that ridership statistics are kept.
84.	Technology Conversion Plan CMP Section 11.2 - A Technology Conversion Plan will be prepared to identify when and if conversion from a bus rapid transit (BRT) system to a Light Rail Transit (LRT) system will occur [1].	York Region	Status – Completed See item 13. Technology conversion plan will not be prepared prior to 2041.		Yes	Closed (2016)	Item 13 explains this item closure.
85.	CMP Section 11.2 - If conversion is found	York Region	Status: Dose not apply		Yes	Closed	

Section 11.0 - Other Documents required by the Conditions of Approval					Compliance Review		
Item	Mitigation Measure / Commitment to be Monitored	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
	to be required prior to 2021, the Plan will include an implementation schedule.		As per item #13, conversion is not required before 2021			(2016)	
86.	CMP Section 11.2 - The Ridership Monitoring Program[1] and Technology Conversion Plan[2] will be placed on the public record file at the EAAB and the MOE's Central Regional Office. A copy of these documents will also be provided to the City of Toronto, TTC, GO Transit, the Ministry of Transportation, the Towns of Markham and Richmond Hill and the City of Vaughan for review.	York Region York Region Transit	Status –Completed [1] Revenue Ridership Summary was provided in 2007. [2] The potential future evolution from Bus Rapid Transit to higher capacity Light Rail Rapid Transit is not being planned at this time, and is ultimately dependant on significant growth in transit ridership and available funding in the future, and at least not expected within the 2041 horizon (see Item #13). The Technology Conversion Plan will not be finalized within the next 20+ years. This items is closed.		Yes	Closed (2016)	Item 13 explains this item closure.
87.	Complaints Protocol CMP Section 11.3 - Prior to construction, the Region will prepare a protocol on how it will deal with and respond to inquiries and complaints received during the construction and operation of the undertaking [1]. The protocol will be submitted to the Central Region Director for placement on the Public Record [2].	York Region	Status - Completed The protocol will be prepared during the Detail Design phase. A Complaint Protocol will be developed during Detail Design and will be submitted to the required agencies for review and comment. [1] Complaints Protocol developed as part of the Incident Management Protocol.		Yes	Closed (2011)	

Appendix 1 Highway 7 Corridor And Vaughan North-South Link Public Transit Improvements EA - Table 10.4-1 Effects and Mitigation for Mobility											Compliance Monitoring			Compliance Review				
GOAL	Environmental Value/ Criterion	Environmental Issues/Concerns	Project Phase ¹			Location	Potential Environment Effects	Proposed Mitigation Measures			Level of Significance after Mitigation	Monitoring and Recommendation	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE A: To improve mobility by providing a fast, convenient, reliable and efficient rapid transit service																		
A1 (a)	Maximize Inter-regional and local transit connectivity	Connections to inter-regional services and future gateways	✓		✓	Highway 7 & Highway 50	Opportunity to connect to a Brampton Rapid Transit Initiative "AcceleRide" to improve the inter-regional transit network.	Highway 7 Transitway will provide a direct connection from western York Region to the Region of Peel. It also provides a direct connection from York University to the Region of Peel.	Increased potential for infill development around the regional boundary.	None	Positive effect	Monitor the ridership and the performance of the connection to the Region of Peel.	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	
(b)		Connections to inter-regional services and future gateways	✓		✓	At 400 series highways, e.g. Highways 427, 400, 404 & 407	Opportunity to connect to MTO's future rapid transit services on the 400 series highways to improve the inter-regional transit network.	Highway 7 Transitway will provide additional stations for transfers.	Increased potential for infill development around these transfer points.	None	Positive effect	Monitor the ridership and the needs to provide additional stations as warranted by the future rapid transit services.	York Region	Status –Completed Opportunities to connect to MTO's Highway 407 Transitway at the Richmond Hill Centre have been explored through the Yonge Subway Extension and Highway 407 Transitway Transit Project Assessments. No additional stations added during H3 Design for the purpose of connections to inter-regional services and future gateways. Ridership monitoring is ongoing. See item 83 of this document. This item is closed as no further updating is warranted.		Yes	Closed (2016)	See item 83
(c)		Connections to inter-regional services and future gateways	✓		✓	York University	Opportunity to connect to the City of Toronto and improve ridership on these transit services.	Vaughan North-South Link will provide a direct connection to the York University and the future TTC rapid transit connecting the Toronto system prior the implementation of the subway extension.	Increased potential for infill development around this transfer point.	None	Positive effect	Monitor the ridership and the performance of the connection to Toronto.	York Region	Status – Does not apply to H3 segment Ridership monitoring is ongoing. See item 81 of this document.		Yes	Closed (2014)	

Appendix 1 Highway 7 Corridor And Vaughan North-South Link Public Transit Improvements EA - Table 10.4-1 Effects and Mitigation for Mobility											Compliance Monitoring			Compliance Review				
GOAL	Environmental Value/ Criterion	Environmental Issues/Concerns	Project Phase ¹			Location	Potential Environment Effects	Proposed Mitigation Measures			Level of Significance after Mitigation	Monitoring and Recommendation	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE A: To improve mobility by providing a fast, convenient, reliable and efficient rapid transit service																		
A1 cont'd (d)		Connections to inter-regional services and future gateways	✓		✓	Proposed Richmond Hill Centre Intermodal Station	Better connection to GO Stations and future provincial inter-regional 407 Transitway station will improve ridership on all transit services	Highway 7 Transitway will provide a direct connection to GO Rail's Richmond Hill Line at the proposed Richmond Hill Centre Intermodal Station. It will also have a connection to York's Yonge Street Transitway and the future provincial transit corridor along Highway 407.	Increased potential for infill development around Richmond Hill Centre Intermodal Station	None	Positive effect	Monitor ridership and the performance of the connection to GO Langstaff Station	York Region	Status – Does not apply to the H3 segment.		Yes	Closed (2014)	
(e)		Connections to inter-regional services and future gateways	✓		✓	Unionville GO Station	Connection to Unionville GO Station will improve York's transit network.	A pedestrian walkway will be provided to transfer the transitway passengers to the Unionville GO Station. This will provide a fast and reliable service from the future Markham Centre to the City of Toronto or northern York Region via the GO Rail's Stouffville Line.	Increased potential for infill development around this transfer point.	None	Positive effect	Monitor the ridership and the performance of the connection to Unionville GO Station.	York Region	Status – Does not apply to the H3 segment PE Design of the connection to Unionville GO Station has not yet commenced. Ridership monitoring is ongoing. See item 81 of this document. Unionville GO Station is not within the limits of the H3 Segment.		Yes	Closed (2015)	

Appendix 1 Highway 7 Corridor And Vaughan North-South Link Public Transit Improvements EA - Table 10.4-1 Effects and Mitigation for Mobility										Compliance Monitoring			Compliance Review

			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE A: To improve mobility by providing a fast, convenient, reliable and efficient rapid transit service																		
(f)		Compatibility with proposed local network	✓		✓	Entire Corridor	Inconvenient transfer between local transit and Highway 7 Rapid Transit may discourage transit ridership.	Stations generally located on north-south local transit routes ensuring convenient transfers between services. Integrated fare system proposed.	The project may change the configuration of local transit.	Local services configured as grid where practical, to provide both community coverage and feeder roles	Positive effect	Regular review of the effectiveness of local service plans.[1]	York Region	Status – Complete Regular review of the effectiveness of local service plans is an ongoing YRT task. YRT evaluates local service connections and implements network changes annually. Review of the effectiveness of local services plans regarding growth of transfers and response to customer requests/complaints is managed by York Region and are included in the York Region Transit 5 year service plan.		Yes	Closed (2015)	

Appendix 1 Highway 7 Corridor And Vaughan North-South Link Public Transit Improvements EA - Table 10.4-1 Effects and Mitigation for Mobility											Compliance Monitoring			Compliance Review				
GOAL	Environmental Value/ Criterion	Environmental Issues/Concerns	Project Phase ¹			Location	Potential Environment Effects	Proposed Mitigation Measures			Level of Significance after Mitigation	Monitoring and Recommendation	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE A: To improve mobility by providing a fast, convenient, reliable and efficient rapid transit service																		
A2 (a)	Maximizes speed and ride comfort and minimizes safety risks and maintenance costs with optimized alignment geometry.	Grade at the station in excess of LRT standard of max. 1.0%.	✓		✓	Eastbound platform on Highway 7 at Chalmers Rd./ South Park Rd.	Running way grade at platforms is 2.49%. LRT should have the minimum climbing grade after stopping to load/unload passengers.	Grade through the station will have to be modified locally resulting in a vertical separation from adjacent traffic lanes if LRT technology is introduced.	Minor retaining walls through the station.	Incorporate safety barriers where required.[1]	Significant		York Region	Status – Completed H3 PE Design was undertaken for a BRT service so as not to preclude a future LRT service – redesign running away as required once LRT is needed. [2011]The platform at this intersection is designed at 1.5% and may require future modification if LRT technology is introduced. The same design approach was carried through Detail Design. The Eastbound platform grade is designed at 2.15%. Architectural record drawings show barrier wall and safety railings to separate pedestrians on platforms from adjacent traffic lanes and accommodate step in the canopy to accommodate grade difference. The need for grade adjustments and minor retaining walls will be assessed in future if LRT conversion is considered.		Yes	Closed (2014)

OBJECTIVE A: To improve mobility by providing a fast, convenient, reliable and efficient rapid transit service																		
A4	Increase attractiveness of rapid transit service	Travel time and service reliability	✓		✓	Entire Corridor	Adjustments to signal timing to achieve progression and minimize delay to rapid transit.	Micro-simulation of rapid transit operation and general traffic movements during detailed design will be used to optimize signal timing. Transit speed will be increased to maximum achievable with reasonable intersection operation.[1]	Delay in transit or intersecting traffic may be unacceptable. May affect intersection capacity for general traffic movements.	Modification of intersection signal timing.	Moderately significant	Pursue an on-going intersection performance monitoring program [2]	York Region	Status - Completed [1] Section 3.3.6 of the DBCR Traffic Analysis - A VISSIM microsimulation traffic model was used to simulate traffic flows not only at the traffic signal junctions but also through the links of the traffic system. The model was used to assess the impacts of traffic conditions on transit vehicles as they progressed through the Rapidway [1] Section 3.1.3 of the DBCR – Traffic Signal Technology – controlled transit priority at all major intersections [2] York Region continues to monitor and undertakes a signal coordination review along this corridor every 2-3 years.		Yes	Closed (2015)	
A5	Locate stations to maximize ridership potential and convenience of access for all users	Residents/Employees within walking distance of station locations. Accessibility of stations/transit system.			✓	Entire Corridor	Stations at locations with automobile-oriented land use could discourage rapid transit use.	Station locations selected to serve supportive land use. Facilities designed with weather protection, direct barrier-free access, and attractive streetscapes within surrounding residential neighbourhoods.	Continued dependence on automobile if land use objectives not achieved	Greater emphasis on supportive land use	Positive effect	Regular review of land use and new or infill development potential during detailed design phases for transitway and stations.	York Region	Status – Completed York Region has developed guidelines for assessing potential locations for new Viva stations. No new development applications have been received for the H3 corridor during the detailed design (design/build) phase.	YRT/Viva 2015 Annual Service Plan, Sept 2014 – Section 3, Transit Service Guidelines, page 36 (ID YH3-2015-007)	Yes	Closed (2016)	The evidence support the assertion.

OBJECTIVE B: To protect and enhance the social environment in the corridor																		
B2 cont'd (ad)					✓	Bayview Avenue Connection Ramp	The requirement for transit to transition to mixed-traffic complicates the intersection operation.	[1] A ten-second transit phase will be provided.	EBT will approach capacity in the AM peak hour.	[2] The implementation of a dual EB left turn and split phasing for pedestrians should be considered during the detailed design phase.	Moderately Significant	[2] Evaluate option of implementing a dual eastbound left turn lane and/or review opportunity to provide split phasing for pedestrian.	York Region	Status – No action required The H3.1 segment from Yonge Street to Bayview Avenue has not yet started Detail Design. Preliminary Design called for this segment to operate BRT in mixed traffic. Turn lanes will be evaluated in Detail Design. Detailed Design has determined that BRT will operate in mixed traffic on Bayview Avenue[2]. Transit will transition to mixed traffic at a mid-block location east of Bayview. Therefore this intersection will remain in its existing configuration. Therefore, no further action is required.		Yes	Closed (2013)	
(ae)					✓	South Park Drive/Chalmers Road	The requirement for transit to transition to mixed-traffic complicates the intersection operation.	[2] A ten-second transit phase will be provided.	E-W phase will operate at capacity during the PM peak hour. The EBL & WBT will operate at capacity.	[1] Pedestrian split phasing should be considered.	Moderately Significant	Monitoring required for pedestrian split phasing.[3]	York Region	Status – Complete [2011 ACR] Median station provides the opportunity for pedestrian split phasing. Two-stage pedestrian crossing operation along with protected only left turn phases on Highway 7 have been implemented.[1] Split phasing for pedestrian has been implemented and shown on Permanent Traffic Signals drawings.[1] The transition occurs west of the Chalmers/South Park station. Therefore signal priority does not offer an advantage for bus transition. The transition		Yes	Closed (2014)

OBJECTIVE B: To protect and enhance the social environment in the corridor																		
													operation has been managed through pavement markings and signage, including a flashing amber beacon in the WB direction. [2] [3] Since two stage pedestrian crossings (aka split phasing) have been implemented at this location, further monitoring is not required.					
B2 cont'd (af)	Maintain or improve road traffic and pedestrian circulation (cont'd)	Reduction in main street intersection capacities due to rapid transit operations (cont'd)			✓	Leslie Street	WBL, SBL, EBL, EBT & NBL will operate at capacity or approach capacity in the AM & PM peak hours. The N-S movements will require a minimum split of 49 s to serve pedestrian crossing times. Long-term conditions expect high vehicular volumes in all approaches. Additional road improvements are insignificant due to high traffic demands from Highway 404 and surrounding future development.	Improvements are not possible due to land/ grade constraints or would not improve operating conditions due to excessively high volumes. Minor remedial measures are not possible such as dual left turn lanes or signal modifications.	The intersection will continue to operate at capacity.	Opportunities to reduce the minimum N-S split, such as a 2-stage pedestrian crossing, should be pursued as other critical phases require the additional green time[1].	Moderately Significant	None required.	York Region	Status – Complete Split phasing for pedestrian has been implemented and shown on Permanent Traffic Signals drawings.[1]		Yes	Closed (2013)	
(ag)					✓	East Beaver Creek/	EBL & WBL will operate at capacity due to the	Improvements are not possible due to land/ grade constraints or would not improve operating	The intersection will continue to operate at	None expected	Significant	A two-stage pedestrian crossing should be	York Region	Status – Complete Split phasing for pedestrian has been implemented and shown		Yes	Closed (2013)

OBJECTIVE B: To protect and enhance the social environment in the corridor																		
						Commerce Valley Drive East	protected-only phases. The reduction in east-west capacity is mainly attributed to the additional north-south green time required to accommodate pedestrians. Heavy volumes and proximity to the Highway 404 interchange result in capacity conditions with minimal improvement from minor remedial measures.	conditions due to excessively high volumes. Minor remedial measures are not possible such as dual left turn lanes or signal modifications.	capacity.			considered at the Commerce Valley Drive intersection to reduce side street green time demands. [1,2,3]		on Permanent Traffic Signals drawings.				
B2 cont'd (ah)					✓	Highway 404 N-E/W Ramp	The requirement for transit to transition to mixed-traffic complicates the intersection operation.	The WB transit vehicles will be given a green indication in conjunction with the WB traffic [1]. A ten second EB transit phase will be provided [2]. The WBT will be permitted during this phase [3]. Upstream & stop bar detection of the transit vehicle will be provided to allow the controller with advance warning and confirmation that a transit vehicle requires the advance transit phase.[4]	Overall peak hour operations are not impacted. Transit delay between the two transition intersections is expected.	Should the resultant delays to transit vehicles be considered excessive,, transit vehicle priority could be employed at both the transition intersections to advance the traffic signal display in anticipation of the arrival of the transit vehicle.	Moderately Significant	Review the need to provide transit vehicle priority.[5]	York Region	Status – No action required A single lane Rapidway with transit signal is proposed for the Highway 404 crossing. Report recommending single reversible direction lane under 404 currently under review by MTO and Region. The final design incorporates a separate transit-only signal with a waiting area to control the reversible operation on the transit lane under Highway 404. Therefore, transit signal priority is not required. Therefore, this requirement is no longer applicable.	Yes	Closed (2013)

			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE B: To protect and enhance the social environment in the corridor																		
B6 Cont'd (b)		Visual Effects	✓		✓	Hwy 404 interchange	If necessary in the future, achieving a dedicated transitway through the interchange by adopting an elevated solution could have an adverse effect on vistas in the area.	Initially, the option of lengthening the span of the existing interchange bridges will be analyzed and only if found impractical under traffic operations, will an elevated solution be developed. This design can be made visually acceptable given the surrounding highway interchange environment and the remoteness of adjacent land uses from which vistas may be degraded.	The overall height of the interchange works would be increased to that of the neighbouring Highway 407 interchange.	None	Insignificant if span lengthening is adopted. Moderately significant if elevated design is required.	Monitor the level of traffic congestion affecting the reliability of the preferred mixed traffic operation to assess the effectiveness of the planned new Hwy 404 road overpass north of the interchange.	York Region	Status –Completed Preliminary and Detail Design do not recommend implementation of elevated solutions at this time. A single lane Rapidway with transit signal is proposed for the Highway 404 crossing.		Yes	Closed (2009)	
(c)	Minimize disruption of community vistas and adverse effects on street and neighbourhood aesthetics (cont'd)	Landscaping	✓		✓	Entire Corridor	Landscaping species may not survive in winter months	Choose appropriate species for both winter and other months to maintain greenery throughout corridor. Place landscaping in planters and incorporate buried irrigation systems.	Species may still not survive	Change species, irrigation patterns, etc.[1]	Insignificant	Monitor health of landscaping continuously [2]	York Region	Status – Completed H3 Design addresses sustainability of landscape features and a greater degree of greening – e.g. Section 4.21 of the DBCR. [2011] H3 Detail Design planting plan[1] incorporates only plant species that are hardy in this location. In addition, all plant species specified are salt and drought tolerant. [2] York Region has contracted staff for inspection, maintenance and watering of the streetscape plantings.			Closed (2015)	
(d)		Encroachment on sites of existing buildings		✓	✓	Immediately west of Leisure Lane, south side	Modification of alignment is required to avoid the south building	Alignment shifted up to 2.3 m to the north	South building setback restored; internal parking required rearranging.	None	Insignificant	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 1 Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements EA - Table 10.4-2 Effects and Mitigation for Social Environment												Compliance Monitoring			Compliance Review			
GOAL	Environmental Value/ Criterion	Environmental Issues/Concerns	Project Phase ¹			Location	Potential Environment Effects	Proposed Mitigation Measures			Level of Significance after Mitigation	Monitoring and Recommendation	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE B: To protect and enhance the social environment in the corridor																		
B6 Cont'd (e)		Encroachment on sites of existing retaining walls		✓	✓	Between Islington Ave. and Bruce Street, north side	Relocation of existing retaining walls holding up residential properties would be required with the existing alignment.	Alignment shifted up to 2.8 m to the south	North retaining walls remain intact.	None	Negligible	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	
(f)		Encroachment on sites of existing property		✓	✓	In the proximity of Whitmore / Ansley Grove Roads	Additional road width required accommodate station platforms would result in property encroachment solely on the south side.	Alignment shifted up to 3.8 m to the north	Property impact on both sides becomes similar.	None	Insignificant	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	
(g)		Encroachment on sites of existing buildings		✓	✓	Northwest of Weston Rd. & Hwy 7	Additional road width required accommodate station platforms would result in removal of NW building. Modification of alignment is required.	Alignment shifted up to 4.7 m to the south	Encroachment to the NW building is avoided.	None	Negligible	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 1 Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements EA - Table 10.4-2 Effects and Mitigation for Social Environment											Compliance Monitoring			Compliance Review

