Toronto, Ontario  
M2N 6L9

**TORONTO-YORK SPADINA SUBWAY EXTENSION  
HIGHWAY 407 STATION AND ORC HYDRO CORRIDOR  
CONTRACT NO. A85-77**

Dear Mr. Bidhendi:

Golder Associates Ltd. is pleased to submit the Draft Phase I Environmental Site Assessment for the above referenced Site for your review and comments. The scope of work for this assignment was carried out under Contract No. A85-77 and the amendments as signed and submitted to the Toronto Transit Commission (TTC) on November 14, 2008 for the Toronto-York Spadina Subway Extension (TYSSE). Twenty-nine hard copies and five CDs (PDF copy) of the draft report are provided as required for your distribution.

For the purpose of this report, the project and initial design information described in this report has been based on the information contained in the base plan and alignments provided by TTC to Golder on February 12, 2009, titled TYSSE Alignment Plan and Profile, drawing No. A0328-G3200.

We look forward to continue working with your staff on this project.

Yours truly,

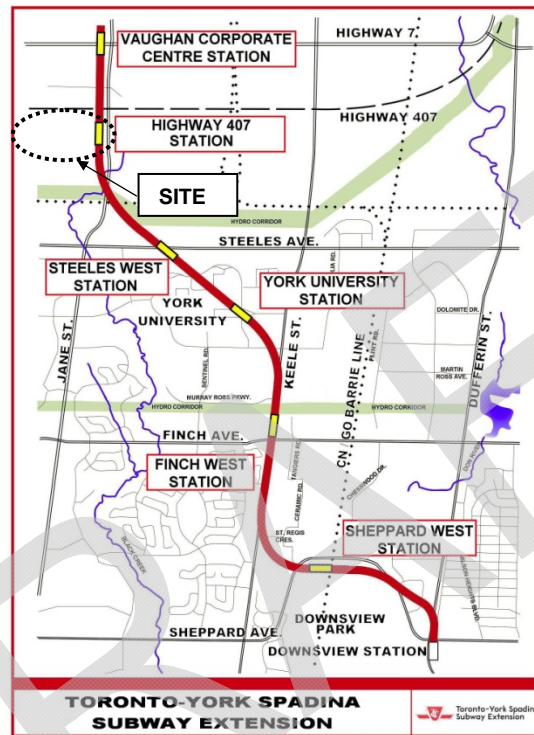

Tony Missiuna, P. Eng.  
Principal

MN/ACM/sa

## HIGHWAY 407 STATION TORONTO-YORK SPADINA SUBWAY EXTENSION

### Record of Issue

Version	Date Issued	Description	Method of Delivery
A	October 28, 2009	Draft Report	Electronic PDF
B	December 1, 2009	2 <sup>nd</sup> Draft Report	Electronic PDF

Internal File Location: TYSS PWS > 2500 ESA > 2520 Phase 1 > 252043 Highway 407 Station\_ORC

## Executive Summary

Golder Associates Ltd. ("Golder") was retained by Toronto Transit Commission ("TTC") to conduct a Phase I Environmental Site Assessment ("Phase I ESA") of the property located north of Steeles Avenue West, west of Jane Street, and south of Highway 407 in Vaughan, Ontario (the "Site"). The Site is an irregular piece of land that is occupied by various tenants. A Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west are located along the southern portion of the Site. Fifteen (15) towers are present on-Site. The Site is proposed to be developed by TTC as part of the Highway 407 Station. At the time of Golder's Site visit (October 9, 2009), the Site was owned by Ontario Realty Corporation (ORC).

The Phase I ESA was completed in accordance with the Canadian Standards Association document Z768-01 'Phase I - Environmental Site Assessments' including, but not limited to a review of available current and historical information of the Site and surrounding properties, a Site walkover, interviews with available Representatives, evaluation of readily available information, and reporting, subject to the limitations outlined in Section 7.0 of this report.

The following summarizes the findings of the Phase I ESA. The Phase I ESA findings are based on information gathered, and represent those potential environmental issues that may have a material impact on the Site. It should be noted that with respect to potential material deviations from the CSA Standard, responses to Golder's request for information from the Ontario Ministry of Environment, Region of York, and the Toronto and Region Conservation Authority could not be made without a municipal address for the Site.