			P	C	O			Built-In Positive Attributes and/or Mitigations [A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE B: To protect and enhance the social environment in the corridor																		
(h)		Encroachment on sites of existing property		✓	✓	Northwest of Town Centre Boulevard & Hwy 7	The NW is being developed and the future buildings will be constructed very close to the existing north ROW such that property negotiation is not feasible. Modification of alignment is required.	Alignment shifted up to 7.0 m to the south. Agreement has been made with the developer that they will grade YRTP's proposed sidewalk at the limit of ROW.	Property impact on the north side is avoided.	None	Insignificant	None Required	York Region	Status – No Action Required		Yes	Closed (2014)	
(i)		Encroachment on sites of existing building		✓	✓	Southwest of Clegg Rd. & Town Centre Boulevard	Encroachment to the existing SW building would be required.	Alignment shifted up to 4.1 m to the east.	Encroachment to the SW building is avoided.	None	Negligible	None Required	York Region	Status – No Action Required		Yes	Closed (2014)	
(j)		Encroachment on sites of existing property		✓	✓	Between Bullock Dr. and McCowan Rd., north side	North property would be subjected to greater property impact than the south.	Alignment shifted up to 1.2 m to the south.	Property impact on the north side is minimized.	None	Moderately significant	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	
B6 Cont'd (k)		Encroachment on sites of existing property		✓	✓	Northeast of Robinson Street/ Jolyn Road and Hwy 7	Encroachment to existing fenced residential property would be required.	Alignment shifted up to 3.5 m to the south and retaining walls along the limit of north ROW are introduced.	Property impact on the north side is avoided.	None	Insignificant	None Required	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)

													inspected annually for sediment accumulation, servicing and cleaning.					
C1 cont'd (d)		Loss of site-specific habitat.		✓		All watercourses within entire corridor.	Potential loss of fish habitat as a result of new culverts/bridges, culvert/bridge extensions and/or culvert/bridge replacements or repairs.	Design transitway cross-sections to avoid modifications at culverts/bridges. Span meander belt or 100-year erosion limit of the watercourse. Avoid in-water work to the extent possible.	A harmful alteration of fish habitat will likely result from culvert modifications at approximately 25 culverts that convey watercourses that support fish habitat.	Negotiations with regulatory agencies during detail design [2]. Compensate for the harmful alteration of fish habitat. [3]	Insignificant	On-site environmental inspection during in-water work. [4] Post-construction monitoring of fish habitat compensation measures.[5]	York Region	Status - Completed [2] No HADD was identified during the Detail Design [3] At a meeting on June 24, 2010, TRCA staff indicated that, based on the information provided, the effects of the proposed works in these segments could be mitigated and that consequently, a Letter of Advice would be acceptable, since a HADD should not result at any crossing. [1,4] Contractor's Environmental Management Plan addresses methodology for in-water work activities. [1,4] Weekly Environmental Checklist demonstrates how in-water constructing timing restrictions have been monitored and generally how on-site environmental inspection during in-water work has been documented (Refer to Sections 2.0, 3.1,3.2, 4.1, .4.3). Timing restrictions are specifically addressed in 4.3 (i). [2] Letters of Advice prepared by TRCA on	[5] Apple Creek Restoration 2015 Monitoring Results 2016-01-13	Yes	Closed (2016)	Items [1-4] Closed .Item [5] : Apple Creek Restoration 2015 Monitoring Results 2016-01-13 provides enough support for Post-construction monitoring of fish habitat compensation measures..

			P	C	O			Built-In Positive Attributes and/or Mitigations[A]	Potential Residual Effects	Further Mitigation								
OBJECTIVE C: To protect and enhance the natural environment in the corridor																		
													in previous years KED Environmental would be on-site to ensure there were no stranded fish, this was documented in the Weekly Environmental Checklist. Fish salvages were not required during construction as 100% dewatering of any watercourses did not occur. In some instances KED would contract a 3rd party consultant to oversee sensitive operations, and ensure that all works were carried out in accordance with all permits and Environmental Work Plans (EWPs).					
(f)		Barriers to fish movement.		✓	✓	All watercourses within entire corridor.	Culvert/bridge extension, repair or replacement may create a barrier to fish movement.	Use open footing culverts or countersink closed culverts a minimum of 20% of culvert diameter. Span the watercourse, meander belt or floodplain with new structures where warranted by site conditions. [2]	Culvert extensions will be designed to avoid the creation of a barrier to fish movement.	Negotiations with regulatory agencies during detail design.[1]	Negligible	On-site environmental inspection during in-water work. [2]	York Region	Status-completed [[2] Protection for fish movement was reviewed and approved through the TRCA permit application process. See Item #38 for permit listings. [1]TRCA has approved the following permits: <ul style="list-style-type: none"> ▪ CV1 (German Mills east of Pond Dr.) on July 28, 2011; ▪ CV2 (German Mills west of Hwy 404) on August 15, 2011; ▪ Beaver Creek on January 4, 2012; ▪ Revision to Beaver 		Yes	Closed (2012)

													consultant to oversee sensitive operations, and ensure that all works were carried out in accordance with all permits and Environmental Work Plans (EWPs). [5,6] Weekly Environmental Checklist section 4.1 ii) verifies that heavy equipment is prohibited from entering watercourses.					
C2 (a)	Minimize adverse effects on Terrestrial Ecosystems	Loss of wildlife habitat and ecological functions		✓	✓	Entire corridor.	Construction of the transitway and associated facilities may result in the removal of vegetation and ecological functions it supports.	Minimize the area of vegetation removals to the extent possible.[1] Minimize grade changes to the extent possible.[2] Use close cut clearing and trimming to minimize the number of trees to be removed.[3] Delineate work zones using construction fencing/tree protection barrier.[4] Protect trees within the clear zone using guiderail, curbs, etc. to prevent removal.[5]	None expected.	Restore natural areas disturbed using construction with native vegetation, where feasible [6]. Replace ornamental vegetation as part of landscaping [7].	Negligible	None required.	York Region	Status – Completed [2011 ACR][1,3, 4,6] A Tree Preservation Report for the Corridor has requirements for minimizing impacts to vegetation and trees. An Environmental Control Plan was developed during Detail Design. [2] [2011 ACR]Landscaping design was be finalized in 2012 [7]. [1,3,4,6]Tree Preservation drawings and Arborist Report completed. Landscaping design completed [7]. Weekly Environmental Checklist section 4.4 Municipal Compliance [4].		Closed (2014)		
C2 cont'd (b)		Wildlife mortality		✓	✓	Entire corridor.	Removal of wildlife habitat may result in wildlife mortality.	Perform vegetation removals outside of wildlife breeding seasons (typically April 1 to July	None expected.	None required.	Negligible	None required.	York Region	Status – Completed An Environmental Control Plan will be developed during Detail Design[1] and	Yes	Closed (2015)

							31). [i] [1,2] Perform culvert/bridge extension, repair and replacement outside of wildlife breeding season [ii]. [1,2]							bird nest surveys conducted prior to construction as required.[2] Wildlife breeding windows are communicated to contractor staff members through lunch and learn training [1] Weekly checklist to be revised as per the comments [2] [2] Weekly Environmental Checklist was revised to address the comments				
(c)		Barriers to wildlife movement and wildlife/vehicle conflicts		✓	✓	Entire corridor	Culvert/bridge extension, repair or replacement may create a barrier to wildlife movement. Increase in width of Highway 7 to accommodate transitway and associated facilities may create an additional impediment to wildlife movement and increase the potential for wildlife/vehicle conflicts. New crossings at Upper Rouge River	Maintain or enhance riparian corridors and terrestrial wildlife passage under new/ realigned bridges. New or modified culverts and bridges [2] will be investigated during preliminary and detail design to identify opportunities to promote wildlife passage. Methods to enhance wildlife passage such as increasing vertical and horizontal clearances, drift fence, dry benches, etc. will be taken into consideration.	Transitway represents an incremental increase in road width compared to existing barrier created by Highway 7. Required culvert extensions will not impede wildlife passage under Highway 7.	Use of existing culverts/bridges maintains wildlife passage under transitway and does not offer opportunities to enhance wildlife passage.	Insignificant at new/ realigned bridges with appropriate mitigations	None required.	York Region	Status –Completed Existing culverts/bridges used maintaining wildlife passage under transitway[1]. There are no new or realigned culverts or bridges within the H3 segment. Permits were issued by TRCA for 4 culvert extensions and 2 bridge widening. The permit documents, included in Item 41, indicate design details and mitigation measures.	Yes	Closed (2014)

OBJECTIVE C: To protect and enhance the natural environment in the corridor																		
						& Rouge River Tributary 4 may create a barrier to wildlife movement.												
(d)		Wildlife/vehicle conflicts			✓	Entire corridor.	Increase in width of Highway 7 to accommodate transitway and associated facilities may increase the potential for wildlife/vehicle conflicts.	Span bridges across the meander belt. Use oversized culverts to promote wildlife passage under the road. Stagger culvert inverts to create wet and dry culverts.	Transitway represents an incremental increase in road width compared to existing hazard to wildlife created by Highway 7.	None required.	Insignificant	None required.	York Region	Status - No Action Required		Yes	Closed (2014)	
C2 cont'd (e)		Disturbance to rare, threatened, or endangered wildlife		✓	✓	Entire corridor.	Three rare species were identified within the study area: rough-legged hawk (non-breeding migrant/vagrant, extremely rare breeding occurrence by MNR); northern shrike (non-breeding migrant/vagrant, very rare to uncommon breeding occurrence by MNR); and, milk snake ('special concern' by COSEWIC, and 'rare to uncommon' by MNR)	Prevent the harassment of eastern milk snake if encountered during construction. [1] Perform vegetation removals outside of wildlife breeding seasons (typically April 1 to July 31). [2] Perform culvert/bridge extension, repair and replacement outside of wildlife breeding season. [2,3]	None expected.	None required.	Negligible	None required.	York Region	Status - Completed An Environmental Control Plan was developed during Detail Design and bird nest surveys was conducted prior to construction as required. [2,3] Wildlife breeding windows are communicated to contractor staff members through lunch and learn training [2,3] Weekly Environmental Checklist was revised as per comments		Yes	Closed (2015)	
(f)	Minimize adverse effects on Terrestrial Ecosystems	Disturbance to vegetation through edge effects, drainage modifications and road		✓	✓	Entire corridor.	Clearing of new forest edges may result in sunscald, windthrow, and	Minimize the area of vegetation removals to the extent possible. [1]	Vegetation communities within the study area are primarily cultural in	Landscape treatments. [7]	Insignificant	None required.	York Region	Status - Completed An Environmental Control Plan was developed during		Yes	Closed (2015)