- The northern portion of the Site is used for the growing of crops (i.e. tomatoes, pepper, beans, radish, rapini, etc.). Reportedly, only commercial grade fertilizers, insecticides and fungicides have been used at the Site. The on-Site historical use of pesticides and herbicides is unknown, and may represent a potential issue of environmental concern for the Site.
- A total of five (5) diesel aboveground storage tanks were observed at the Site at the time of the Site visit. Reportedly, no spills or releases have occurred at the Site. The tanks were located on the ground with no means of secondary containment. No significant ground staining was observed at the time of the Site visit. Note that the Site ground was wet due to rain fall.
- Based on information provided, a house, a swimming pool, a water well, and a water cistern were formerly located on the northeast area of the Site. No details on the decommissioning of these structures were available.
- Black Creek and a tributary of Black Creek run through the Site from north to south. Two ponds are located at the Site, on the west and east Site boundaries. There is no information regarding the water quality of the Creek and on-Site ponds and any resulting impacts on on-Site soil and groundwater. This presents a potential issue of concern for the Site.
- Miscellaneous debris and piles of materials were observed at several locations at the Site (i.e. empty drums, buckets, totes, wood, plastics, pallets, old furniture, abandoned cars, asphalt, construction debris, sand, etc.).
- Based on the EcoLog ERIS report, Dalex Co. Ltd. at 157 Adesso Dr. (inferred downgradient within 250 m) is listed as a transfer station and waste disposal site for halogenated solvents from 1989 to 1990, and from 1992 to 2006.

## PHASE I ESA HIGHWAY 407 STATION AND ORC HYDRO CORRIDOR, VAUGHAN, ON

- A CN rail line runs along the southern perimeter of the Site.

Based on the above noted issues of concern, it is recommended that a Phase II ESA be conducted at the Site to further investigate potential soil and groundwater issues.

## 1.0 INTRODUCTION

### 1.1 Background

Golder Associates Ltd. ("Golder") was retained by Toronto Transit Commission ("TTC") to conduct a Phase I Environmental Site Assessment ("Phase I ESA") of the property located north of Steeles Avenue West, west of Jane Street, and south of Highway 407 in Vaughan, Ontario (the "Site"). The Site is an irregular piece of land that is occupied by different tenants. A Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west are located along the southern portion of the Site. Fifteen (15) towers are present on-Site. The Site is proposed to be developed by TTC as part of the Highway 407 Station. At the time of Golder's Site visit (October 9, 2009), the Site was owned by Ontario Realty Corporation (ORC). The hydro corridor is administered by Hydro One Networks.

A Phase I ESA is a preliminary qualitative assessment of the environmental condition of a property, based on a review of current activities and historical information for the subject property and also a review of available environmental related information for the surrounding properties. The objective of the Phase I ESA is to identify and report on evidence of actual and/or potential contamination on a property from current activities at the property or from adjacent properties. The Phase I ESA is also used to identify environmental concerns from historical activities at the property. The Phase I ESA is designed to identify and report on evidence of actual or potential environmental impact at the Site.

The Site location and Site and Surrounding Land Use including any on-Site identified areas of potential environmental concern are shown on **Figure 1** and **Figure 2**.

### 1.2 Scope of Work

Golder's assignment was completed in accordance with the terms and conditions outlined in the Golder's memorandum to Mr. Hossein Bidhendi of TTC, dated March 25, 2009. Authorization to proceed was provided to Golder by Ms. Sabrina Hamidullah, on behalf of TTC, on March 31 2009.

The Phase I ESA was completed in accordance with the Canadian Standards Association document Z768-01 '*Phase I - Environmental Site Assessments*' including, but not limited to a review of available current and historical information of the Site and surrounding properties, a Site walkover, interviews with available Representatives, evaluation of readily available information, and reporting, subject to the limitations outlined in Section 7.0 of this report.

Golder interviewed Mr. Carmen Farrace from Rosa & Maria Farms tenant occupying the northern portion of the Site, Mr. Joe Basta from Rocco Farms tenant occupying the central and southwest corner of the Site, and Mr. Nino from Nino's Landscaping occupying the southeast corner of the Site. Mr. Farrace and Mr. Basta both used the Site as farming land and as a sale point for vegetables, and Mr. Nino occupies the Site for the storage of tools and equipment related to his landscaping company.

The Site visit included a walk-through of accessible areas of the Site, as well as observations from the Site of adjoining properties and publicly accessible locations.

## 2.0 SITE DESCRIPTION

### 2.1 Topographic, Geologic and Hydrogeologic Conditions

Topic	Conditions	Comment / Source
<b>Subsurface Soils</b>	<p>Based on boreholes drilled in the vicinity of the proposed Highway 407 Station, the Site is generally underlain by four major soil deposits: an Upper Till Deposit, and Upper Sand/Silt Deposit, a Lower Till Deposit, and a Lower Sand/Silt Deposit.</p> <p>In addition, heterogeneous fill materials containing varying amounts of organic matter including topsoil and rootlets were encountered.</p>	Based on results of the “ <i>Initial Geo-Engineering Design Draft Report Highway 407 Station</i> ” by Golder Associates Ltd., September 2009.
<b>Type of Bedrock</b>	Georgian Bay Formation consisting of shale, limestone, dolostone and siltstone.	Ontario Ministry of Northern Development and Mines, Map No. 2544, “ <i>Bedrock Geology of Ontario, Southern Sheet</i> ”, 1991.
<b>Depth to Bedrock</b>	Inferred to be greater than 55 metres below ground surface (m bgs).	Based on results of the “ <i>Initial Geo-Engineering Design Draft Report Highway 407 Station</i> ” by Golder Associates Ltd., September 2009.
<b>Depth to Groundwater</b>	<p>Shallow groundwater varies from approximately 0.5 to 5 m bgs in the Upper Sand/Silt deposits.</p> <p>Groundwater in the Lower Sand/Silt is significantly lower at approximately 15 m bgs.</p>	Based on results of the “ <i>Initial Geo-Engineering Design Draft Report Highway 407 Station</i> ” by Golder Associates Ltd., September 2009.
<b>Nearest Open Water Body</b>	Black Creek and what appears to be a tributary of Black Creek run through the Site from north to south.	Energy, Mines and Resources Canada Topographic Map No. 30 M/13 - “Bolton”, Edition 7.
<b>Slope of Site Ground Surface</b>	The area of the Site generally slopes downward from north to south.	Based on visual observations.
<b>Inferred Near Surface Groundwater Flow</b>	Near surface groundwater is inferred to follow the topography of the area, flowing towards Black Creek.	Visual observations. Energy, Mines and Resources Canada Topographic Map No. 30 M/13 - “Bolton”, Edition 7.
<b>Topography of Site and Surrounding Area</b>	The Site is generally uneven. A ditch is located along the south	Visual observations. Energy, Mines and Resources

**PHASE I ESA HIGHWAY 407 STATION AND ORC HYDRO CORRIDOR,  
VAUGHAN, ON**

Topic	Conditions	Comment / Source
	<p>Site boundary, adjacent to the rail line. A pond is located on the west portion of the Site. Other areas with ponded water were observed throughout the Site as a result of rain fall during the Site visit.</p> <p>The general area surrounding the Site slopes slightly towards the west to southwest.</p>	<p>Canada Topographic Map No. 30 M/13 - "Bolton", Edition 7; and visual observations.</p>
<p><b>Site Grade Relative to the Adjoining Properties</b></p>	<p>Highway 400 and Highway 407 located west and north of the Site, respectively appeared to be at a higher elevation than the Site.</p> <p>Jane Street located east of the Site appears to be at grade with the Site.</p> <p>The area south of the Site appears to be at a lower elevation than the Site.</p>	<p>Based on visual observations.</p>
<p><b>Water Wells on Site (Depth, Drilling Date, Use)</b></p>	<p>Mr. Farrace from Rosa &amp; Maria Farms understands that a water well was located on the northeast portion of the Site; however no details were provided.</p> <p>A number of monitoring wells were observed throughout the Site during the Site visit. See Section 4.4.</p>	<p>Based on information provided by the Site Representatives and visual observations.</p>
<p><b>Water Wells on the Neighbouring Properties</b></p>	<p>None observed or reported. See Section 4.4.</p>	<p>Based on visual observations.</p>
<p><b>Presence of Fill Material on-Site</b></p>	<p>The Site Representatives were unaware if fill material has been brought to the Site.</p> <p>Piles of materials (i.e. asphalt, construction debris, sand, etc.) were observed at several locations on-Site.</p>	<p>Based on visual observations.</p>
<p><b>Prominent Physical Features on-Site or Surrounding Area</b></p>	<p>The northern portion of the Site is used for the growing of a variety of vegetables by two different tenants. The southwest portion of the Site is heavily vegetated land.</p> <p>A Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running</p>	<p>Based on visual observations.</p>

Topic	Conditions	Comment / Source
	<p>east-west is located along the southern portion of the Site. Fifteen (15) towers are present on-Site.</p> <p>An underground natural gas pipeline runs east-west at the Site.</p> <p>A CN rail line is located along the southern Site boundary.</p> <p>The Site is bordered to the north and west by Highway 407 and Highway 400, respectively.</p> <p>Black Creek and what appears to be a tributary of Black Creek cross the Site north to south.</p>	