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
Ministry of the Environment – Technical Support	Mr. Ernie Haritt, Supervisor – Air, Pesticides and Environmental Planning Central Region	1	a) Section 8.3.2 – In this section, Alternative B1 is identified as preferred, noting that this alternative will attract the highest ridership on east-west Hwy 7 service, contradicting the evaluation findings in Table 8.3-1 which indicate that this alternative “circuitous route to York U for trips from the east reduces Hwy 7 service daily boardings by 7-10%. Clarification should be obtained to ensure that the increased capital costs and increased potential for environmental impacts associated with the selection of Alternative B1 are justified based on the broader goals and objectives of this undertaking.	a) Section 8.3.2.4 of the EA report indicates that the preferred alternative is a combination of Alternative B1 and continuation of the partially-segregated Phase 1 Keele St service. This combination has the highest potential to attract ridership to both major destinations, Vaughan Corporate Centre (VCC) and York University, thus overcoming the primary disadvantage of Alternative B1 alone while gaining some of the benefits of Alternative B2.	York Region	a) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			b) Section 8.3.4.2 – The alternative alignments under consideration were evaluated using an analysis of the advantages and disadvantages of the various options (Table 8.3-4). This approach is not consistent with the approach used for the evaluation of other segments which consider a broader range of environmental features (Tables 8.3-3 and 8.3-5). As the EA is seeking two alternative alignments in this section, an evaluation method as included under Tables 8.3-3 and 8.3-5 is recommended as it includes a broader discussion of environmental impacts that is included in the advantages/disadvantages table. The general comments provided in Chapter 10 of the EA are not sufficient, as they do not specifically discuss the Hwy 404 area under Goal C2, natural environment.	b) The alternative methods of crossing the Hwy 404 interchange were not considered a comparison of alignments within a segment of the route but an evaluation of the advantages and disadvantages of local design solutions to achieve a segregated right-of-way through the existing interchange. As noted in Section 8.3.4.2 of the EA report, the preferred initial strategy (option C-B1) is to avoid environmental impacts and significant capital costs by operating the rapid transit in mixed traffic through the existing underpass on Hwy 7, basically a “do nothing” approach between the inner traffic signals at the interchange.		b) Status –No Action Required		Yes	Closed (2014)	
			c) Section 8.3.4.2 – Figure 8.3-13 identifies three local alignment options for alternative C-B2, which is the alternative for which approval is also being sought (as a contingency if the preferred alternative, C-B1, cannot provide the necessary level of service). Recognizing that this may be a highly urban area, the lack of an evaluation table does not allow us to determine if there are any natural features which could be impacted by the selection of one alignment over another. It is recommended that the Region identify the preferred alignment that this EA will be seeking approval for and discuss any potential environmental impacts.	c) The EA is seeking approval of Option C-B2, as an ultimate solution for phased implementation if Option C-B1 becomes unreliable. This option will focus on maintaining the transitway within the Hwy 7 right-of-way by modifying the lane arrangements or span of the existing Hwy 404 underpass as the preferred design solution. A table assessing the potential effects of the variations of alternative C-B2 is included as supplementary information.		c) Status –No Action Required Preliminary engineering design does not recommend implementation of Option C-B2 at this time. Therefore monitoring against the supplementary table titled “Assessment of Highway 404 Crossing” (Attachment 8 of the CMP) is not required at this time.		Yes	Closed (2009)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		1 cont'd	d) Section 8.3.5.2 – The text in this section indicates that the “civic mall easement” is the preferred route alignment for this segment, while the accompanying table (Table 8.3-6) highlights the “Enterprise Drive Option” as being preferred over the “Civic Corridor Option”. Clarification is recommended.	d) The highlighting in Table 8.3.6 of the EA report was inadvertently placed in the incorrect column. As stated in the text, the Civic Mall easement is the preferred option.		d) Status –No Action Required		Yes	Closed (2014)	
			e) Section 12.5 – Central Region has received information from the TTC indicating the preferred alignment for the Spadina Subway Extension has been selected as the diagonal alignment at Steeles Ave. The result of the selection of this alignment is that the future works for the station at Hwy 407 would be located to the north of the future Hwy 407 rapid transit r.o.w. and would be constructed under the Hwy 407 ramps without directly impacting the Black Creek meander belt, reducing potential impacts to the watercourse. This section identifies that York Region is proposing to prepare an addendum upon final approval of TTC’s EA to consider the extent of potential environmental impacts, including those on Black Creek, for the alignment recommended by the TTC. As indicated in Table 12.6-3, this amendment will include a detailed analysis of both subway tunnel and station construction methods and associated mitigation measures for the section from Hwy 407 to Steeles Ave. Central Region recommends this type of analysis be undertaken in the EA amendment for the entire subway length from Hwy 7 to Steeles Ave to ensure a consistent level of environmental impact assessment for the entire subway component of this undertaking.	e) The EA amendment will assess the effects of subway construction and operation of any components developed in more detail than in this EA between Hwy 407 and the limit of the TTC EA undertaking at Steeles Ave.		e) Status –No Action Required An EA amendment report subtitled “Response to Conditions of Approval – Vaughan N-S Link Subway Alignment Optimization” was approved by the Minister of the Environment on April 4, 2008. The TTC has prepared a separate CMP for the Spadina Subway Extension Project and is responsible for compliance monitoring related to the Vaughan N-S Link segment of the undertaking.		Yes	Closed (2014)	
			<i>Mitigation and Monitoring</i> f) With respect to environmental commitments and monitoring, the revision to Chapter 12 provides a more substantial level of detail than provided for in the draft EA document , and this information will provide greater direction to the Region in the development of the Monitoring Program. APEP is encouraged by the outline of construction and operations monitoring and the commitment to establish an independent Environmental Compliance Manager.	f) Comment noted (refer to Section 11.3 of the EA report for Environmental Commitments and Section 11.4 for Monitoring).		f) Status –No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		1 cont'd	g) It is important to note that these commitments should be identified as minimum monitoring requirements, and that monitoring of additional environmental elements may be included in the Monitoring Program if further environmental impacts are identified. APEP encourages the Region to prepare an Annual Monitoring Program Report, outlining the results of the Monitoring Program and how any environmental impacts experienced have been addressed.	g) Comment noted for consideration during development of the detailed Monitoring Program as noted in Section 11.4.1 of the EA report.		g) Status – Completed An annual monitoring program has been designed and is undertaken by the region[1]. The Annual Monitoring Program is the Compliance Monitoring Program, which includes the preparation of Annual Compliance Reports.		Yes	Closed (2015)	
Ministry of the Environment – Air Quality	Mr. Ernie Hartt, Supervisor – Air, Pesticides and Environmental Planning Central Region	2	To a large degree, the comments are intended to reflect how effectively York Region and Senes have revised the EA report and Air Quality (AQ) appendix in line with Technical Support's July 29/05 comments that were provided to the Region with respect to the draft EA report. Technical Support (TS) continues to have some outstanding concerns with the August 2005 documents that require further attention with particular regard to: the incorporation of the Senes AQ Impact Assessment into the EA report with respect to "Future" cases, and the approach taken by Senes in their AQ Impact Assessment.		York Region	Status –completed An updated Air Quality Impact Assessment Report for a Study Area Bounded by Hwy50 to York Durham Line was completed in April 2011 using the CAL3QHCR dispersion model as required in the terms and conditions for the Hwy 7 Corridor & Vaughan North-South Assessment Compliance Monitoring Program (CMP). The purpose of the Study was to assess the cumulative air quality effects that may arise due to the proposed Bus Rapid Transit (BRT) undertaking. The MOE accepted the air quality assessment report on June 17, 2011 and is satisfied that Condition 5.4 of the EA Notice of Approval has been Addressed.		Yes	Closed (2011)	
			<i>Lack of Detail in EA Report on AQ Impacts of the Project (Future Cases)</i> a) The details on the AQ impacts relating to the "Future Base Case" and the "Future BRT Case" have not been included in the body of the EA report in support of the brief summary statements made in Table 10.4-3 of the EA report. This approach is not considered appropriate by TS. It has consistently been TS's position that any evaluation of AQ impacts of a project such as this EA report should constitute the primary focus of the EA report as it relates to AQ. In the EA report, the Region continues to make the discussion of existing conditions the primary focus (Section 6.6.1) and has relied solely on referring the reader to the Senes AQ Impact Assessment when it comes to the	a) The results of the AQ assessment are summarized in Chapter 10 (Table 10.4-3) of the EA report consistent with the summary of other potential environmental effects. The EA document references Appendix L which provides the detailed AQ assessment. The Proponent does not believe that a revision to the EA document is warranted.		a) Status – completed See above.		Yes	Closed (2011)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			Future Cases. This definitely detracts from the stand-alone nature of the EA report as a means of supporting decisions on the impact of the project with respect to AQ. It remains TS's position that York Region should further revise the EA report accordingly to resolve this issue.							
		2 cont'd	<i>Focus of EA Report and Senes Report on Particulate Matter Emissions</i> b) TSP "was not assessed because the larger particles only affect visibility, while the PM ₁₀ has been associated with health impacts". Since TSP is a parameter regulated by the MOE, TS might have wished to see some further discussion of TSP and its role in defining existing AQ, however TS does acknowledge that it is not a health based parameter and agree to its being excluded from further discussion.	b) Comment noted.		b) Status- No Action Required		Yes	Closed (2014)	
			c) PM _{2.5} is included in the "Existing Conditions" discussion and has been discretely inserted into the text/discussions of the "Existing Base case", "Future base Case" and "Future BRT Case". However, overall PM emissions as discussed in the August 2005 AQ Impact Assessment continue to focus on PM ₁₀ as is demonstrated by Tables 3.2, 3.3 and 3.4 as well as Table 5.1 and 5.2, none of which have been revised to include PM _{2.5} . Figures 5.1 and 5.6 also focus on PM ₁₀ . TS feels that the adjustments made by York Region and Senes to include PM _{2.5} are inadequate and continues to recommend that PM _{2.5} be fully incorporated into all aspects of the AQ Impact Assessment.	c) As noted in the Senes AQ Impact Assessment, there is little information about PM _{2.5} emissions from vehicles and roadways, and therefore the ratio method of PM ₁₀ to PM _{2.5} was used in order to calculate the values for PM _{2.5} . Note in the Terms of Reference it says that respirable particulate matter (PM _{2.5}) will also be assessed in comparison with the proposed Canada Wide Std of 30 ug/m ³ .		c) Status – No Action Required Refer to items 16 & 17 of this document.		Yes	Closed (2014)	
			<i>Comparison of Existing AQ Data with MOE AAQC Values</i> d) Overall, some inaccuracies remain in the MOE AAQC's which have been included in the assessment of historical and measured data that appears in Section 6.6.1.3 of the EA report and in Section 2.3 of the Senes AQ report. However, TS does not require further clarification of these inaccuracies.	d) Comment noted.		d) Status – No Action Required		Yes	Closed (2014)	
			e) TS acknowledges that Senes has reviewed the historical and monitored data bases in some detail and found them to be accurate and not in need of further adjustments or changes.	e) Comment noted.		e) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		2 cont'd	f) TS is in agreement with the comments in the preamble to Tables 6.6-6 and 6.6-7 of the EA report and Tables 2.6 and 2.8 of the Senes report that reflect PM as being the most significant parameter of concern with respect to both historical data and measured ambient monitoring data. The concerns identified with respect to PM (ie. PM ₁₀ and PM _{2.5}) are to be dealt with in comments which follow in terms of dispersion modeling and mitigation.	f) Comment noted.		f) Status – No Action Required		Yes	Closed (2014)	
			<i>Development of Vehicle Emissions Data</i> g) TS acknowledges that their concerns identified in the Vehicle Emissions data/discussion have been reviewed by York Region and dealt with satisfactorily. TS is in agreement that no further action is required on these concerns at this time.	g) Comment noted.		g) Status – No Action Required		Yes	Closed (2014)	
			<i>Dispersion Modeling/Assessment of Air Quality</i> h) TS still has some concerns with respect to the representation of the project measurement/monitoring locations and the accuracy of the measurement/monitoring data collected during the somewhat limited program. TS however do not feel such concerns are significant and acknowledge that they will not change the overall conclusions of the AQ Impact Assessment.	h) Comment noted.		h) Status – No Action Required		Yes	Closed (2014)	
			<i>Matching of Alternatives Assessed in EA Report with Those Screened in the Senes Report</i> i) The July 2004 Senes Report and the draft EA report did not clearly match-up in terms of the evaluation of alternatives noted in Section 8 of the EA report and the preliminary screening of alternatives dealt with in Section 3 of the Senes Report. To clarify this issue Senes removed Section 3 from their report. In order to clear up this matter, TS requests that York Region confirm that Senes' approach on screening with respect to AQ did not provide any different result on selection of the preferred alternative from that shown in Section 8 of the final EA report.	i) The assessment of the effects of route segment alternatives on air quality, while a factor in the evaluation of natural environmental effects, did not provide any different result in the selection of the preferred alternatives from that shown in Section 8 of the EA report.		i) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring		Compliance Review			
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		2 cont'd	<p><i>Identification of Mitigation Measures</i></p> <p>j) Section 9.1.1 of the EA report contains a statement noting the intent to plant trees as part of the landscaping plan and that "trees also act as a solid body for air pollutants to settle on and therefore reduce negative effects in the atmosphere". TS would identify such efforts as tree planting as a factor in such mitigation and requests that they be considered by York Region and the appropriate revisions reflected in Table 10.4-3.</p>	<p>j) A conceptual streetscape plan is identified in Section 9.1.1 of the EA report. A detailed streetscape plan will be developed during detailed design [1]. It is acknowledged that tree planting provides an additional built-in positive effect on air quality. Tree planting will be considered further in the development in the detailed streetscape plan.</p>		<p>j) Status – Completed</p> <p>The DBCR incorporates streetscaping recommendations: Streetscape Design Guidelines (Section 4.8), General Guidelines (Section 4.9), etc. Further attention will be given to the development of a streetscape plan in detailed design.</p> <p>[1]Streetscape planting plans are complete and there is a net gain in tree planting (i.e. 1100 trees proposed to be planted versus removal of 375 trees).</p>		Yes	Closed (2012)	
			<p>k) Before any specific comment can be made on the implication of the landscaping plan, it is necessary to look at the AQ related statements in Table 10.4-3. The statement as noted under Proposed Mitigation Measures – Potential Residual Effects, suggests a 3.6% (it actually appears to be 1.6%) improvements (or decrease) in PM₁₀ concentrations "when comparing 2021 (future) forecasts with ("Future BRT Case") and without ("Future Base Case") proposed rapid transit. The major difficulty that TS has with the conclusion on future PM₁₀ concentrations (as noted above) is that it does not include consideration of Table 3.2, the existing base case pollutant concentration estimates. It is TS's opinion to include consideration of the fact that PM₁₀ emissions will increase markedly from the existing base case to the future base case. As a result there will be a 38% increase in PM₁₀ initially and it will decrease 1.6% with inclusion of BRT. For York Region to then conclude that the focus should be only on 2021 is misleading and not something we can easily agree to. At the very least TS feels that this change over the period 2001 to 2021 could be characterized in terms of BRT "slowing" the increase but it should in TS's opinion include consideration of "Further Mitigation" based on significant initial increase in PM₁₀ concentrations.</p>	<p>k) The increase in PM (2001-2021) without the project is due solely to an increase in traffic volume. Without a change in the public's attitude toward the use of single-occupancy vehicles this increase is unavoidable. The introduction of the BRT system will slow this increase. The EA report's presentation of effects in 2021 is a true reflection of the conditions with and without the undertaking operating as a mature alternative transportation mode. The purpose of this undertaking is to provide an efficient alternative travel mode with the potential to reduce the growth in private automobile use and the consequent traffic volumes generated. Further mitigation to address the natural growth in trip-making in the Region's major corridors is beyond the scope of this EA.</p>		<p>k) Status – No Action Required</p> <p>Refer to items 16 & 17 of this document. (see corresponding comments)</p>		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		2 cont'd	l) The reference for the statement in k above is data noted as being available in Tables 4.3 and 4.4 of the Senes Report, when in fact it should be Tables 3.3 and 3.4.	l) Comment noted. Table 10.4-3 of the EA report should refer to Tables 3.3 and 3.4 of the Senes AQ report, and not Tables 4.3 and 4.4.		l) Status – No Action Required		Yes	Closed (2014)	
			m) In light of comments b and c, it is TS's opinion that the issue of PM _{2.5} concentrations also needs further review and as such, Table 10.4-3 should be modified to include consideration of PM _{2.5} as well as PM ₁₀ .	m) There will be a net positive effect to the environment from PM _{2.5} and PM ₁₀ , therefore no further mitigation is required.		m) Status – No Action Required Refer to items 16 & 17 of this document.		Yes	Closed (2014)	
			<i>Monitoring of Construction PM Emissions</i> n) Table 10.4-3 of the EA report includes comments on "Degradation of air quality during construction: which indicates that "some PM emissions locally" are expected but no "Monitoring" is recommended. This information raises some concern with TS about its compatibility with information provided in Section 11.4.1 of the EA report, which does indicate that "Monitoring" will be done in the form of regular inspections of dust and vehicular emissions control. Table 11.4-1 of the EA report does provide some qualitative comment on "Monitoring" associated with "effect of construction activities on air quality (dust, odour)." TS strongly in favour of the need to do such monitoring and requests that York Region clarify what appears to be contrary statements in table 10.4-3 that no "Monitoring" is recommended.	n) Table 10.4-3 of the EA report was intended to indicate that no specific monitoring program beyond that normally required by the construction contract conditions is recommended. The Region will enforce the requirements of the standard contract conditions as described in Section 11.4.1 of the EA report.		n) Status – No Action Required.		Yes	Closed (2014)	
			<i>Senes Project Description</i> o) The content of Section 1.1 of the Senes report has been reasonably clarified with the addition of explanatory paragraph.	o) Comment noted.		o) Status – No Action Required		Yes	Closed (2014)	
			<i>Executive Summaries</i> p) Both the EA report and the Senes report executive summaries need further review in order to substantiate that they are compatible with changes to the bodies of the reports as may occur in terms of addressing the comments provided by TS and noted in the memo.	p) There are no changes proposed to the main EA report to address comments provided by TS. Clarification will be provided as appropriate.		p) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		2 cont'd	<i>Overall Assessment of Air Quality</i> q) The Overall Assessment as noted in Section 8 of the Senes report and quoted in the EA report needs further review in order to substantiate that they are compatible with changes to the bodies of the reports as may occur in terms of addressing the comments provided by TS and noted in the memo.	q) There are no changes proposed to the main EA report to address comments provided by TS. Clarification will be provided as appropriate.		q) Status – No Action Required		Yes	Closed (2014)	
Ministry of the Environment – Water Resources	Ms. Ellen Schmarje, Supervisor, Water Resources Unit, Central Region – Technical Support Section	3	a) In reference to the definitions of “Insignificant” and “Significant” in Section 10.1: Assessment Methodology, an effect that is temporary or short term in duration may be considered significant as the release of suspended solids to a watercourse can potentially cause a permanent loss of critical or productive aquatic habitat.	a) Comment noted. As described in Section 10.1 of the EA report, the definition of significant effect includes a permanent loss of critical or productive aquatic habitat, regardless of the duration of the original net effect that precipitates the permanent effect.	York Region	a) Status – No Action Required		Yes	Closed (2014)	
			b) The Proponent should note that Section 53 (OWRA) approvals from the MOE will be required for the new and expanded storm sewers and end-of-pipe stormwater management facilities prior to the construction phase (Section 11.2: Project Implementation Plan).	b) Comment noted and will be carried forward for consideration during detailed design. Section 11.2.1 of the EA report identifies examples of other approvals that may be required during the detailed design phase, but is not intended as a complete list of all post EA approvals that will be required.		b) Status – No Action Required.		Yes	Closed (2014)	
			c) A permit to take water must be obtained for all dewatering activities in excess of 50,000 L/day. The permit must be obtained prior to the commencement of any construction related activities requiring groundwater dewatering (Section 11.2: Project Implementation Plan).	c) Comment noted and will be considered during both the preparation of the EA amendment for the southern portion and during detailed design of the entire undertaking.		c) Status – No Action Required		Yes	Closed (2014)	
			d) Table 11.3 indicates that “in the event a shallow or upward groundwater movement becomes an issue due to construction of the subway during the detailed design stage, TRCA’s hydrogeologist will be consulted.” It is important to note, that any groundwater issues (including dewatering or water quality issues) related to the proposed undertaking must be dealt directly with the MOE, which may consult with TRCA if necessary.	d) Comment noted. The MOE and TRCA will be consulted accordingly during detailed design.		d) Status – Does not apply to the H3 segment To be addressed during design and construction of the Spadina Subway Extension, covered under a separate CMP.		Yes	Closed (2014)	
			e) No major outstanding surface water or groundwater issues were identified regarding the preferred	e) Comment noted. The MOE will be consulted during development of the detailed Monitoring Program as		e) Status – Completed		Yes	Closed (2014)

Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			alternative. Additional input during the detailed design phase may be required to ensure that monitoring, mitigation and contingency plans adequately assess any adverse impacts to the natural environment and/or sufficiently protect the natural environment.	appropriate [i].		A Final Drainage Study has been prepared during PE design. It outlines the stormwater management plan for the H3 segment.[1] MOE approved the application for storm sewers on June 6, 2011, and oil grit separators on August 4, 2011.[3,4] Permits have been issued by MOE for all drainage works associated with the project as listed in Item 46. Reference is made to the various plans and documents that were provided to MOE to support the applications. Conformance with permits is as per the Weekly Environmental Checklist, Item 4.2.				
Ministry of the Environment – Air and Noise Unit	Mr. Denton Miller	4	Noise a) With respect to Section 5 of Appendix K, there were several errors noted in the assessment of the 2021 baseline, BRT and LRT noise calculations. Some of the errors cancelled other errors and it is unlikely that the actual impact will change the overall conclusions drawn in Appendix K. Nonetheless the errors should be corrected.	a) Refer to responses below. As shown in the revised data attached, the conclusions drawn in the original report are still valid. Please refer to the attached Noise and Vibration Supplementary Information package for revised tables and appendices to Appendix K – Noise and Vibration impact Assessment, of the EA report.	York Region	a) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<p><i>Surface Type Used in Stamson Calculations</i></p> <p>b) The majority of the calculations in Appendix K are based on absorptive ground surfaces. Based on drawings submitted with the proposal, it is the Air and Noise Unit's opinion that ground absorption was used incorrectly in the assessment of the roadway. The Proponent should revise the subject calculations accordingly or clarify why this approach was used.</p>	<p>b) In all cases where noise monitoring was conducted (receptors) the intermediate surface was covered by grass and therefore it was determined that an absorptive designation was appropriate. ORNAMENT Technical Document (MOE 1989), states that "Soft ground surfaces such as ploughed fields, or ground covered with grass, shrubs, or other forms of vegetation are considered to be sound absorptive". This is also reflected in the monitoring results. The predicted sound levels for existing conditions (2002) (section 4.0 in Appendix K) closely resemble the measured sound levels. To be consistent in the modeling approach, the absorptive surface was also used in the prediction of noise level for future cases. However, in light of the above comment b, the noise modeling was revised using a reflective ground surface. The predicted sound levels were found to be still within the range of the measured results in most instances. Therefore, all scenarios have been revised using a reflective ground surface and are attached for review.</p>		b) Status – No Action Required		Yes	Closed (2014)	
			<p><i>Daytime and Nighttime Receiver Heights Used in Stamson Calculations</i></p> <p>c) The receiver heights used in the assessment of the receptors are not consistent with Section 5.5.4 of the MOE's publication ornament where it is stated that for the purposes of assessing the noise impact on single family dwellings and townhouse units, the following receiver heights are used: 1.5 m for defining the outdoor living area, and 4.5 m for defining a 2nd storey window. The proponent should revise the subject calculations accordingly or clarify why this approach is used.</p>	<p>c) The purpose of Section 4.3 in Appendix K is to compare the predicted sound level (from traffic) with the existing sound levels using noise monitoring data collected at specific receptors along the route. For this purpose only, the actual height of the microphone of the noise monitoring equipment was used for a direct comparison with the traffic passby at each specific receptor location. However, for predicting future noise impact the noise modeling was carried out using 1.5 m for outdoor living area and 4.5 m for a 2nd story window.</p>		c) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		4 cont'd	<i>Nighttime Receiver Source Distances Used in Stamson Calculations</i> d) When homes are backing onto the subject roadway, the daytime source receiver distance should not be equal to the nighttime source receiver distance. The daytime distances should address the sound levels in the outdoor living area (backyard), and the nighttime distance should address the sound levels at the plane of a bedroom window. In the majority of cases the two distances should differ by 3m. This was not the case in the assessments in Appendix K. The Proponent should revise the subject calculations accordingly or clarify why this approach was used.	d) The shorter of the two horizontal distances was conservatively used for both daytime and nighttime. In any case, the 3 m difference does not result in a significant/noticeable difference in the predicted sound levels. However, the nighttime receptor distances used in the revised model have been changed to reflect the 3 m difference. Refer to the attached STAMSON sheets.		d) Status – No Action Required		Yes	Closed (2014)	
			<i>Percent Traffic Split of Provincial Roadways that should be used in Stamson Calculations</i> e) The recommended day-night traffic volume ratios are 85%-15% for provincial roads. Hwy 7 is a provincial roadway. Clarification is required as to why the appropriate traffic split was not used in the assessment or the calculations should be adjusted accordingly.	e) The 90%-10% day-night traffic volume ratio used in the modeling was derived from traffic count data and adopted as an appropriate representation of conditions on Highway 7 in the study area.		e) Status – No Action Required		Yes	Closed (2014)	
			<i>Designation of Buses in Stamson Calculations</i> f) As noted in the MOE's publication ornament, buses are considered to be medium trucks; hence the percentage of medium trucks should not be the same in Appendices K-D (Predicted 2021 Baseline Traffic Noise Levels) and K-E (Sound Levels Due to Added Bus Transit Traffic). The Proponent should revise the subject calculations accordingly or clarify why this approach was used.	f) The added bus transit traffic was treated as an RT/Custom source for the STAMSON modeling, that is, a separate source from the regular traffic. Also, the traffic volume of bus transit was not included in the AADT volume for the regular traffic. Hence the percentage of medium trucks is indeed the same in Appendices K-D and K-E. The actual noise level for the bus transit was provided by the manufacturer.		f) Status – No Action Required		Yes	Closed (2014)	
		4 cont'd	<i>AADT Inconsistencies</i> g) Section 5.2 of Appendix K (Scenario 2 – Bus Transit Option), states that "Scenario 2 predicts the sound levels on the same road segments for the same year (2021), but with the added influence of the bus transit traffic". However the AADT in Appendix K-E (54,144; Sound Levels Due to Added Bus Transit Traffic) is lower than the AADT in Appendix K-D (54,528; Predicted 2021 Baseline Traffic Noise Levels). The proponent should revise the subject calculations accordingly or clarify why this approach was used.	g) The data used were generated by the travel demand modeling with the model calibrated against York Region's most recent AADT counts for Highway 7. The AADT figure for the "with BRT" scenario represents general traffic only and does not include the BRT vehicles themselves. The modeling projects a minor reduction in auto vehicle use after BRT implementation however the overall person-capacity of the roadway is increased by the carrying capacity of the BRT service.		g) Status – No Action Required.		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<i>Distances in Stamson Calculations</i> h) Some of the distances in the assessment of the proposal are not correct. For example, the distance to the centre of the eastbound segment of the roadway is 28.6 m. This is clearly not correct when assessed against Figure 9.7 of the EA report. The proponent should revise the subject calculations accordingly or clarify why this approach was used.	h) The distances have been revised to reflect those shown in the figures in Chapter 9 of the EA report. Refer to the attached STAMSON sheets.		h) Status – No Action Required		Yes	Closed (2014)	
			<i>LRT Assessment</i> i) The above concerns are for the most part also applicable to the assessment of the proposed LRT. The Proponent should revise the subject calculations accordingly or clarify why this approach was used.	i) The distances have been revised to reflect those shown in the figures in Chapter 9 of the EA report. Refer to the attached STAMSON sheets.		i) Status – No Action Required		Yes	Closed (2014)	
			<i>Preferred Assessment Methodology</i> j) The preferred assessment would see the dedicated bus lanes and the LRT, defined as separate segments in Stamson. This approach would simplify the Proponent's assessment and our review of the undertaking.	j) The recommended assessment methodology as suggested by the MOE was used in the study submitted. The bus transit and LRT were treated as a separate segment in the Stamson modeling. Please refer to Appendix K-E and Appendix K-F.		j) Status – No Action Required		Yes	Closed (2014)	
			Vibration <i>Reference Vibration Value</i> k) Confirm that the reference value for the vibration calculations in Section 6.1 of Appendix K is 1 micro-metre per second. If correct, please provide a detailed sample calculation of the results noted in Table 6.1. If incorrect please comment on the use of an appropriate reference value and the impact it will have on the calculations and the subsequent conclusions.	k) This issue had been previously responded to and discussed with Mr. Denton Miller of the MOE Noise Unit in June 2005. Please see the revised Table 6.1 attached.		k) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
Ministry of the Environment	Ms. Gemma Connolly, Special Project Officer	5	<i>CEAA Approval</i> a) Page 1-1 identifies that approval under the Canadian Environmental Assessment Act is being sought through an integral parallel process. No federal trigger was identified by CEAA through their review of the provincial EA. Therefore, EAAB is unaware of any coordinated and/or concurrent federal approval process. [1-7],	a) Given that federal funding has not yet been approved, it is anticipated that the only likely trigger will be the DFO's approval of the major river crossings. The Region expects that this local approval will be obtained through DFO's delegation of authority to the TRCA[1-7].	York Region	a) Status – Complete Transport Canada email to QSD of September 7, 2010 confirms there is no need for a Federal EA. [2] TRCA, acting on behalf of DFO has provided permits for Watercourse Alteration at the CV1 [3] and CV2 sites [4]. [2011 ACR] Permits for Warden Bridge [5], Apple Creek [6], CV3 [7] and German Mills [8] are currently under review [4]. See Item #38 above. TRCA permits were approved for Warden Bridge [5], Apple Creek [6], Beaver Creek [7]. See Item #38 above. The above encompasses all watercourse crossings on the H3 segment.		Yes	Closed (2014)	
			<i>Chapter 8 Evaluation Local Alignment Options</i> b) It is difficult to follow the evaluation methodology used to select the preferred local alignment options. This analysis is identified in Tables 8.3.-3 to 8.3-7.	b) Generally, where applicable, these options were evaluated using the major objectives adopted for the primary route alternatives analysis. In some cases, such as the Markham Centre/Enterprise Dr area, more specific local factors were used to compare options.		b) Status – No Action Required.		Yes	Closed (2014)	
			c) Table 8.3-5 identifies Option C3-4 as the preferred option and Option C3-3 as the next preferred. It is unclear how these options were ranked and evaluated.	c) The table presents the basis for the evaluation of the options by listing the key attributes or effects of each option in terms of the goals and primary objectives adopted for evaluation of the larger route segments along the corridor. Each option's performance against the goals was assessed by evaluating the individual attributes/effects to identify the preferred option in terms of each of the five main objectives. Options C3-3 and C3-4 were selected from this initial screening. The relative merits of these two options were discussed in the text supporting the evaluation table in Section 8.1.5.1. This comparison indicates that Option C3-4 is cost-effective and would provide the most convenient access to rapid transit for several trip types and destinations. At the same time the design of the new Rouge crossing to meet TRCA requirements will mitigate adverse effects on the natural environment.		c) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		5 cont'd	d) Table 8.3-6 highlights Enterprise Dr as the preferred option, while the text identifies Civic Corridor as the preferred option. Qualitative rankings are provided in Table 8.3-6 indicating fair, good but no rationale is provided on what this means in the weighing of the criteria.	d) In Table 8.3-6, the Enterprise Drive option was inadvertently highlighted as the "Technically Preferred Option". The qualitative rankings shown against each indicator were assessed collectively with implicit weighting and found to support the conclusion in the text that the Civic Mall Option best met the objectives for improved transit service through the planned Markham Centre.		d) Status – No Action Required		Yes	Closed (2014)	
			e) Table 8.3-7 provides check marks with no rationale on what these mean. Please provide further clarification on how these local alignment options were assessed and evaluated.	e) Each check mark in Table 8.3-7 indicates the alignment alternative (Option C-C1 or C-C2) that is preferred in terms of the individual planning criteria noted in the table. For some criteria, both options were considered to be equally responsive and thus both were checked. Again, these responses were assessed collectively leading to the recommendation of the northern alignment stated in the text.		e) Status – No Action Required		Yes	Closed (2014)	
		5 cont'd	f) Section 8.3.4.2 is seeking approval for both C-B1 and C-B2. The preferred option is identified as C-B1. Any proposed changes to the preferred option would be considered an amendment to the undertaking.	f) The alternative methods of crossing the Hwy 404 interchange were not considered a comparison of alignments within a segment of the route but an evaluation of the advantages and disadvantages of local design solutions to achieve a segregated right-of-way through the existing interchange. As noted in Section 8.3.4.2 of the EA report, the preferred strategy (option C-B1) is to avoid environmental impacts and significant capital costs by operating the rapid transit in mixed traffic through the existing underpass on Hwy 7, basically a "do nothing" solution. The Region is seeking approval of Option C-B2, as the preferred ultimate solution for phased implementation if Option C-B1 becomes unreliable. This option will focus on maintaining the transitway within the Hwy 7 right-of-way by modifying the lane arrangements or span of the existing Hwy 404 underpass as the preferred design solution. A supplementary table assessing the potential effects of the three variations of alternative C-B2 is attached. Option C-B2, grade separated right-of-way, will be the Region's preferred ultimate option if and when required to traverse the Hwy 404 interchange without congestion delays. Option C-B1, operation of the transitway in mixed traffic, will be used until such time congestion problems trigger the need for the grade separation Option C-B2. Improvements to the road system, currently planned by the municipalities will also influence the timing of and need for the ultimate grade separated right-of-way (C-B2).		f) Status – No Action Required H3 detail design engineering does not recommend implementation of Option C-B2 at this time. Monitoring against the supplementary table titled "Assessment of Highway 404 Crossing" (Attachment 8 of the CMP) is not required at this time.		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<i>Intermodal Stations</i> g) The York Region intermodal terminal and Richmond Hill intermodal terminal are discussed as part of the undertaking on page 9-2. These stations are not supposed to be part of this EA approval and should not be described as part of the approved undertaking.	f) Comment noted. These terminals were mentioned as examples of associated facilities in the context of inter-connectivity with other modes.		g) Status – No Action Required.		Yes	Closed (2014)	
			<i>Missing Information</i> h) Please provide the missing information in Table 10.4-2 on page 10-9.	h) A completed page 10-9 of Table 10.4-2 from the EA report is provided as supplementary information.		h) Status – No Action Required Table 10.4-2 has been updated.		Yes	Closed (2014)	
		5 cont'd	<i>Effects and Mitigation</i> i) On Table 10.4-2 some issues are evaluated as "Significant" after mitigation, yet monitoring is not recommended. Could you please justify why monitoring will not occur?	i) The issues identified as significant after mitigation are those concerning intersection levels of service analyzed as near or at capacity. The anticipated traffic volumes with or without the undertaking are such that monitoring will not lead to any further mitigation options.		i) Status – No Action Required Refer to Table 10.4-2 in Appendix 1 above for individual comments.		Yes	Closed (2014)	
			<i>Vaughan North-South Link Ultimate Conversion to Subway Technology</i>	Refer to the detailed supplementary information provided for the Vaughan North-South Link		Items j, k & l: Not applicable to H3 Design.		Yes	Closed (2014)	
			j) Page 6 of the terms of reference allowed the Region to assess the environmental effects of a subway extension between the VCC to York University. This assessment was contingent upon the Spadina Subway being extended from Downsview Station to York U in the City of Toronto.	j) The extension of subway technology from York University to VCC was contingent on the extension from Downsview Station to York University being completed. The Region's EA for the extension into York Region is contingent on approval of the EA for the portion within the City of Toronto.		Status – Does not apply to the H3 segment An EA amendment report subtitled "Response to Conditions of Approval – Vaughan N-S Link Subway Alignment Optimization" was approved by the Minister of the Environment on April 4, 2008.		Yes	Closed (2014)	
			k) Chapter 12 identifies that the logical northern limit of the Spadina subway extension would be the VCC. As a result, a major component of the analysis would have built upon the conclusions and recommendations of the City's Spadina Subway Extension EA Study, which is still ongoing. Without the conclusions of the City's study, it is difficult to determine whether or not the protection of Alignment A-1 would be feasible and should be considered as part of this EA approval.	k) The Terms of Reference for the City's EA identify the Region-owned land north of Steeles as the northern limit of all alignment options to be analyzed in their EA. Only the orientation of the alignment at this limit is not specified. Chapter 12 of the Region's EA describes the rationale for selecting Alignment A-1 to access the VCC and identifies the potential zone where A-1 may have to be modified to link with the range of alignments being considered by the City's EA south of Steeles Ave.. The EA commits the Region to develop and assess the effects of any modification through this zone in an amendment carried out after the City's EA is approved. (Refer to detailed supplementary information)		Status – Does not apply to the H3 segment The TTC has prepared a separate CMP for the Spadina Subway Extension Project and is responsible for compliance monitoring related to the Vaughan N-S Link segment of the undertaking.		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			l) Section 12.5 also defers most of the effects assessment of Alignment A-1 to be done as part of an amendment to the EA. It may be premature to protect a r.o.w. without having the benefits of what types of effects are anticipated to occur. EAAB would like the opportunity to meet with the Region and the City to discuss this component of the EA.	l) Refer to the detailed supplementary information.		Status – No Action Required		Yes	Closed (2014)	
City of Vaughan	Mr. Roy McQuillan, Manager of Corporate Policy	6	Committee Report Recommendations (a through d): a) The MOE be advised that the City of Vaughan supports the approval of the Hwy 7 EA as submitted by the Region of York.	a) Comment noted.	York Region	a) Status – No Action Required		Yes	Closed (2014)	
		6 cont'd	b) The Region of York be advised that the report entitled "Design Concept for Avenue 7 including Rapid Transit through the Vaughan Corporate Centre" also forms part of the City's comments on the Hwy 7 EA report and that the recommendation contained in that report be implemented as requested.	b) Comment noted and information will be carried forward for consideration during development of a detailed streetscape plan (refer to Section 9.1.1) at the time of detailed design. The Proponent will commit to consult the local municipalities during development of the detailed streetscape plan.		b) Status – Does not apply to the H3 segment Attention will be given to the development of a streetscape plan in Detail Design. Consultation with municipalities commenced as described under item 33 of this document.		Yes	Closed (2014)	
			c) The Region of York be requested to proceed with the amendment to the subway extension component of this EA (Vaughan North-South Link Ultimate Conversion to Subway Technology) at first opportunity, once the TTC Spadina Subway EA is approved, in order to finalize the subway alignment north of Steeles Ave.	c) Detailed comment noted. As noted on Figure 12-4 and described in Section 12.5 of the EA report, the final alignment of the subway from Hwy 407 to Steeles Ave will be determined following completion of the Toronto/TTC EA Study (Spadina Subway Extension from Downsview Station to Steeles Ave).		c) Status- Does not apply to the H3 segment		Yes	Closed (2014)	
			d) The Region of York be advised that the City of Vaughan is currently completing a number of land use studies along Hwy 7 and along the Vaughan North-South Link. It is requested that the Region of York work with the City in refining the transitway and boulevard treatments in response to the land use and design policies that may result from the studies in order to optimize the attractiveness of the urban environment and support the Region's and the City's development objectives; and that such consultation take place during the detailed design phase for the transitway and associated road allowances.	d) Detailed comment noted. York Region will work with the local municipalities, including the City of Vaughan, during detailed design and development of a detailed streetscape plan to incorporate recommendations from adjacent land use planning studies where feasible.		d) Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<i>The Undertaking – Implications for the City of Vaughan</i> e) The introduction of a rapid transit service will be a major catalyst in the transformation of the current Hwy 7 and Centre and Bathurst Streets from a Provincial highway to an urban arterial road. The City is looking to build on and support this initiative through the Centre St Study and the Hwy 7 Futures Study.	e) Detailed comment noted.		e) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			f) Generally, the impacts were positive or could be mitigated to a minimal level of significance. Given the diversity of the corridor and the form of the transitway, there will be impacts on traffic operations and urban design.	f) Detailed comment noted. As noted in Table 11.4-2 of the EA report, the Region is committed to monitoring traffic operations after implementation of the undertaking. In addition, a detailed traffic management plan will be developed prior to commencing construction (Section 11.2.2.1).		f) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
		6 cont'd	<i>Urban Design</i> g) The plan shown in the EA for the Corporate Centre does not reflect the City's ultimate preference as illustrated in the report to Committee of the Whole on October 11, 2005. The plan currently shows minimal landscaping. The recommendations contained in this report should reaffirm the City's desire to see the streetscaping/transitway plan revised either by amendment to the EA or at the time of detailed design to reflect the City's ultimate intentions. It is noted that the subway extension portion of the EA deals specifically with this issue by stating that "Transit intermodal facilities will be developed in consultation with Vaughan as part of the introduction of a comprehensive landscaping and streetscaping plan for the VCC and station precinct". These measures will need to be taken into account in the original transitway design.	g) As described in Section 9.1.1 of the EA report, a conceptual streetscape plan has been developed as part of this EA and will provide the basis for the detailed streetscape design. The Region will commit to working with the local municipalities during detailed design to incorporate streetscape elements recommended through other studies where feasible.		g) Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			h) In addition, the plan shows a "VCC Transit Square Concept" at the northwest corner of the intersection of Millway Ave and Hwy 7, which is identified as a transit terminal facility in Section 12 of the EA report. It is recognized that there will be the need for some surface intermodal facilities at a future subway terminal station. However, there is minimal information available on the facility identified in the EA study. It will have to be addressed further with the City in accordance with the statement quoted above, including the basis for the selection of this location.	h) The intention in showing a concept for the surface intermodal facilities is to identify the need for an efficient means of transferring passengers from feeder bus services to the rapid transit service. The concept, while not intended to be a detailed design is representative of the extent of surface facilities and indicative of the opportunities for integration of these facilities into the urban design of the transportation node. It also provides a basis for assessment of any potential effects on the surrounding built or natural environment. The location of the typical concept was based on the recommendations of the draft report on the City of Vaughan's study of streetscaping for the VCC.		h) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			i) The study acknowledges that there are areas that have insufficient road allowance width to permit significant landscaping. An example is the section of Hwy 7 between Martin Grove and Pine Valley Dr. For such areas, the plan suggests that redevelopment be monitored and that property be acquired through redevelopment. An alternative would be to incorporate sufficient setbacks to allow for landscaping to be provided on the private lands between road allowance and the building.	i) Comment noted. The Region will work with the local municipalities to secure the required r.o.w. and setbacks through the development approval process.		i) Status – Completed This will be addressed if or when redevelopment proposals are received. This is addressed with each site plan application. Refer to http://www.york.ca/wps/portal/yorkhome/business/yr/landdevelopment/siteplanapplications .		Yes	Closed (2014)	
		6 cont'd	j) The City is currently conducting several land use studies in areas that will be directly affected by the transitway. These include the Hwy 7 Futures Study and the Steeles Ave Corridor Study-Jane St to Keele St. Both studies are nearing conclusion. Each will have land use and urban design implications for these areas. In order to optimize the opportunities for aesthetic improvements along Hwy 7 and in the Vaughan North-South Link, the outcomes of these studies should be taken into account during the detailed design of the transitway and the surrounding road allowance. Improving the urban and aesthetic environment will support both the Region's and City's development objectives and improve the chances of their being achieved. A recommendation has been included requesting that the Region work with the City during the detailed design phase for the transitway to take into account the results of these studies.	j) Comment noted. York Region will work with the local municipalities, including the City of Vaughan, during detailed design and development of a detailed streetscape plan to incorporate recommendations from adjacent land use planning studies where feasible.		j) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			<i>Road Operations</i>			Status- Completed		Yes	Closed	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<p>The introduction of the centre median will have a number of effects, which include:</p> <p>k) A prohibition on left turns in and out from driveways and minor roads due to the transitway – The EA indicates that alternative access can be obtained by way of another site or an adjacent roadway. Users will have to adapt and find alternative routes. The introduction of U-turns at signalized intersections is also provided. The impact of the introduction of U-turns to accommodate left-in and left-out turns – in some instances there might be conflicts between U-turns and right turn movements onto Hwy 7 from side streets when the traffic signal is red. It may be necessary to restrict right turns on red lights from side streets. This should be monitored, and measures are taken to reduce any potential conflicts. It is noted that some of the intersections with four lane road sections may not permit U-turns by large trucks. Restrictions may have to be imposed where warranted.</p>	<p>k) Detailed comment noted. The Region will consult with the local municipalities [1] during the development of the detailed Traffic Management Plan [2] (as described in Section 11.2.2.1 of the EA report).</p>		<p>The Region indicated that Right Turn on Red prohibition is not required on side street[1]. Side street traffic should follow rules of the road for right turning on red and proceed with the movement only when safe to do so.</p> <p>Lefts out/in crossing the Rapidway are prohibited; instead, U-turns at signalized intersections help address this issue. Permanent Traffic Signals Layout drawings have been Issued for Construction. [2]</p> <p>[2] Traffic impact studies for each stage/phase of construction (Phase 1-14) were prepared.</p> <p>[1] Each report was circulated to the Town of Richmond Hill and the Town of Markham for review and comment. No comments were received.</p>			(2014)	
		6 cont'd	<p>l) Pedestrian crossings gave the additional road width in some areas – Given the introduction of the transitway and the station facilities, there is a substantial increase in the paved portion of the road allowance, especially at major intersections. Some pedestrians may not be able to cross in one signal phase. The transitway will have pedestrian refuge areas built into the design to allow them to wait at mid-crossing. A further alternative would be to have a two-stage crossing system to accommodate heavier traffic. Before proceeding to a two-stage system, monitoring should occur under operating conditions to determine if it is warranted.[1-3]</p>	<p>l) Detailed comment noted and will be carried forward for consideration of the detailed Traffic Management Plan (Section 11.2.2.1). Traffic Operation Monitoring (noted in Table 11.4-2) will include consideration of effects on pedestrians [1-3].</p>		<p>l) Status - Completed</p> <p>Median station was used for pedestrians at all intersections.[2,3]</p> <p>A Transit Priority Measures Report was completed which included modelling of various scenarios. [3]</p>		Yes	Closed (2015)	
			<p>m) The potential for traffic infiltration in some areas – Traffic infiltration has been identified as a possible problem in certain neighbourhoods, resulting from drivers trying to avoid Hwy 7. This may increase as a result of the constraints introduced by the transitway. The following neighbourhoods may be affected: Monsheen Dr, Willis Rd/Chancellor Dr, New Westminster Dr, and Beverly Glen Blvd. The EA recommends that these neighbourhoods be monitored before and after the implementation of the transitway to determine if additional mitigation measures are required.</p>	<p>m) Detailed comment noted. York Region will work with the municipalities during monitoring of traffic operations after implementation of the transitway to address issues/concerns including traffic infiltration.</p>		<p>Status – Completed</p> <p>Before and after intersection turning movement traffic counts do not show an increase in traffic at neighbourhood roads. Analysis does not indicate any increase in traffic infiltration. There were no traffic issues/concerns raised by the Municipalities after implementation of the transitway.</p>	<p>York Region Transportation Planning Memo to File, November 23, 2016, Doc. Ref. # YR-2016-001-Attachemnet 3</p>	Yes	Closed (2016)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<i>Vaughan North-South Link Ultimate Conversion to Subway Technology</i> n) The EA study confirmed the alignment selected through the Higher Order Transit Corridor Protection Study, which was incorporated into OPA 529, subject to consideration of the results of TTC's current EA process.	n) Comment noted.		n) Status – No Action Required		Yes	Closed (2014)	
			o) This EA is seeking the approval of this alignment with the option to finalize the portion south of Hwy 407 to tie into the alignment that may ultimately be chosen through the TTC's EA process for the Spadina Subway Extension. No change to the alignment to the north of Hwy 407 is proposed.	o) Comment noted. Refer to Section 12.5 and Figure 12-4 of the EA report.		o) Status – No Action Required		Yes	Closed (2014)	
		6 cont'd	p) The recommendations of this portion of the EA study should be supported. Putting in place the EA approvals for a subway extension from Steeles Ave to the Corporate Centre is a welcomed initiative for a number of reasons. It will clearly establish a commitment to the development concepts that are being put forward in City, Regional and Provincial planning documents in the interim it will inform investment decisions by both the public and private sectors; it will allow for the necessary property protection; and the project will be design-ready so that the next steps in the process can take place quickly once financing has been committed.	p) Comment noted.		p) Status – No Action Required		Yes	Closed (2014)	
			q) There is a level of uncertainty surrounding the alignment between Steeles Ave and Hwy 407 as a result of the TTC's Spadina Subway Extension EA. This is unavoidable due to the timing of the two processes. Of primary concern is maintaining the Millway Ave alignment through the Corporate Centre in order to ensure that the Hwy 7 station can be built at its planned location and so property protection and acquisition can continue. The TTC has demonstrated that the three alignment alternatives currently under consideration in the Spadina EA will all work in the context of the City's objectives for the Corporate Centre. All three can provide for the location of an additional station at the planned Hwy 407 Transitway, on the west side of Jane St, south of the highway.	q) Comment noted.		q) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			r) In order to overcome this issue, the EA recommends that additional studies take place when the preferred designs for the inter-related facilities have received EA approval. These studies would form the basis for an EA amendment. It is critical that none of the EA processes be slowed. Approval of this portion of the EA on the basis of the planned amendment should be supported. In addition, the Region of York should be requested to initiate the amending report shortly after the approval of the TTC's EA. Failure to proceed expeditiously with the amendment to the EA may be interpreted as a lack of commitment to the project, possibly altering investment decisions and compromising the preservation of r.o.w.	r) Detailed comment noted. As noted on Figure 12-4 and described in Section 12.5 of the EA report, the final alignment of the subway from Hwy 407 to Steeles Ave will be determined following completion of the Toronto/TTC EA Study (Spadina Subway Extension from Downsview Station to Steeles Ave).		r) Status – No Action Required		Yes	Closed (2014)	
		6 cont'd	s) The implementation of the YRTP will be a positive step in the evolution of the Region of York and the affected local municipalities. The plan will promote the transformation of southern York Region into a more urban place by shaping the style and intensity of development in the affected corridors, supporting economic development, increasing public mobility and improving environmental quality by offering an alternative to the private automobile. For these reasons the approval of the EA should be supported.	s) Comment noted.		s) Status – No Action Required		Yes	Closed (2014)	
Ontario Secretariat for Aboriginal Affairs (OSAA)	Mr. Richard Saunders, Director Negotiations Branch	7	a) In Section 14.2-Stakeholder Consultation of the EA Report, the Proponent indicates that they have followed OSAA's recommendations as outlined in correspondence dated July 28, 2005. This table indicates the responses and requests for information from the various First Nations contacted by the Proponent.	a) Comment noted.	York Region	a) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			b) OSAA recommends that the Proponent continue to contact the relevant First Nations and that follow-up contact be made with all the identified First Nations and Aboriginal organizations. [1-3]	b) Comment noted. The Proponent will continue to consult First Nations based on their identified interests/concerns and specific request for additional involvement (as an example, any First Nation that identifies an interest in archaeological findings will be forwarded any future archaeological reports prepared during detailed design)[1-3].		b) Status – Completed [1] Hwy 7 EA Notice of submission of CMP for public review and comment. [2] As stated in the H3 Detail Design Work Plan, notices of public consultation opportunities was provided to First Nations that have expressed their wish to be kept informed of the implementation of the undertaking. [3] Huron-Wendat First Nation has been notified of the completion Stage 2 and Stage 3 Archaeological Assessments in the Highway 7 corridor from Bayview Avenue to Warden Avenue. 2014 – No further consultation undertaken with First Nations. All archaeological studies and public consultation are complete for the design and construction phases. Status remains ongoing in case of any additional archaeological finds are discovered during the final construction activities in 2015. No archaeological findings were discovered during construction activities.		Yes	Closed (2015)