## 2.2 Site Physical Description

Topic	Observations	Comment / Source
<b>Site Area</b>	<p>The Site an irregular parcel of land.</p> <p>The approximate area of the Site is 534,784 sq. m.</p>	Google Map Image, 2005.
<b>Number of Buildings on the Site</b>	<p>Several wooden and metal sheds were observed on the portions of the Site occupied by tenants, including two structures that were referred as greenhouses.</p> <p>The sheds observed did not have bare ground or wooden flooring, with the exception of two sheds that have concrete floor.</p> <p>Two abandoned sheds were also observed on the west and southeast areas of the Site.</p>	Based on visual observations.
<b>Approximate Floor Space of Buildings</b>	Information not available.	-
<b>Approximate Percentage of Site Covered by Site Building(s)</b>	Less than 5%	Based on visual observations.
<b>Approximate Percentage of Site Consisting of Landscaped/ Grassed/Bare Ground Areas</b>	<p>More than 95%.</p> <p>The northern half of the Site is used for the growing of vegetables.</p>	Based on visual observations.

<b>Topic</b>	<b>Observations</b>	<b>Comment / Source</b>
<b>Approximate Percentage of Site Consisting of Paved or Other Sealed Surface Materials</b>	0%	Based on visual observations.
<b>Number of Floors (include all levels, whether above or below ground)</b>	The sheds observed at the Site were one level.	Based on visual observations.
<b>Number of Levels Below Ground Level</b>	None.	Based on visual observations.

## 2.3 Site Operations

The Site is an irregular piece of land that is occupied by various tenants. A Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west are located along the southern portion of the Site. Fifteen (15) towers are present on-Site. The hydro corridor is administered by Hydro One Networks. An Enbridge natural gas underground line runs east-west on the southern portion of the Site.

At the time of the Site visit, the northern portion of the Site was occupied by Rosa & Maria Farms; that portion of the Site is primarily used as farm. A sales area for farm produce is located on the eastern part of this property. Several sheds, and other miscellaneous materials (i.e. empty drums, buckets, totes, wood, plastics, pallets, old furniture, and abandoned car, etc.), and tractors were observed in this area. Reportedly, before being occupied by the farm, the area was formerly occupied by a large house with swimming pool and other structures (i.e. small sheds), and a water cistern. Mr. Farrace of Rosa & Maria Farms indicated that the former house and the structures were decommissioned before the construction of Highway 407. What appeared to be the foundation of the house was observed adjacent to the one of the sheds occupied by Mr. Farrace.

Rocco Farms occupies the central and southwest corner of the Site. At the time of the Site visit, the central portion of the Site was used as farm land, whereas the southwest portion was vacant and covered with overgrown vegetation. Similar to Rosa & Maria Farms, several tractors and miscellaneous materials were observed. Rocco Farms also has a sales area for farm produce on the eastern part of this property. At the Rocco Farms, Mr. Basta (the tenant) indicated that water for irrigation purposes is taken from Black Creek using portable pumps.

Several sheds (at least 20 years old) were observed within the two farms, however they are not serviced with electricity, sanitary sewer or potable water. Washrooms at the Site are pit toilets. No heating or cooling is provided to the sheds, with the exception of one wood-fired furnace in one of the sheds in Rocco Farms. Mr. Farrace and Mr. Basta indicated that they have small generators in case electricity (for illumination) is needed, but that the generators are rarely used.

Nino's Landscaping occupies the southeast corner of the Site for the storage of landscape tools, equipment, and miscellaneous products. Mr. Nino indicated that they have occupied that portion of the Site for 15 years. Three office trailers, and piles of miscellaneous debris were observed within this area. Mr. Nino indicated that chemicals or fertilizers are not stored in the area. One shed and two structures referred to as greenhouses were observed in this portion of the Site. The greenhouses were used for the storage of trees, tools, and equipment. The shed and the greenhouses do not have concrete flooring. Some portions of the ground are gravel-covered.

During the Site visit, several burned areas were observed within the farmed portion of the Site.

Black Creek and a tributary of Black Creek run through the Site from north to south. Two ponds are located at the Site, on the west and east Site boundaries. There is no information regarding the water quality of the Creek

and on-Site ponds and any resulting impacts on on-Site soil and groundwater. This presents a potential issue of concern for the Site.