As per the stakeholder comment, MOE should consult their legal branch for further advice on consultation requirements.</p> <p>2015 – No archaeological finds were discovered during construction, which is now complete.</p>		Yes	Closed (2015)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
Health Canada	Ms. Carolyn Dunn, Environmental Assessment Officer	8	These comments are in regards to the responses to Health Canada comments on the draft EA report dated July 8, 2005 a) Section 6.2.5 – A contingency plan for managing effects to drinking water wells needs to be developed as part of the environmental assessment, rather than later in the process [2-4]. Furthermore, no responses were provided related to the identification of municipal drinking water intakes; this is required as part of the assessment [1].	a) As noted in Table 11.3-1 (I.D.#4), the Proponent has committed to preparing a contingency plan to address potential effects to water wells during detailed design of the undertaking [i] [2-4]. Identification of wells and municipal drinking water intakes will be undertaken during detailed design [ii] [1].	York Region	a) Status- Complete [2-4]Construction activities identified to have an impact on water wells were addressed during permit to take water application to the Ministry of Environment. [j] The PTTW applications (ID 8061) summarize the expert's determination that there are no anticipated negative impacts to surface or groundwater users. All permits were issued by MOE (ID Y2014-010). Contingency plans in the form of spills response and management, erosion and sediment control (including having additional materials on site), waste and hazardous materials management and dust control) are outlined in the Environmental Management Plan. Monitoring is via the Weekly Environmental Checklist (see Sections 1.0, 2.0, 3.0 and section 4.2 related to compliance with the PTTW.		Yes	Closed (2014)	
			b) Appendix K – it is crucial that construction noise is included in the EA. This is standard practice in EA, to consider the effects of all phases of the project. The changes in the acoustic environment during construction constitute an important potential effect to human health.	b) As noted in Table 11.4-1 (Construction Monitoring), the Proponent has committed to monitoring noise generated by construction activities to ensure compliance with Municipal By-Laws. [1]		b) Status-Completed Weekly Environmental Checklist section 4.4 Municipal Compliance visually verifies that excessive noise is not being generated during construction activities ie/ unnecessary use of back up alarms, banging of buckets, etc. During the introduction of piling operations, which have the potential to produce significant noise levels, and have a potential to disturb sensitive areas noise monitoring was conducted to ensure compliance.		Yes	Closed (2015)

		8 cont'd	c) Appendix L – In order to fully protect human health, ozone must be included in the air quality assessment of the EA. The reference for odour and formaldehyde in Section 4.2 of the air quality assessment should be provided in the EA (not referenced on the internet).	c) As noted in Table 10.4-3, there is a net positive effect on all air pollutants assessed related to the proposed undertaking.		b) Status – No Action Required		Yes	Closed (2014)	
Ministry of Transportation (MTO)	Mr. Robb Minnes, Project Manager	9	The notes below are items that the MTO raised on the draft EA report and how they have been addressed in the final EA report. <i>GO BRT and Hwy 407 Transitway</i> a) MTO indicated that the references in the EA to the relationship between the GO BRT project and the 407 Transitway were confusing. While not a critical issue, it would have been preferred if section 1.3g had included the following clarification: "The initial phase of the GO BRT project, as supported by MTO, consists of buses running in mixed traffic on existing road facilities including a section of Hwy 407. The 407 Transitway, which has been planned and is being protected by MTO, is designed as a fully grade separated transit facility supporting bus or LRT technologies. It will run adjacent to, but outside of the Hwy 407 r.o.w. between Burlington and Oshawa".	a) Comment noted. The undertaking for the 407 Transitway will be defined through a separate EA by the MTO.	York Region	a) Status – No Action Required		Yes	Closed (2014)	
			b) MTO had also requested that where the EA discusses Hwy 7 or Vaughan north-south transit service interface with Hwy 407 transit service, it should address both shorter term interface with GO BRT mixed traffic service on Hwy 407 as well as longer term interface with the grade separated 407 Transitway service. This has been done.	b) Comment noted.		b) Status – No Action Required		Yes	Closed (2014)	
			<i>Plans and Figures</i> c) All of the plans referring to "407 Transitway" have been changed to "Future 407 Transitway" except Figures 8.3-1 through 8.3-17.	c) Comment noted.		c) Status – No Action Required		Yes	Closed (2014)	
			d) The proposed sidewalk on the south side of Hwy 7, shown on Figures 9-43 and 9-44 has been deleted as requested.	d) Comment noted.		d) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		9 cont'd	<i>Structures</i> e) Section 9.1.5 identifies work required to accommodate the transit corridor where it crosses CAH designations including lane width and sidewalk reductions as well as structure modifications. Pursuant to the MTO's request, the introduction to Section 9.1.5 now indicates that the identified modifications within the CAH must be reviewed and approved by the Ministry. Further, the CAH modifications are now identified throughout this section.	e) Comment noted.		e) Status – No Action Required		Yes	Closed (2014)	
			f) The Final EA document is acceptable to the MTO.	f) Comment noted.		f) Status – No Action Required		Yes	Closed (2014)	
Town[City] of Markham	Mr. Arup Mukherjee	10	General Committee Report re. Hwy 7 EA a) Recommendations include that Council endorses the findings of the Environmental Study Report for the Hwy 7 rapid transit project and that staff continues to work with Regional and YRTP staff to finalize the design for the rapid transit facility.	a) Comment noted. York Region will continue to work with local municipalities including the Town[City] of Markham, during detailed design and implementation of the undertaking.	York Region	a) Status – Completed Preliminary consultation with municipalities, including the Town [City] of Markham, regarding design approvals commenced during the PE design phase as described under Item 33 of this document.		Yes	Closed (2014)	
			b) Based on the above endorsement, staff has worked with the Proponents for the Liberty development to secure and protect sufficient r.o.w. along Town Centre Blvd for the rapid transit proposal. It is recognized that further consultation will be required with IBM to secure the remaining r.o.w. for this option.	b) Comment noted. The Region will work with the local municipalities to secure the required r.o.w.		b) Status – Completed A Cedarland Alignment Modification Report has been finalised following receipt of MOE and TRCA comments – see Appendix 4 for monitoring. The report outlines the approach and the necessary r.o.w requirements.		Yes	Closed (2011)

Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
City of Toronto	Mr. Rod McPhail	11	Letter dated December 6, 2005 Hwy 7 EA a) The EA report indicates that, in the absence of an approved alignment for the Spadina Subway extension between Downsview Station and Steeles Ave, the study could not come to any conclusions regarding a recommended alignment and preferred design for a further extension of the Spadina Subway north of Steeles Ave. The EA report proposes, in spite of the lack of a recommended alignment or preferred design, that a subway extension from the potential Steeles Station to Vaughan Corporate Centre (VCC) be approved. The EA report recommends, however that in order to follow through on a subway extension, an amendment (or addendum) to the EA will be completed. This amendment would use the approved alignment from the TTC/City EA, once MOE approval is received, as a starting point to develop and assess alternative design concepts for the subway extension between Steeles Ave and VCC. Chapter 12 of the EA report contains a description of the components of the amendment report.	a) Throughout the Region's EA Study process, York Region, TTC and City of Toronto staff have participated in a reciprocal manner on the respective Technical Advisory Committees for the Spadina Subway Extension, both in Toronto and York Region. The confirmation of subway alignment recommended in prior studies relating to property protection for the VCC and the identification of the extent and scope of the tie-in alignment to be addressed in the addendum resulted from close collaboration with TTC staff and their consultant. This consultation has ensured that the alignment for the portion of the subway extension north of Hwy 407, for which approval is sought in the Region's EA is compatible with all alignment options from which the TTC/City of Toronto EA's preferred alignment will be selected. Also, the discussions and exchange of information form the basis of the description of components that are required to be addressed in the proposed addendum for the portion south of Highway 407 where the tie-in to the TTC's preferred alignment would be achieved.	York Region	a) Status – Does not apply to the H3 segment An EA amendment report subtitled "Response to Conditions of Approval – Vaughan N-S Link Subway Alignment Optimization" was approved by the Minister of the Environment on April 4, 2008 The TTC has prepared a separate CMP for the Spadina Subway Extension Project and is responsible for compliance monitoring related to the Vaughan N-S Link segment of the undertaking.		Yes	Closed (2014)	
			EA Consultation b) Both the Hwy 7 EA and the Spadina Subway Extension EA had a TAC with staff representatives from York Region, City of Vaughan, YRT, City of Toronto and TTC.	A revised Figure 12-4 is included in the supplementary information regarding the Vaughan North-South Link and includes the preferred alignment identified in the TTC Spadina Extension EA (The preferred TTC EA alignment had not been confirmed at the time the Region's Hwy 7 and VNSL EA was being completed for formal submission).		Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		11 cont'd	c) In addition to attending TTC/City EA TAC meetings for the Spadina Subway extension EA, York Region, YRT, and City of Vaughan representatives have met with TAC staff regarding proposed Steeles Ave station options and subway design requirements to extend the subway beyond the proposed Steeles Ave station. The outcome of this work was the development and evaluation of concepts for the proposed Steeles Ave station, subway alignment, and ancillary facilities. The preferred concept for the Steeles Ave station, and the subway alignment in its vicinity will be put forward to the MOE upon Toronto City Council approval of the Spadina Subway Extension EA findings and the completion of the EA report (early 2006). The preferred alignment (N-3 on attached figure) was identified through the TTC/City EA study process and was evaluated by the TAC during the summer of 2005. This alignment is not consistent with the preferred alignment A-1 shown in the Hwy 7 EA.			Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			Timing of Evaluation/Selection of Alignments d) The draft Hwy 7 EA was circulated for review in April 2005. At that time the TTC/City Spadina Subway Extension EA study was finalizing the selection of a preferred route, which was shown at public meetings in May 2005. The City's review of the draft EA, noting no substantial comments, was based on their understanding that the component of the study dealing with the subway would be updated to reflect current work from the TTC/City study prior to York Region submitting its final EA report. In particular that Chapter 12 would be reworked to reflect the TTC/City EA work.			Status – Does not apply to the H3 segment.		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		11 cont'd	e) York Region changed the final version of Chapter 12 quite substantially from the draft EA. However, the evaluation of alignment options relies almost entirely on alignments generated based on the 1993 TTC EA for the subway extension. While the recommended A-1 alignment, for which approval is requested, is similar to one of the alignments evaluated in the more recent TTC/City EA (as far as the tail track north of Steeles Ave), it is not the preferred alignment that has been put forward to Toronto City Council for approval. The preferred alignment from the TTC/City EA was not evaluated in the Hwy 7 EA, even though that alignment was identified before the Region finalizing its EA report in August 2005.			Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			Amendment to Hwy 7 EA f) The City of Toronto and TTC suggest that an addendum to the Hwy 7 EA, reflecting the preferred alignment to Steeles West Station, would be an appropriate venue to address the concerns that they have, assuming that an addendum is completed prior to the City and TTC considering a further extension of the Spadina Subway for approval through the City's and TTC's planning and approval processes.			Status – Does not apply to the H3 segment		Yes	Closed (2014)	
Region of Peel	Sabbir Saiyed, Principal Transportation Planner	12	a) The Region of Peel Official Plan places a strong emphasis on the increased use of sustainable transportation nodes such as transit, cycling, and walking. Peel Region recently adopted the following transportation vision to focus efforts in achieving the desired future transportation system: "Peel Region will have a safe, convenient, efficient, multi-modal, sustainable and integrated transportation system that supports a vibrant economy, respects the natural and urban environment, meets the diverse needs of residents and contributes to a higher quality of life".	a) Comment noted.	York Region	a) Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		12 cont'd	b) The Region of Peel supports a balanced transportation system that promotes both roads and transit. The Region encourages improved accessibility by road and public transit to major nodes and corridors. On page E-7, it is stated that the preferred alternative will be able to meet long-term growth needs and planning objectives. They suggest that the current EA should take into consideration the needs to move automobile and truck traffic safely and efficiently on the Hwy 7 corridor and examine an alternative that supports all modes of transportation. Thus, a balanced alternative needs to be investigated further.	b) Comment noted. A wide range of alternatives to the undertaking was included in the assessment (refer to Chapter 3 of the EA report) to address the purpose of the undertaking as approved by the Minister of the Environment. The purpose of the undertaking is summarized in Section E.2 of the EA report. The preferred alternative to the undertaking (described in Section 3.1.5) includes all components of the "current commitments" (described in Section 3.1.2), including all York Region Transportation Master Plan improvements. The Transportation Master Plan includes a multi-modal approach to address travel demand and goods movement to 2031.		b) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			c) Local public transit along Hwy 7 (Regional Rd 107) in Peel Region is operated by the City of Brampton. Therefore in order to improve future transit services on the Hwy 7 corridor, it is important to coordinate transit improvements in close partnership with the City of Brampton and Peel Region.	c) The Region of Peel has been included in the Technical Advisory Committee and the Government Review Team for this formal EA submission. York Region will work with Peel to integrate any future Hwy 7 transit improvements west of Hwy 50 with the York Region undertaking defined in this EA.		c) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			d) A station should be considered in the vicinity of Hwy 7 and Hwy 50. Schedule A of the City of Brampton Official Plan designates this area as a "Primary Office Node". Since this area will be a major trip generator, a station is justified at this location. Section 4.3.4.12 of the Peel Region's Long Range Transportation Plan (LRTP) supports this position by directing the Region to "support gateways and interconnections between the local bus network and future transitways, especially at Regional Urban Nodes".	d) As noted in Figures 9-1 and 9-2, a transit stop has been proposed at Hwy 50 which is the planned terminus of rapid transit service as defined through this EA. Should rapid transit service be planned west of Hwy 50 into Peel Region, York Region will work with Peel Region to integrate services appropriately.		d) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			e) A reference is made regarding Hwy 427 on page 9-8 as: "Between Hwy 50 and Hwy 27, the existing Hwy 7 alignment would shift to the north up to 6.7 m to incorporate the MTO's future Hwy 427 extension allowing Hwy 7 to be widened on the north side only". This should be discussed with Peel Region and MTO before proceeding further.	e) MTO will be consulted during detailed design as it relates to any work within their jurisdiction, including the widening of the existing Hwy 7 structure over Hwy 427.		e) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			f) To ensure that there will be good connectivity between Peel and York Regions, the EA study area (page 2-1) should include areas west of Hwy 50 along Hwy 7 in Peel.	f) The study area for this EA extends from the York/Peel boundary (Hwy 50) to the York/Durham boundary. Should Peel Region or Brampton choose to define transit improvements west of Hwy 50, York Region will work with the neighbouring jurisdiction to integrate services accordingly.		f) Status – Does not apply to the H3 segment		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report						Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes	
		12 cont'd	g) The Region of Peel L RTP has the following policies regarding transit improvements and promotion: L RTP Policy 4.3.4.4: Support fare integration and service coordination of inter-regional and local transit, especially at transfer points within Peel, with services in neighbouring municipalities and with GO Transit. L RTP Policy 4.3.4.9: Work with all levels of government to advance inter-regional transit plans including rapid transit, commuter rail, GTA transit corridors and GTA transportation centres. To make transit an attractive alternative between York and Peel Regions, Viva and the City of Brampton – AcceleRide – transit initiative should commit to planning and implement seamless travel between York and Peel with better fare integration and hassle-free transfer service.	g) Comments noted. The undertaking defined in this EA includes rapid transit service as far west as the York/Peel boundary. Should Peel Region or the City of Brampton choose to plan additional service within their municipal boundary, York Region will work with the neighbouring jurisdiction to integrate services accordingly. Transit fare integration is outside the scope of this EA.		g) Status – Does not apply to the H3 segment		Yes	Closed (2014)		
			h) The pedestrian environment is not adequately addressed at the boundary of Peel/York Region. The EA study indicates that Hwy 7 may be perceived as a highway-like road, which in turn with the introduction of transit service vehicles could create an unfriendly environment for pedestrians” (page 10-5). In order to attract transit users, it is important to provide a safe, comfortable and attractive pedestrian environment. An unfriendly pedestrian environment can be a barrier for commuters to choose transit as their preferred mode of transportation. Therefore, more effort should be taken to ensure the pedestrian friendliness of the project.	h) As shown on Figure 9-2, sidewalks are planned for both sides of Hwy 7 as far west as the York/Peel boundary (Hwy 50). A conceptual streetscape plan is described in Section 9.1.1 of the EA report. A detailed streetscape plan will be developed during detailed design. Page 10-5 (Table 10.4-2) identifies potential Environmental Effects. The table also identifies the Built-in Positive Attributes of the undertaking (i.e. Design transitway to facilitate safe pedestrian road crossings with median refuge. Improved streetscaping in order to create a friendlier pedestrian environment).		h) Status – Does not apply to the H3 segment The DBCR addresses pedestrian safety, for example Guardrail / Railings (Section 4.5), Safety and Security Guidelines (Section 4.9.4), Placement of Streetscape Elements (Section 4.9.8), Crosswalks (Section 4.21), Public Telephone (Section 4.22), etc. This requirement is maintained throughout Detail Design.		Yes	Closed (2014)		
			i) On page E-5, the description of route alternatives is provided for Segment A: between Hwy 50 and Hwy 400. It is mentioned that "...the only feasible route alternative is to locate the transitway in the median of the existing Hwy 7 cross-section...". The above statement needs to be discussed further and coordinated with Peel Region and the City of Brampton for further service integration.	i) Chapter 5 of the EA report includes screening of route alternatives for Segment A (York/Peel boundary to Hwy 400) and includes the consideration of six different routes (Steeles Ave, Hwy 407, Hwy 7, Langstaff Rd, Rutherford Rd and Major Mackenzie Dr). See Table 5.1-1 (Preliminary Screening of Route Options) and Table 5.3-1 (Analysis of Alternative Routes and Technology Combinations).		i) Status – Does not apply to the H3 segment		Yes	Closed (2014)		

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
Durham Region of Peel	Mr. Ramesh Jagannathan, Manager Transportation Planning and Research	13	a) As noted in the EA report, the preferred option proposes buses operating in mixed traffic between the York-Durham Line and Reesor Rd, until such time as an extension of the transitway is warranted. Durham Region supports the wording that has been added to Section 8.3.6.1 since the draft EA report, which states that additional r.o.w. East of Reesor Rd should be acquired through the site plan process for adjacent development, in order to accommodate dedicated transit lanes in the long-term.	a) Comment noted.	York Region	a) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			b) The Region will assume local transit services from the area municipalities on January 1, 2006. Accordingly, Durham Region Transit is committed to working with York Region Transit to coordinate future transit service delivery.	b) Comment noted.		b) Status – No Action Required		Yes	Closed (2014)	
			c) The preferred option (Option 9-1.1) proposes a future transit station at Hwy 7 and the York-Durham Line. Durham Region note that this station has been detailed further, since the Draft EA Report in the preferred alignment drawing (i.e. Figure 9-81). Durham Region suggests that additional wording is added in Section 8.3.6, noting that this station could potentially be moved to an easterly location in the future urban area of Seaton. This would provide a more direct connection with Durham Region Transit services. Please note that the proposed Draft Central Pickering Development Plan for the Seaton urban area identifies a future transit station (referred to as a Transit Interchange) at Hwy 407 and Sideline 26.	c) Comment noted. York Region Transit will work with Durham Region Transit to ensure coordinated service at the boundary between the two jurisdictions.		c) Status – No Action Required		Yes	Closed (2014)	
			d) The choice of Hwy 7 for rapid transit services, over Hwy 407, is understandable given York Region's focus on intra-regional urban transit services. The Hwy 407 Transitway, however, is more significant from an inter-regional point of view. As such, rapid transit service on Hwy 7 should be treated and designed to be complementary to future Hwy 407 Transitway services, rather than competitive.	d) Comment noted. As noted in this comment and described in the Region's Transportation Master Plan and in various sections of the EA report, the undertaking is a key component of the York Region Rapid Transit Plan, which focuses on intra-regional urban rapid transit, with connections to inter-regional services (such as GO Rail and 407 Transitway) and other neighbouring rapid transit (TTC etc...).		d) Status – No Action Required		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
Toronto and Region Conservation Authority	Ms. Beth Williston	14	a) TRCA recognizes that the Preferred Design requires a new crossing of the Rouge River (see figure 9-60). Staff met on site with York Region and Rouge Park representatives to discuss the implications of this crossing on November 18, 2005. Further to this meeting, staff completed its review of the document and advises that TRCA has no objection to the proposed crossing, as its impact on the placement and function of the transitway is now understood.	a) TRCA agreement in principle to the proposed Rouge River crossing is noted.	York Region	a) Status – Completed A new crossing was not pursued. A Cedarland Alignment Modification Report has been finalised following receipt of MOE and TRCA comments. H3 PE Design provides for the crossing of the Rouge River on Warden Avenue, requiring 11m of bridge widening. TRCA was consulted during the development of the Cedarland Alignment Modification Report.		Yes	Closed (2010)	
			b) Table 8.3-9 should be revised in order to clearly distinguish this alternative as preferable to the others, particularly as it will have the greatest negative impact on the natural environment.	b) A revised Table 8.3-9 is included in the attached supplemental information to TRCA. The table is revised to include more of the detailed information as presented in Table 8.3-5 and wording as summarized in the text of section 8.3.5.1 that better distinguishes the preferred alignment alternative.		b) Status – No Action Required		Yes	Closed (2014)	
			c) Any new crossing of a valley or stream corridor has a significant impact on the ecological function of the system. In accordance with TRCA's Valley and Stream Corridor Management Program as well as Rouge Park programs and policies, valley and stream crossings must be minimized in order to preserve the environmental integrity of the system. To this end, TRCA is advising that any future crossings of the Rouge River and its tributaries in this area are of significant concern. TRCA and Rouge Park will require that future Environmental Assessment or Planning Act applications in this area be developed such that no new crossings of the Rouge River, Apple Creek or Beaver Creek are approved.	c) The comment noted for future Environmental Assessment or Planning Act applications in this area.		c) Status – No Action Required		Yes	Closed (2014)	
			d) TRCA requests that York Region commits to restoring the surrounding valley land and floodplain as part of a compensation plan to address the impacts associated with this new crossing. This process would include the acquisition of the flood plain property west of Warden Avenue and south of Cedarland Drive for this purpose. A restoration plan should be prepared in consultation with TRCA staff to ensure that Terrestrial Natural Heritage objectives are met to maximize the ecological benefit to this area. Notwithstanding the above,	d) The Region will work with TRCA to develop a compensation plan during detailed design that satisfies the agencies requirements. [i] As noted in section 11.2.1, the requirement for TRCA permits are identified as part of post-EA approval activities. [1-5]		d) Status – Completed A Cedarland Alignment Modification Report has been finalised following receipt of MOE and TRCA comments [1]. TRCA was consulted during the development of the Cedarland Alignment Modification Report [2]. [3][4][5] A permit application for Warden Bridge was approved by TRCA and includes a restoration plan that provides		Yes	Closed (2012)

			additional compensation may be required when this project moves to detailed design.			for mitigation or compensation to meet terrestrial natural heritage objectives. The issuance of the permit reflects TRCA and YR agreement on the scope of the work at the Rouge River crossing and the restoration requirements, and therefore addresses the compliance requirement.				
		14 cont'd	Please note that other outstanding TRCA concerns are provided below: e) The sentence in the third paragraph on page E-7 that ends "... to preserve the aquatic habitat" should be revised to read "... to preserve the aquatic and terrestrial habitat".	e) Comment noted.		e) Status – No Action Required		Yes	Closed (2014)	
		14 cont'd	f) It should be noted on Page 9-16 that the minimum crossing opening for Local Alignment C3-4 to satisfy geomorphic requirements is expected to be approximately 80 to 120 metres, and may be greater depending on site conditions. Additionally, the conceptual crossing structure profile and dimensions should be removed from Fig 9-60 to ensure that the EA is not misinterpreted to read that a 30-metre crossing may be permitted.	f) Section 9.1.5 (27) indicates that an [i] meander belt analysis and a 100-year erosion limit will be determined during preliminary and detailed design to determine the sizing of the bridge span for the planned Rouge River crossing. Figure 9-60 also indicates that the sizing of the structure will be determined during the design phase. A revised figure 9-60 is attached and has been revised to delete the reference to a 30-metre structure span[1-5].		f) Status – Completed A Cedarland Alignment Modification Report has been finalised following receipt of MOE and TRCA comments. H3 PE Design provides for the crossing of the Rouge River on Warden Avenue, requiring 11m of bridge widening [1]. TRCA was consulted during the development of the Cedarland Alignment Modification Report [2]. [3]TRCA has approved the permit for Warden Bridge on June 4, 2012. MNR was also consulted during the permit and design process[4][5]. MNR has approved the proposed mitigation plan for Apple Creek and Warden Bridge on July 6, 2012.[4][5] To address 2012 ACR comment, numbering was corrected in the Response column to read [1-5]		Yes	Closed (2012)	
		14 cont'd	g) Table 8.2-1 has been revised to include an indicator under Objective C4 for "extent of channel realignment", but not for impacts to the restriction of channel plan form as per previous comments. Staff considers the extension of existing watercourse crossings to be potentially detrimental to physical processes in the	g) The indicator "extent of channel realignment" has been considered a measure of any additional restriction of channel plan form due to the channel having to be re-aligned locally at existing crossings to follow the increment of increase in the length of existing crossing structures. This increase is 5 metres at the entrance and exit of		g) Status – Completed [1-6]TRCA has approved the following permits: <ul style="list-style-type: none"> ▪ CV1 (German Mills east of Pond Dr.) on July 28, 2011; ▪ CV2 (German Mills west of Hwy 404) 		Yes	Closed (2012)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review

			watercourse, as this will impede natural plan form migration by confining additional channel length in structures that are of an insufficient width to allow full meander bend development and evolution. Table 8.2-1 and 10.4-3 should be revised so that this issue is reflected in the evaluation.	culverts and bridges which at present, have a length suitable for crossing a 5-7 lane roadway. The Region agrees that the textual assessment of effects preceding Table 10.4-3 should include recognition that the extension of existing crossings with insufficient width to allow full meander development will introduce a moderately significant effect on natural plan form migration at existing crossing entrances and exits. This will be addressed further during the TRCA permit approval stage in the development of a compensation plan to maximize ecological benefit. [1-7]		on August 15, 2011; <ul style="list-style-type: none"> ▪ Beaver Creek (CV3) on January 4, 2012; ▪ Revision to Beaver Creek on May 8, 2012 ▪ Apple Creek on March 20, 2012; and ▪ Warden Bridge on June 4, 2012. The above permits reflect all works related to watercourses on the H3 segment. [7,8]MNR has approved the proposed mitigation plan for Apple Creek and Warden Bridge on July 6, 2012.				
		14 cont'd	h) The number of new and widened watercourse crossings associated with each alternative route should be included in Table 8.3-2, as per evaluation tables in other sections.	h) The three alternatives for Segment B East (refer to page 8-10 of the EA report) have the following new/widened watercourse crossings. Alternative B4 – No new or widened crossings required. Alternative B5 – New crossings include: Westminster Creek east of Dufferin Street; West Don River east of Dufferin Street, west of Bathurst Street and east of Bathurst Street; Widened structures at Hwy 7 over East Don River. Alternative B6 – No new crossings or widened crossings required. With the inadvertent omission of listing the watercourse crossings from Table 8.3-2 in the EA report, the selection of Alternative B6 as the Technically Preferred Alternative does not change		h) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
		14 cont'd	i) The transitway station on Fig 9-60 should be removed from the Rouge Valley corridor and regional floodplain. The note provided does not sufficiently indicate that the station location must be outside the valley corridor and floodplain.	i) During detailed design, the Region will refine the station location and design solution to meet TRCA requirements for protection of the valley corridor and flood plain based on a detailed survey of site conditions.		i) Status – Completed A Cedarland Alignment Modification Report has been finalised following receipt of MOECC and TRCA comments. H3 Design provides for a station on Cedarland Drive.		Yes	Closed (2014)	
			j) The Stormwater Management Preliminary Assessment provided in Appendix G is not sufficient to confirm that an effective stormwater management system for the transitway can be provided, and therefore the “insignificant” level of impact to water	j) The Proponent will commit to working with the TRCA during preliminary and detailed design to ensure that the stormwater management plan provides a net improvement in water quality of the receiving watercourse. Opportunities to include treatment for this undertaking with		j) Status –Completed This commitment is carried through the TRCA permit application process for each of the river crossings that is currently underway. See Item #38 for		Yes	Closed (2014)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			<p>quality assumed in Table 10.4-3 cannot be confirmed. The material provided in Appendix G does not confirm the locations and availability of land for stormwater management measures and for many segments of the transitway no stormwater management measure are proposed. The consultant presents an argument to explain the latter in Appendix G as follows: "The existing roadway runoff has a greater impact on the downstream watercourses that the potential increase in runoff due to the proposed transitway. Stormwater management in urbanized areas should, therefore, be developed as part of an initiative to provide treatment on a watershed basis rather than trying to manage the incremental change resulting from the proposed transitway. This type of initiative would be separate from the current environmental assessment for the Hwy 7 Corridor Public Transit Improvements."</p> <p>This rationale does not justify that lack of proposed treatment for portions of the transitway, as it is the objective of the TRCA to obtain a net benefit in water quality treatment for all new transportation infrastructure projects. Deferring the fulfillment of treatment of this objective to large scale initiatives for urban stormwater retrofit, as the consultant suggests, is not acceptable, as it has been shown to be significantly more difficult and costly to provide stormwater treatment in a retrofit context than incrementally during the design and construction of new infrastructure. Therefore, the Proponent should demonstrate that stormwater measures for the transitway can be provided that will provide a net improvement in water quality in the receiving watercourses. The appendix should be revised to address stormwater management for all sections of transitway that will be service by each measure. It may be useful for the consultant to review the recent EA report for the Markham Bypass (southern portion) being prepared by the Regional Municipality of York, as it contains an appendix that addresses stormwater to a comparable level of detail as is expected in the response to the above comments.</p>	<p>broader infrastructure initiatives will be reviewed during the design phase. The proponent agrees that deferring the fulfillment of treatment of this objective is not acceptable. Additional information regarding the Stormwater Management Preliminary Assessment is included as supplementary information with this response to TRCA[1-3].</p>		reference [3]				

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		14 cont'd	k) Suitable information has not been provided to confirm that impacts to the terrestrial passage at stream crossings will be "insignificant", after mitigation, as indicated on Table 10.4-3 under Objective C2. In particular, the extension of existing crossings may significantly reduce the potential for wildlife use, and these effects cannot be entirely mitigated with the types of measures proposed, particularly as the option of "increasing vertical and horizontal clearances" is not available for the extension of existing crossings. In the absence of additional information, the level of significance after mitigation for this item should be ranked as at least "moderately significant".	K) Culverts/bridges that will not be replaced for transitway insertion in the roadway cross-section will be investigated further during detail design to formulate site-specific retrofit opportunities to enhance wildlife passage. The culvert extensions required are not expected to impede significantly or improve wildlife passage under Highway 7. As suggested by TRCA, the level of significance after mitigation can be considered to be moderate in the absence of additional information to be provided during the design and permit approval phase of the project. [1-5]		k) Status – Completed TRCA permits for all impacted designs at watercourses are being obtained and include CV1 and CV2 which have been obtained [1,2] and ones currently under review by TRCA that include Apple Creek, CV3 and Warde[3,4,5]. TRCA permits for Apple Creek, Beaver Creek (CV3) and Warden were approved [3, 4, 5].		Yes	Closed (2014)	
			l) The monitoring frequency in Table 11.4-1 for "effect of construction on water quality and quantity in watercourses" should be revised to indicate that [1] monitoring should occur after every major storm event.	l) Comment noted and will be carried forward to the design and construction phase of the project.		l) Status – Completed The Environmental Management Plan indicates the following: "Prior to any forecasted precipitation event, the Environmental Coordinator or designate will inspect all sediment control measures to ensure they are not close to the sediment handling capacity. If required, sediment will be removed or maintenance performed. During and after prolonged rain or snow fall events the sediment control measures will be monitored to ensure they are functioning as intended and are not overloaded. If required additional measures will be installed at the direction of the Environmental Coordinator." (Reference Appendix A, Erosion and Sediment Control CEMP, Section 3.4 "Precipitation Events"). KED completes both 'Weekly Environmental Inspections' & Pre / Post Rain Inspections. In the event that an issue or deficiency was noted during either inspection KED Environmental would notify the construction team, and would ensure that immediate corrective actions are taken.		Yes	Closed (2015)	