Another structure was observed along the east Site boundary. The structure appeared to be a house with a small area for growing crops. Based on information provided, the house is occupied by one person. This area of the Site was not accessed.

### 3.0 HISTORICAL RECORDS REVIEW

#### 3.1 Site Interviews and Documents

Golder interviewed Mr. Carmen Farrace (of Rosa & Maria Farms), who is the tenant located on the northern portion of the Site. Mr. Farrace indicated that they have leased their portion of the Site from ORC for growing vegetables (i.e. tomatoes, pepper, beans, radish, rapini, etc.). Mr. Farrace indicated that they have occupied the Site for approximately 35 to 40 years, and that the former occupant of that portion of the Site had a large house with a swimming pool and other structures (i.e. small sheds) in the northeast corner of the Site. Reportedly, a water cistern and a water well were also located in this area. No details regarding the demolition of the house or swimming pool were provided. Mr. Farrace indicated that commercial grade fertilizers (containing sulphides and copper) are used at the Site, and that no bulk storage of fertilizers is conducted at the Site.

Mr. Joe Basta from Rocco Farms was also interviewed by Golder. Mr. Basta indicated that they have been a tenant on the Site for approximately 14 years (since the construction of Highway 407). Mr. Basta indicated that they occupied the central and southwest portions of the Site; however vegetables are grown only on the central portion. Water for irrigation purposes (approximately 5,000 to 6,000 gallons a year) is taken from what appears to be a tributary of Black Creek crossing the Site using portable water pumps. Mr. Basta indicated that commercial grade fertilizers are used at the Site, and that there are no fertilizers stored on Site.

Nino's Landscaping is the tenant occupying the southeast corner of the Site. Mr. Nino indicated that they have occupied their portion of the Site for 15 years and used it for the storage of miscellaneous materials including tools, equipment, trees, etc. related to his landscaping company.

No previous environmental reports relating to the Site were provided to Golder for review.

#### 3.2 Aerial Photographs

Golder reviewed aerial photographs dated 1950, 1960, 1974, and 1988, obtained from the National Air Photo Library, to help understand the history of the development of the Site and surrounding properties (within 200 m). Information obtained from the review of the aerial photographs is summarized in the table below. Copies of all the aerial photographs are presented in **Appendix A**.

Date	Site	Surrounding Properties
1950	Agricultural land with Black Creek running across the central and eastern portion of the Site.	<b>North:</b> Agricultural land extending for more than 250 m. <b>East:</b> Jane Street followed by agricultural land. <b>South:</b> A dirt road followed by agricultural land. Black Creek continues south; Steeles Avenue is visible further south. <b>West:</b> Agricultural land followed by Highway 400. Area further west is not visible on the photograph.

Date	Site	Surrounding Properties
1960	Similar to the 1950 aerial photograph.	<p><b>North:</b> Similar to 1950 aerial photograph.</p> <p><b>East:</b> Jane Street followed by vegetated land then agricultural land.</p> <p><b>South:</b> Similar to 1950 aerial photograph.</p> <p><b>West:</b> Agricultural land followed by Highway 400. Agricultural land is further west with vegetated land northwest of the Site.</p>
1974	Similar to the 1960 aerial photograph with the exception that a cleared area is observed on the central portion of the Site.	<p><b>North:</b> Agricultural or vacant land is visible north of the Site. Vacant land and several buildings are visible northeast of the Site.</p> <p><b>East:</b> Jane Street followed by what appears to be evidence of the cemetery. Vacant or agricultural land is visible further east followed by CN Railway lines.</p> <p><b>South:</b> CN Railway lines run parallel to the Site with Black Creek continuing south. Agricultural or vacant land is beyond the railway line; Steeles Avenue is visible further south. A structure that appears to be a building is observed southwest.</p> <p><b>West:</b> Similar to 1960 aerial photograph.</p>
1988	Similar to the 1974 aerial photograph with the addition of dirt roads and a structure that appears to be a small building.	<p><b>North:</b> Agricultural or vacant land north of the Site with vegetated land further north. What appears to be an industrial development is observed northeast of the Site.</p> <p><b>East:</b> Similar to 1974 aerial photograph with the addition of what appears to be cleared land southeast of the Site.</p> <p><b>South:</b> Similar to 1974 aerial photograph with the addition of several buildings southwest.</p> <p><b>West:</b> Similar to 1974 aerial photograph.</p>

Based on the aerial photograph review, the Site was mainly used for agricultural purposes and vegetated land. Development of the areas surrounding the Site appears to have begun between 1960 and 1974, including the construction of rail lines, industrial developments and a cemetery to the east of the Site; and industrial and commercial developments to the south and northeast of the Site.