Appendix 2 Action for Comments Received from the Government Review Team on the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		14 cont'd	m) The discussion of water quality and quantity monitoring in Table 11.4-2 is not satisfactory as the monitoring methods and frequency are not appropriate for the monitoring purposes. Specifically, monitoring of sediment accumulation in stormwater management facilities will not indicate the effect of snow and ice removal in corridor watercourses. It is recommended that separate monitoring items be developed for sediment accumulation, stormwater management facilities and impacts of snow and ice removal. Water quality impacts of snow and ice removal, as well as regular transit operations, should be monitored by measuring chlorides, suspended sediment, and other water quality parameters, at the outlets of the various stormwater management facilities during both storm and snowmelt events. The accumulation of sediment in stormwater management facilities should be monitored by measuring the accumulation at a reasonable interval based on the expected sediment loading and storage capacity of the facility. Table 11.4-2 should be revised accordingly.	m) The Region will develop a detailed monitoring program covering all aspects noted during detailed design in consultation with TRCA. All required measurements, specifically to assess the effect of the transitway insertion, will be included in the monitoring program.		m) Status – Completed Aspects noted are for operational stage. An Environmental Control Plan will be developed during detailed design. Current York Region road maintenance practices dictate that all York Region Oil-Grit Separators are inspected annually for sediment accumulation, servicing and cleaning. [1] York Region monitors water quality via the MOECC's provincial stream water quality monitoring program. York Region is notified of any concerning water quality parameters and chloride levels by the MOE and will work closely with the MOE to address any concerns resulting from transit and maintenance operations.[2]	https://www.ontario.ca/environment-and-energy/map-provincial-stream-water-quality-monitoring-network	Yes	Closed (2016)	[1] is closed in 2015. [2]Evidence was provided to support the assertion that MOECC is monitoring water quality in H3 Item is closed.
		n)	It has been correctly identified that all culvert and bridge extensions or widenings may result in the Harmful Alteration, Disruption or Destruction of fish habitat and that compensation under the Fisheries Act may be required. At the detailed design stage, TRCA ecology staff will review all culvert/bridge modifications, and will require that: a) Any potential impacts are mitigated whenever possible; b) Effective sediment and erosion controls are provided; and c) There will be a net benefit to the aquatic a floodplain system. Please note that it is possible that additional watercourses may be identified during detailed design stage, and that a TRCA permit and review under Fisheries Act, along with all other applicable legislation may apply.	n) Comment noted to be carried forward to the detailed design phase (as noted in section 11.2.1, the requirement for TRCA permits are identified as part of post-EA approval activities)[1-5].		n) Status – Completed TRCA permits for all impacted designs at watercourses were obtained and include CV1 and CV2 [1,2] Apple Creek, CV3 and Warden. [3,4,5] TRCA permits for Apple Creek, Beaver Creek (CV3) and Warden were approved [3,4,5] At a meeting on June 24, 2010, TRCA staff indicated that, based on the information provided, the effects of the proposed works in these segments could be mitigated and that consequently, a Letter of Advice would be acceptable as a HADD should not result at any crossing.[6] The LOAs are attached to the permits referenced in Item 38.		Yes	Closed (2014)

		14 cont'd	o) Note that the tributary at station 541+300 (approx.) is being relocated to the east. Please contact Leslie Piercey for more information.	o) Comment noted to be carried forward to the detailed design phase (as noted in section 11.2.1, the requirement for TRCA permits are identified as part of post-EA approval activities).		Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			p) Impacts to groundwater resources will need to be addressed in greater detail, particularly in terms of construction related impacts from any required dewatering. Studies will be required to identify quantities, durations and zones of influence associated with aquifer depressurization or dewatering, along with any other environmental impacts that may be anticipated. Mitigation plans will be needed to protect any associated natural heritage features and groundwater related resources. Areas of particular concern have been identified within the EA report (between Hwy 400 and Jane St, and Hwy 404 and McCowan Rd), however, groundwater resources and the features dependent on them will need to be identified and protected throughout the entire corridor during the detailed design phase.	p) Comment noted. [1] The impacts on groundwater resources and the features affected by them, throughout the entire Highway 7 Corridor, will be identified during the detailed design phase when the extent of any dewatering is known. [2] Mitigation plans will be developed to provide the necessary protection for natural heritage features and groundwater related resources in consultation with TRCA and other appropriate authorities.[3]		p) <u>Status-Completed</u> Pavement Design Report - Section 4.2.2 "Groundwater" notes that "...Free water was not encountered in any of the boreholes." No requirement for dewatering has been identified so far during the H3 PE design phase. Dewatering requirements will be reviewed during Detail Design and if required, appropriate mitigation plans will be developed. Five (5) areas for dewatering were identified and Permits to Take Water including mitigation and monitoring plans were approved by the Ministry of Environment. [1,2]		Yes	Closed (2014)	
			q) Please note that the area identified for the Vaughan North-South Link (between Hwy 400 and Jane St) is an area of shallow or upward groundwater movement. This is an issue that will need to be addressed by TRCA's hydrogeologist at the detailed design phase.	Comment noted. TRCA's hydrogeologist will be contacted during the detailed design phase.		q. Status – Does not apply to the H3 segment		Yes	Closed (2014)

			z) In general, the EA omits reference to other potential east-west or north-south arterial corridors for rapid transit in future in south York Region.	z) The modeling of future rapid transit ridership has assumed enhanced transit service on parallel arterial routes in both the east-west and north-south directions.		z) Status – Does not apply to the H3 segment		Yes	Closed (2014)	
Borden Ladner Gervais LLP	Mr. Stephen Waque	2	a) Counsel for property owners whose lands are located on the north side of Centre St, between New Westminster Dr and Dufferin St. It appears to their client that the analysis being undertaken is still defective in that it fails to recognize and implement the policies set out in City of Vaughan OPA 672. In particular, policies numbered 8 and 9 in that OPA. The lawyers would appreciate specific acknowledgement of their client's concerns and a specific response indicating how the Proponent will address them. The following are the excerpts from the City of Vaughan OPA 672: <i>OPA 672 – Section 8</i> notes that amending OPA#210, Section 2.2.3.6, General Commercial Areas, by adding the following paragraph to subsection b): "Council consideration should be given to broadening the permitted retail and service commercial uses within an implementing zoning by-law and definitions to allow a greater range of commercial uses which reflect evolving consumer needs without imposing negative impacts on neighbouring residential areas." <i>OPA 672 – Section 9</i> notes that amending OPA#210, Section 2.3.6 by adding the following paragraph: "That the Region of York recognize the importance of maintaining full movement access to the existing commercial centres on the north side of Centre St between Vaughan Blvd and New Westminster Dr, and reflect this in the planning for any transit facilities in the Centre St Corridor between Bathurst and Dufferin St."	a) As shown on Figure 9-35 of the EA report, a full movement intersection (signalized) has been shown conceptually providing access to the lands north of Centre St between Vaughan Blvd and New Westminster Dr. As noted on Figure 9-35, the final location of the full movement intersection will be determined during detailed design and in consultation with affected property owners.	York Region	Status – Does not apply to the H3 segment		Yes	Closed (2014)	
			<i>OPA 672 – Section 9</i> notes that amending OPA#210, Section 2.3.6 by adding the following paragraph: "That the Region of York recognize the importance of maintaining full movement access to the existing commercial centres on the north side of Centre St between Vaughan Blvd and New Westminster Dr, and reflect this in the planning for any transit facilities in the Centre St Corridor between Bathurst and Dufferin St."					Yes	Closed (2014)	
	Mr. Lloyd Helferty	3	a) The entire length of the proposed transitway should include, for both environmental and health reasons, the accommodation of additional space along the transitway corridor for safe and "continuous" passage of non-motorized vehicles, particularly	a) Detailed comment noted and will be carried forward for consideration during development of the detailed streetscape plan (Section 9.1.1 of the EA report describes the conceptual streetscape plan). As identified on Figures 9.1-2 to 9.1-10, a 2.0 m sidewalk is	York Region	a) Status – Completed The DBCR incorporates streetscaping recommendations: Streetscape Design Guidelines (Section 4.8), General Guidelines (Section 4.9), etc. Consultation		Yes	Closed (2013)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			bicycles, foot traffic and other human-powered or small-capacity vehicles (e.g. scooters or segways). The path would be a positive environmental benefit to the users of the traffic corridor because the users of the transit corridor could choose, on those days which have appropriate weather for alternate modes of travel, to safely use a pathway instead of a private vehicle or public transit (which itself uses internal combustion technology and is beneficial in reducing emissions but does not eliminate them). A pathway along the transit route could significantly reduce both the traffic congestion along the corridor as well as reducing the emissions that would otherwise have resulted from elimination of the use of an additional vehicle on the road. "Continuous" meaning the pathway should not be broken along any section because of incompleteness or obstruction (such as highway bridges), and should allow the passage of small/light vehicles without the users of such a path having to resort to simultaneous use of the same roadway as heavy vehicles.	proposed along each side of the transitway/road corridor for pedestrians. As shown on Figures 13.9-3 to 13.9-5, a 3.0 m bicycle path is proposed from Warden Ave to east of Sciberras Rd and has been developed in consultation with the local municipality. The local municipality has jurisdiction over bike paths. At the time of detailed streetscape design, York Region will continue to work with local municipalities to incorporate additional streetscape facilities and bicycle access to stations where feasible.		with municipalities commenced as described under item 33 of this document. Best practice Active Transportation principles have been incorporated into the design philosophy of the VivaNext system. Dedicated bicycle lanes have been provided along the H3 corridor[1]. [2] A 2 m-wide sidewalk has been provided throughout the corridor that is: pedestrian accessible, obstruction free and in compliance with AODA guidelines. Pedestrian amenities such as benches, bike racks, lighting, and trash bins have also been provided.				
	Mr. James Puddy	4	a) Mr. Puddy mailed letters concerning the meetings at Markville on September 19, 2003 and September 17, 2004 and had no replies. He went to the Markham Town Centre to review the EA report and noticed that there were eighty replies from the total of twelve meetings and did not see his letter of September 19, 2003, although his letter of September 17, 2004 was recorded. The following are his comments on the EA report.	a) It appears that the Rapid Transit Program Office inadvertently omitted to acknowledge receipt of Mr. Puddy's letters and respond to the comments contained in them. However, the comments were taken into consideration in evaluating alternatives and developing the preferred design for the undertaking. The responses below indicate how his comments were addressed in the EA report.	York Region	a) Status – No Action Required.		Yes	Closed (2013)	
			b) The transit lane should be in the curb lanes with the transit stops at the far side of the traffic control intersections.	b) Curb side transit lanes were considered in the EA report (refer to Section 5.4.1, Alternative Locations within a Road r.o.w.). Table 5.4-1 provides an evaluation of the alternative locations for the transit lanes, with a median transitway identified as the preferred location. The typical station layout includes far side stops at intersections with traffic and pedestrian control signals (refer to Figure 7.3-1).		b) Status – No Action Required.		Yes	Closed (2013)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			c) The transit lanes should run straight along the corridor with a subway or overpass at the GO crossing and not detoured up and down to the GO station where the trains operate approximately two hours each direction on working days.	c) Alternative routes and alignments were considered and evaluated in the EA (refer to Section 5.3.1, Analysis and Evaluation of Alternative Technology/Route Combinations and Section 8.3, Development of Segment Alignment Alternatives). In addition to inter-connectivity with GO Rail services, the routing selected serves the planned mixed-use Markham Centre where significant transit-supportive development is planned.		c) Status – No Action Required.		Yes	Closed (2013)	
			d) The raised transit lanes will separate the corridor into a north and south side of the community requiring at each traffic control intersection numerous traffic light functions such as through, right, left and U-turns.	d) As noted in Section 9.1.1 of the EA, a streetscape concept has been developed in consultation with local municipalities to be a catalyst for transit-oriented development and attract transit ridership by creating a pedestrian friendly environment. The effect on traffic operations was considered in the evaluation of options to locate a transitway in a roadway (refer to Table 5.4-1) and the analysis of traffic conditions during operation of the transit service (refer to Chapter 10). In addition, traffic operations will be monitored during rapid transit operations as noted in Table 11.4-2.		d) Status – No Action Required.		Yes	Closed (2013)	
		4 cont'd	e) Comments b through d will increase gridlock, pollution, safety and will affect the community environment (surroundings).	e) Environmental criteria for assessing the effects of the undertaking on congestion, pollution and safety are included in Section 10.4 - Analysis of Environmental Effects and Mitigation, of the EA report.		e) Status – No Action Required.		Yes	Closed (2013)	
			<i>Comments from PCC#4, September 17, 2004</i> f) Mr. Puddy spoke to a representative of Lynton Erskine at the Markville Mall presentation on September 17, 2004. He does not consider the present plan will enhance the quality of life in the Hwy 7 Corridor.	f) Protecting and enhancing the social environment in the corridor was a key objective in the development of the undertaking (refer to Chapter 1 and Chapter 10, Table 10.4-2).		g) Status – No Action Required.		Yes	Closed (2013)	
			g) The transit lanes should be in the curb lane of Hwy 7 corridor with stops at the far side of intersections	g) Curb side transit lanes were considered in the EA report (refer to Section 5.4.1, Alternative Locations within a Road r.o.w.). Table 5.4-1 provides an evaluation of the alternative locations for the transit lanes, with a median transitway identified as the preferred location. The typical station layout includes far side stops at intersections with traffic and pedestrian control signals (refer to Figure 7.3-1).		h) Status – No Action Required.		Yes	Closed (2013)	
			h) The level crossing on Hwy 7 in Unionville should have an underpass allowing safe passage for GO trains and Hwy 7 traffic which was done at Finch Ave, west of Leslie St.	h) Comment noted. Refer to Figure 9-63 of the EA report which shows a proposed underpass for the transitway crossing of the GO Stouffville line.		g) Status – No Action Required.		Yes	Closed (2013)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			i) The transit line in the middle of Hwy 7 corridor with its left and U-turns at intersections are not safe and convenient for pedestrians or vehicles contributing to gridlock and pollution. The transit line should not be detoured off the Hwy 7 corridor to the GO station for four trains each way on working days.	i) Refer to responses c and d above.		h) Status – No Action Required.		Yes	Closed (2013)	
			j) The primary purpose of what used to be a provincial highway was for the movement of goods, people and services and should be the main function of this arterial road serving a commercial area.	j) The purpose of the undertaking is presented in Section 1.2.2 of the EA report. The existing Social Environment is described in Section 6.3 and includes a wide range of adjacent land uses		i) Status – No Action Required.		Yes	Closed (2013)	
		4 cont'd	<i>Comments from PCC#3, September 19, 2003</i> k) The preferred plan for enhancing the quality of life in the Hwy 7 corridor is similar to the Spadina Ave transit in Toronto and Mr. Puddy does not consider that the Toronto system meets any of our criteria for the proposed plan.	k) Comment noted. Analysis and Evaluation of Alternatives to the Undertaking is provided in Chapter 3 of the EA report.		j) Status – No Action Required.		Yes	Closed (2013)	
			l) Mr. Puddy suggests that the preferred plan for all purposes would be better located in either the hydro or 407 corridors.	l) Alternative alignments (including Hwy 407 and sections of hydro corridors) were considered in the EA (refer to Section 5.1, Rapid Transit Corridors).		k) Status – No Action Required.		Yes	Closed (2013)	
			m) The rapid transit line in the centre of the Hwy 7 corridor would not contribute to the safety and convenience of pedestrians or other users. The detouring of the transit line off the corridor to connect with the GO station for only 10 trains on working days.	m) Alternative alignments (including Hwy 407 and sections of hydro corridors) were considered in the EA (refer to Section 5.1, Rapid Transit Corridors).		l) Status – No Action Required.		Yes	Closed (2013)	
			n) The transit line should be built in the curb lanes and an underpass built at the Hwy 7 corridor and the GO level crossing which would allow passengers to transfer to the GO trains and provide a safe Hwy 7 corridor by eliminating a level crossing.	n) Alternative alignments (including Hwy 407 and sections of hydro corridors) were considered in the EA (refer to Section 5.1, Rapid Transit Corridors).		m) Status – No Action Required.		Yes	Closed (2013)	
	Ms. Gloria Boxen	5	a) Ms. Boxen welcomes the Region's decision to improve transit but is concerned about the Region's inability to address land use planning where it works against good transit and community development and when it doesn't dare to hope that people will get out of their cars and walk.	a) Approval of site plan development is a local municipal jurisdiction and subject to the Ontario Planning Act, as well as conformance with land use as provided in the York Region Official Plan. The Region is also undertaking a Centres and Corridors Study to facilitate development of both the Regional Centres and Corridors with more intensive development supporting transit ridership (the Region's planning initiatives are briefly described in Section 12.1.1 of the EA report).	York Region	a) Status – No Action Required.		Yes	Closed (2013)	
			b) The evaluation and comments provided are based on the following principles: 1) Efficient use of resources, existing infrastructure, land, energy, and	b) Comment noted. Many of the factors noted here have been included throughout the EA (Chapter 5 - Alternative Methods of Improving Public Transit, Chapter 7 –		b) Status – No Action Required.		Yes	Closed (2013)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			most direct route to service the most people and destinations, with least environmental impacts; 2) Promotes health, reduces air, water and soil pollution by reducing the use and need for private vehicles, and promotes walking and cycling; 3) Other environmental concerns – Decreases the need for paved and other impervious surfaces and reduces flood potential. Increases vegetation to reduce runoff, provide shade, filter pollutants, and absorb CO2. Reduces greenhouse gas emissions and moderated the effects of climate change; 4) Promotes community health – stops and terminals are located near centres of activity. Accessible to all residents in geographical sense and to those with physical handicaps. Inclusive of residents regardless of age and economical status; and 5) Convenience.	Planning and Design Parameters, Chapter 8 – Development and Selection of Preferred Design, and Chapter 10 – Assessment of the Undertaking).						
		5 cont'd	<i>Current Events</i> c) Ms. Boxen presumes that the study does not include the impacts of the construction of the additional lanes on Hwy 407 in the central portion that are exempt from environmental assessment. These impacts should be added to those calculated for any added lanes to Hwy 7.	c) The widening of Hwy 407 is not included as part of the proposed undertaking and not under the jurisdiction of York Region.		c) Status – No Action Required.		Yes	Closed (2013)	
			d) Does the study take into account today's world? The world has changed since the study commenced. Gas prices have gone from cheap to a point where people are actively looking for other means of transportation such as walking and cycling, as well as transit.	d) Comment noted. The undertaking will have a positive effect on improving mobility as noted in Table 10.4-1 of the EA report.		a) Status- Complete During Detail Design cross sections have been adjusted where possible to provide for bicycle lanes and maximize median green space. Viva Next is a complete street that accommodates the needs of all users: pedestrians, cyclists, transit users, and motorists.		Yes	Closed (2013)	
			e) Price volatility has mirrored the weather's volatility. Scientists have predicted the weather extremes and severity would increase with increased greenhouse gases and climate change.	e) Comment noted. As noted in Table 10.4-3 of the EA report, the recommended undertaking will have a net positive effect on local and Regional Air Quality.		b) Status- No Action Required		Yes	Closed (2015)	
			f) Decreasing the permeable surfaces through increased road pavement and loss of greenspace helps to increase the risk of flooding. If we are to implement infrastructure changes to accommodate rapid transit, they must be taken from existing paved surfaces or be in the form of rail. In August there	f) Comment noted. As noted in Table 11.3-1 (I.D. #5.1) of the EA report, the Proponent will develop a detailed storm water management plan during the detailed design phase of the proposed undertaking.		c) Status – Completed A Final Drainage Study has been prepared during PE design and outlines the storm water management plan for the H3 Segment.		Yes	Closed (2010)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			was local flooding in basements in Thornhill and North York. Finch Avenue near Jane Street was washed out at Black Creek. Look again at the calculated impacts of increased river crossings and determine if they are realistic in view of what happened in August.							
			<i>Road Capacity</i> g) Four lanes of road at capacity is not a signal to add additional lanes of road. Rather they are an indicator for increasing road efficiency by adding more public transit, separated bike lanes and sheltered sidewalks. This is the point at which travel demand is high enough to support these alternative modes of transportation and opportunity to reduce car dependency. If instead road capacity is increased by adding more lanes, induced traffic demand results as it becomes initially easier to drive to further destinations, perhaps permanently changing travel patterns. Time, not distance, determines how far we go. If travel distances double, traffic volumes double. The above principles are achieved by focusing on people, not cars and to move people and goods, not cars and trucks.	g) Comment noted. The recommended undertaking is predominately transit related infrastructure (as described in Chapters 9 and 12 of the EA report). Proposed road widening from Lunar Crescent (east of Woodbine Ave) to east of Sciberras Rd is presented in Chapter 13 of the EA report. The Region's Transportation Master Plan (June 2002) includes a multi-modal strategy for dealing with travel demand in York Region to 2031, including significant planned transit infrastructure as well as road improvements.		d) Status – No Action Required		Yes	Closed (2010)	
		5 cont'd	<i>Infrastructure</i> h) First build infrastructure that promotes convenience and safety for pedestrians and cyclists. Provide covered, separated bikeways [1] and sidewalks [2] along major arteries to allow the option of walking and cycling for commuting and doing errands. Provide covered bike lockers [3] for bicycle storage near transit stations and bike racks [4] on transit.	h) Safety and convenient access/mobility were important criteria used in the development of the undertaking (see Tables 10.4-2 and 10.4-4 of the EA report). Figures 9.1-2 to 9.1-10 present typical cross-sections for the transitway that include pedestrian sidewalks on each side of the r.o.w [1,2]. A conceptual streetscape plan is described in Section 9.1.1 – Transitway Elements. During the development of a detailed streetscape plan and transit station design, specific features such as bicycle storage will be considered. [3,4]		e) Status – complete [3,4] The DBCR incorporates streetscaping recommendations and bicycle storage recommendations for transit stations: Streetscape Design Guidelines (Section 4.8), General Guidelines (Section 4.9), Bicycle Racks (Section 4.11), etc. Further attention will be given to the development of a streetscape plan in Detail Design. [4] In H3 DD, bicycle racks have been provided at all signalized intersections including YRT stops. [2011 ACR] [1] For most of the route, Detail Design includes the addition of bike lanes [1]. [1] For most of the route, Detail Design includes the addition of dedicated bike lanes. Pedestrian environment is addressed in the		Yes	Closed (2013)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
						Streetscape Design plans[2].				
			<i>Land Use and Development</i> i) Reducing of car use and dependency is achieved by a land use that promotes walking and cycling. Compact, mixed-use development reduces car needs. Six to ten lanes of traffic and buildings opening onto parking lots rather than streets works against reducing car dependency and safety for pedestrians and cyclists. Researchers are examining the connection between community design, physical exercise and transit use, and are finding that pedestrian friendly environments promote walking and the use of transit. Examine land use and transportation through the eyes of children.	i) As described in Section 9.1.1 – Transitway Elements, a streetscape plan has been developed for the transitway that would be a catalyst for transit-oriented development and attract transit ridership. In addition, as described in Section 12.1.1, York Region is undertaking a number of land use planning initiatives to facilitate development of both the Regional Centres and Corridors with more intensive development supporting transit ridership.		i) Status- Complete The DBCR incorporates streetscaping recommendations as described in (h) above.		Yes	Closed (2012)	
			<i>Conclusion</i> j) Expensive infrastructure for rapid transit is unnecessary to get people out of cars and onto buses. For example, the Yonge GO Bus has been well used for decades. When high demand transit is established, then concentrate on rapid transit with its own r.o.w. Transit is well used when there is connectivity to the surrounding community. Unless it is a subway, transit on its own r.o.w. is isolating. With people now actively looking for options to driving, it is an opportune time to present residents with a convenient system of public transit that provides excellent service.	j) The analysis and evaluation of Alternatives to the Undertaking is presented in Chapter 3 of the EA report and includes consideration of local transit service improvements and GO Transit improvements. York Region Rapid Transit Corridor Initiatives was selected as the preferred alternative as described in Table 3.2-1 of the EA report.		j) Status – No Action Required		Yes	Closed (2012)	
		5 cont'd	<i>Recommendation</i> k) It is imperative that we reduce pollution and car use in the GTA for health and safety of our children and unborn grandchildren. Change the streetscape first. Along Hwy 7, add continuous sidewalks and separated, covered bike paths, street-facing buildings with bike racks, litter receptacles, shade	k) Chapter 1 of the EA report sets out the fundamental objectives of the undertaking which encompass many of the recommendations of Ms Boxen. As described in Chapter 9, the recommended undertaking includes a streetscape plan that will attract transit ridership within a pedestrian friendly corridor. As noted in Table 10.4-3,		k) Status –completed The DBCR incorporates streetscaping recommendations as described in (h) above.		Yes	Closed (2012)	

Appendix 3 Action for Comments Received from the Public on the Yonge Street Corridor Public Transit Improvements Environmental Assessment Final Report					Compliance Monitoring			Compliance Review		
Representative	Name	#	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
			trees and benches. The lanes are too wide – they encourage speeding. Take the room for the bike lanes from the existing roadways. Place a treed median down the centre of Hwy 7. Once transit ridership is sufficiently high, examine other infrastructure changes. Implement changes with little disruption of the environment as possible. Perhaps, opportunities for environmental rehabilitation will emerge. Examine Portland Oregon's rapid transit system. It goes from being on its own surface r.o.w. in the suburbs, to a subway, to a system in mixed traffic stopping at ordinary street corners, to a track on its own city street. It is connected in the city to the street and pedestrians.	the recommended undertaking will have a net positive effect on local and Regional Air Quality. The expected environmental effects and mitigation are identified in Tables 10.4-1 to 10.4-4 in the EA report.						
			<i>Other comments</i> l) When rapid transit is implemented on Hwy 7, there should still be a good local Hwy 7 bus service accessible to all residents. For example, there should be stops at Hunter's Point, west of Yonge St and Silver Linden, east of Yonge St.	l) Detailed comment noted. As noted in Table 10.4-1, compatibility with proposed local transit network will be monitored.		l) Status – No Action Required		Yes	Closed (2012)	
			m) Parking at the Bathurst connection ramp represents the loss of more pervious surface close to the East Don River. A good transit system should require only as bare minimum of commuter parking.	m) The bus platforms and parking facilities (shown on Figure 9-40) at the Bathurst St Connector Rd are identified as future 407 Transitway Facilities and are not part of the recommended undertaking. These facilities will be planned and assessed under a future EA for that undertaking.		m) Status – Does not apply to the H3 segment		Yes	Closed (2012)	
		5 cont'd	n) Vaughan Link to Spadina Subway – ensure that Black Creek is minimally avoided, keeping in mind the August flooding.	n) Minimizing adverse effects on aquatic ecosystems is included in the assessment Table 12.6-3 (Goal C1) in the EA report.		n) Status – Does not apply to the H3 segment		Yes	Closed (2012)	

Appendix 4 Cedarland Alignment Modification Report - Table 6-1 - Effects and Mitigation for the Modified Alignment														Compliance Review

Representative	Name	No.	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
				<p>Drainage for this section was provided as part of a drainage master plan for the Clegg Road/Cedarland Drive area. The existing sewer has a direct discharge to the Rouge River. There is an existing storm water pond to the south of the storm outlet that was built after the storm sewer. Due to differences in elevation, the storm sewer outlet could not be included in the pond. The transitway will continue to discharge to the existing storm sewer on Town Centre Boulevard. (Proposed discharge to the existing storm sewer on Town Centre Boulevard from Highway 7 to Cedarland Drive would not change with the Cedarland alignment modification since this segment of the transitway is the same as the original alignment.)</p> <p>5.2.33 Markham Centre Alignment - Town Centre Boulevard to Warden Avenue (Sta. 540+070 to Sta. 540+450) This alignment crosses the Rouge River floodplain and consists of two 3.5 m wide transit lanes with a 0.5 m shoulder. Rather than a storm sewer system, individual outlets to the vegetated area adjacent to the transitway are proposed for this section. (Since the new alignment is proposed along Cedarland Drive rather than in a new transit only corridor across the Rouge River (see EA figure 9-60), the drainage will likely be into the storm sewer on Cedarland Drive. This would have to be confirmed during development of the detailed Storm Water Management Plan in conjunction with detailed design of the transitway. See detailed response below.)</p>		<p>existing sewer. The H3 Detail Design maintains the existing sewer system on Cedarland Drive. Final Issued For Construction (IFC) drawings have been issued on this basis.</p>				

Appendix 5 Action for comments received on the Final Cedarland Alignment Modification Report - Pertaining to the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment (March 2010)					Compliance Monitoring			Compliance Review		
Representative	Name	No.	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
		4	Does original EA or will SWM plan include these components: a) A written commitment by the municipality of long-term maintenance/ownership of the Stormwater Management System(s) b) "Oil and grit separators shall be installed at all strategic locations to intercept stormwater run-offs and washings from stations and intersecting transit sections". c) "Post construction monitoring shall include regular TSS and heavy metals scan (semi-annual) of the discharged stormwater to the receiver, depending upon the sensitivity as determined by the Ministry. d) "monitoring of baseflow to surface water courses from the SWM ponds shall be undertaken for TSS & Temperature on a regular basis; and salt content (ionization potential) and heavy metal scan on semi-annual basis" as may be applicable.	As noted above, a Storm Water Management Preliminary Assessment was provided in Appendix G of the approved EA and describes a SWM Concept Plan by transitway section. The EA (Table 11.3-1 on page 11-2) includes a commitment to develop a detailed Storm Water Management Plan in accordance with MOE's guidelines. The commitment also indicates that the Storm Water Management Plan will outline monitoring and maintenance requirements for SWM facilities constructed as part of the undertaking. The 2009 Annual Compliance Report (page 17) tracks the compliance of the commitment related to surface water resources. The ACR indicates that a draft Storm Water Management Plan has been prepared during preliminary engineering and will be finalized in the detailed design phase. MOE is listed as a potentially interested agency in Table 11.3-1 of the EA and therefore will be consulted. I will forward this e-mail to the design team at Rapidco to ensure they consult MOE Technical Support at the appropriate stage with regard to the Storm Water Management Plan.	York Region	Status – Completed See Item 6 b) below		Yes	Closed (2015)	
		5	You don't mention noise –it will be closer to future sensitive receptors-can you confirm no increase in 5dba?	Based on the noise assessment undertaken in the original EA, we can conclude that the noise threshold will not be reached for the Cedarland Drive alignment. The proposed alignment is along the south side of Cedarland Drive, directly adjacent to lands designated for business park (not a sensitive receptor). The lands designated for mixed use (along the east side of Town Centre Boulevard and north of Cedarland Drive) are closer to the transitway along Town Centre Blvd (in the median of the road) as opposed to along Cedarland Drive (running along the south side of the road). The EA does not	York Region	Status – Completed See Item 6 c) below		Yes	Closed (2015)	

Appendix 5 Action for comments received on the Final Cedarland Alignment Modification Report - Pertaining to the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment (March 2010)					Compliance Monitoring			Compliance Review		
Representative	Name	No.	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
				<p>recommend consideration of noise mitigation except for the section along the Civic Mall within the Markham Town Centre (east of Warden Avenue) where the transitway will run within a pedestrian/transit corridor rather than within a road corridor as is the case for the remainder of the transitway, including along Cedarland Drive. In Table 10.4-2 of the EA (page 10-16), the following wording is included in the further mitigation column - "Depending on lower floor building uses, may require noise screening along transitway and/or noise control features in residential design along Civic Mall segment in Markham Centre area". The Noise and Vibration Impact Assessment is included in Appendix K of the EA and includes the following wording:</p> <p>5.2.1 Bus Transit Noise Impact Table 5.6 compares the traffic noise levels for Scenario 1 with those of Scenario 2. The data indicate that for all road segments, except for the Town Centre Boulevard South Alignment (future Markham Centre area), only a very small (0 to 2 dB) increase in sound levels will be experienced by the closest receptors due to the bus transit option in all road segments along the preferred route of the Highway 7 Corridor. This reflects the minimal contribution of YRTP bus transit volumes as compared to the very high baseline traffic volumes.</p> <p>Daytime sound levels at the future Markham Centre location are predicted to increase by about 8 dB and nighttime by 6 dB. This is due to the fact that transit will be the only traffic in the immediate vicinity of the Mall. As noted earlier in Chapter 3, mitigation measures are to be considered at this location as the exceedance above the predicted background sound level</p>						

Appendix 5 Action for comments received on the Final Cedarland Alignment Modification Report - Pertaining to the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment (March 2010)					Compliance Monitoring			Compliance Review		
Representative	Name	No.	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
				as expected to be greater than 5 dB. Housing proposed for the Markham Centre area will most likely consist of low-rise condominiums. In areas where the noise impact exceeds the applicable criteria, warning clauses and mitigation measures such as site planning, architectural design, special building components and/or central air conditioning may be necessary.						
		6	I had previously reviewed the EA and I am aware of the requirements, however the change to the route onto to Cedarland is not addressed in the EA. It is not clear from your response whether my questions have been answered. I assume the following components and recommend the Addendum report address these items: a) Archaeological Resources Based on the findings in the EA, there is a potential for Archaeological resources associated with the Cedarland alignment hence the phase II archaeological assessment required in the EA will also include this portion of the alignment.	Technical Memorandum titled "Hwy 7 Corridor and Vaughan N-S Link Public Transit Improvements Environmental Assessment - Cedarland Alignment Modification - Response to MOE Comments of March 23, 2010 - December 15, 2010" addresses these items as follows: a) Archaeological Resources Provision has been made in the H3 Detail Design Final Work Plan for a Stage 2 Archaeological Assessment of all areas within the H3 project that were identified as having archaeological potential in the Stage 1 Archaeological Assessment (Appendix J of the Hwy 7 Corridor and Vaughan N-S Link Public Transit Improvements Environmental Assessment), as well as areas of the Cedarland Alignment Modification, as required.	York Region	Status – Completed A Stage 2 Archaeological Assessment was undertaken for the H3 segment and concluded that a Stage 3 archaeological Study was required for the historic Brown's Corners Cemetery with a Cemetery Investigation to be undertaken in the Highway 7 ROW in front of the cemetery. The Stage 2 Assessment also concluded that no additional archaeological assessment is required for the remainder of the study corridor and these areas can be considered clear of further archaeological concern. The Stage 3 Archaeological Assessment (Cemetery Investigation) at Brown's Corners United Church Cemetery found that all lands in the public Highway 7 ROW in front of the Brown's Corners Cemetery can be considered clear of archaeological concern, and no further archaeological assessment is required. MTC accepted each of these findings.		Yes	Closed (2011)	

Appendix 5 Action for comments received on the Final Cedarland Alignment Modification Report - Pertaining to the Highway 7 Corridor and Vaughan North-South Link Public Transit Improvements Environmental Assessment (March 2010)					Compliance Monitoring			Compliance Review		
Representative	Name	No.	Comment	Response	Responsible person / agency	Status and Description of how commitment has been addressed during design	Compliance Document Reference	Status	Results	Notes
						Huron-Wendat First Nation of Wendake, Quebec was notified of the Stage 2 Archaeological Assessment findings via notification dated January 28, 2011 sent in French (the preferred language of communication) Notice of the Stage 3 Archaeological Assessment findings were sent to the Huron-Wendat First Nation of Wendake, Quebec on May 30, 2011.				
		b)	<p>SWM</p> <ul style="list-style-type: none"> - Proposed discharge to the existing storm sewer on Town Centre Boulevard from Highway 7 to Cedarland Drive would not change with the Cedarland alignment modification since this segment of the transitway is the same as the original alignment. - Since the new alignment is proposed along Cedarland Drive rather than in a new transit only corridor across the Rouge River (see EA figure 9-60), the drainage will likely be into the storm sewer on Cedarland Drive. This would have to be confirmed during development of the detailed Storm Water Management Plan in conjunction with detailed design of the transitway. - In accordance with the EA (Table 11.3-1 on page 11-2), the Cedarland alignment will be included in the development of the proposed detailed Storm Water Management Plan in accordance with MOE's 	<p>b) Storm Water Management</p> <p>The preliminary engineering design work for Segment H3, including the modified Cedarland alignment has been completed, and included the drainage study titled "Final Drainage Study Revision 1 for Viva Next H3 Highway 7 (Y.R.7), June 10, 2010".</p> <p>The preliminary engineering design proposes the use of the existing stormwater sewer on South Town Centre Boulevard, which discharges to the Rouge River through the IBM property, as well as a new stormwater sewer along the east side of South Town Centre Boulevard, which connects to a new stormwater sewer running under the Viva Rapidway on the south side of Cedarland Drive and the west side of Warden Avenue, to discharge to the Rouge River at Viva stationing 540+200, near the Warden Avenue bridge. There will be no additional runoff to the existing South Town Centre Boulevard stormwater sewer. All runoff from the Viva Rapidway adjacent Cedarland Drive and Warden Avenue will be directed to the new stormwater sewer line under the Viva Rapidway.</p>	York Region	<p>b) Status –Completed</p> <p>The "Final Drainage Study Revision 1 for Viva Next H3 Highway 7 (Y.R.7), June 10, 2010" incorporates the overall storm water management plan for the area.[1] 3 Detail Design revised the proposed storm sewer design from the "Final Drainage Study" and optimized the existing storm sewer system.</p> <p>[3]The permit for Warden Bridge was approved by the TRCA on June 4, 2012. [4]The storm sewer system revision eliminated the need of a proposed new sewer for Cedarland and a TRCA permit for is no longer required.</p> <p>As per [4] above, no stormwater management facilities were required through the design_revisions. Therefore there is no monitoring or maintenance required.</p>		Yes	Closed (2015)

			guidelines. Also as stated in the EA, the Storm Water Management Plan will outline monitoring and maintenance requirements for SWM facilities constructed as part of the undertaking. The Cedarland alignment will be included in the draft Storm Water Management Plan that has been prepared during preliminary engineering and will be finalized in the detailed design phase. MOE is listed as a potentially interested agency in Table 11.3-1 of the EA and therefore will be consulted.	The "Final Drainage Study Revision 1 for Viva Next H3 Highway 7 (Y.R.7), June 10, 2010" incorporates the storm water management plan. Monitoring and maintenance requirements for storm water management facilities constructed as part of the undertaking will be outlined during the H3 detailed design phase. [i] [1-4]						
		6 cont'd	<p>c) Noise</p> <ul style="list-style-type: none"> It is noted that Mixed Use development is proposed on the north side of Cedarland Drive which potentially includes sensitive uses (residential condo's)? Noise assessment in Appendix K does not deal with new Cedarland alignment as such addendum report should note that: "Based on the noise assessment undertaken in the original EA, we can conclude that the noise threshold will not be reached for the Cedarland Drive alignment change". If this is applicable this should be included: "Depending on lower floor building uses, may require noise screening along transitway and/or noise control features in residential design". ??? or maybe you need to do a noise assessment to confirm? 	<p>c) Noise</p> <p>A baseline study was completed as part of the EA and is not required as part of the H3 Detail Design work program. However, an additional noise impact analysis for the Cedarland Alignment Modification will be undertaken and the requirement has been incorporated in the H3 Detail Design Work Plan. [1]</p>	York Region	<p>c) Status – Completed</p> <p>A Noise Study [1] was completed in February 2012. No further mitigation is required based on the 2012 Noise Study, therefore this item is complete.</p>		Yes	Closed (2013)

			as...shall include Cedarland amendment and ACR report will report on any additional commitments.	Transit Improvements EA will incorporate the Cedarland Alignment Modification as required. In particular, the following studies are included in the H3 Detailed Design Work Plan: - Tree preservation plan and edge management plan - Stage 2 Archaeological Assessment report - Air quality report, according to MOE-approved protocols - Noise report for Cedarland Alignment - Documentation of existing wells in project area - Summary of first nations consultation - Wildlife inventory report [1-8]		Detail Design Tree Preservation Report[1] ▪ Edge Management Plan[2] ▪ Stage 2 Archaeological Assessment Report[3] ▪ Air quality report according to MOE-approved protocols[4] ▪ Noise report for Cedarland Alignment[5] ▪ Documentation of existing wells[6] ▪ Summary of first nations consultation[7] ▪ Wildlife inventory report[8] All of the required studies have been completed as referenced.