### 3.3 Review of Street Directories

City street directories were reviewed to develop an occupancy history for the Site and surrounding properties. Street directories were reviewed for years 1960, 1970/71, 1981/1982, 1991, and 2000/2001. The following summarizes the noteworthy findings of the street directory searches.

#### SITE

- 7230 Jane St. is listed in the 2000/2001 directory as Rocco Farms.

## SURROUNDINGS

- Jane Street is listed as early as 1970. 7171 Jane St. is listed in the 1991 and 2000/2001 directories under Davis Distributing Limited, and Premdor Century, Inc., UAP Auto Parts, respectively. 7241 and 7243 Jane St. were listed for Truman WD and Beechwood Cemetery Downs as early as 1970/1971. Black Creek Pumping Station is listed the 1991 and 2000/2001 directories.
- Steeles Avenue West is listed as early as 1991. 2700 Steeles Avenue West was listed under Graphstar Communications Inc. in the 1991 directory, and under Aercol Airguard Industries a Division of Delcan Filtration Inc., Aventech Research Inc., Delcon Filtration Inc., and Roadhawk Express in the 2000/2001 directory. 2720 Steeles Avenue West was listed in the 1991 directory under Dynesco Inc., and Jasper Construction Inc.; and as Captus Press Inc., and Quebecor Printpak in the 2000/2001 directory.

Based on the inferred down-gradient location of these properties located on Steeles Avenue West and Jane Street, they are not expected to present a potential issue of environmental concern for the Site at this time.

### 3.4 Land Title Information

No records of Land Title information were provided to Golder by TTC in relation to the Site.

### 3.5 Review of Insurance Maps and Reports

Golder conducted a search of Fire Insurance Plans ("FIPs"), Property Underwriters' Reports ("PURs") and Property Underwriters' Plans ("PUPs") related to the Site and surrounding areas. However, no records were found for the area where the Site is located.

### 3.6 Previous Investigations

Golder was not provided with previous investigations in relation to the Site.

## 4.0 REGULATORY INFORMATION

Requests were made to regulatory agencies in order to establish if there is information on file pertaining to the environmental status of the Site. It should be noted that several of the requests listed below were not completed as these require a municipal address for the Site to be provided. The available results of these requests are described below.

### 4.1 Ontario Ministry of Environment

A formal request to the Freedom of Information office of the Ministry of Environment to determine if they have a file with respect to the Site could not be made without a municipal address for the Site.

## 4.2 Region of York

A request for information to the Region of York for records and information relating to any environmental concerns, including spills and complaints could not be made without a municipal address for the Site.

## 4.3 Toronto and Region Conservation Authority

A request to the Toronto and Region Conservation Authority for records and information relating to any regulations, permits and areas affected, assessments, fill areas, violations regarding the Site could not be made without a municipal address for the Site.

## 4.4 Regulatory Databases

Golder contracted the services of EcoLog Environmental Risk Information Services Ltd. (“EcoLog ERIS”) to conduct a search of their federal, provincial and private sector databases for information on the Site and surrounding area (i.e. 250 m around the Site). The complete EcoLog ERIS report, including a brief description of each of the databases searched for this Phase I ESA, is included in **Appendix C**. The following is a summary of the noteworthy findings as identified within the EcoLog ERIS report:

### SITE

No listings are provided for the Site in the EcoLog ERIS report.

### SURROUNDING PROPERTIES WITHIN 250 m FROM THE SITE

#### *Certificates of Approval*

The EcoLog ERIS report listed four locations within a 250 m radius of the Site as having Certificates of Approval (C of As) for municipal sewage, and industrial air. Three C of As are listed as approved, and one C of A for the installation of four paint spray booths is listed as in progress.

#### *Environmental Registry*

Ascent Power Technology Inc., Trowers Fine Furniture, and ITW Canada Management located south of the Site, are listed as approved for the discharge into natural environmental other than water (i.e. air), in 1998 and 2005.

#### *ERIS Historical Searches*

Five locations within 250 m from the Site have been searched from 2003 to 2009.

#### *Fuel Storage Tanks*

Gottardo Contracting Inc., at 185 Adesso Dr. (inferred downgradient) (listed as a gasoline station) located adjacent to the south of the Site, is listed twice under the Fuel Storage Tank database for two underground storage tanks (“USTs”). The fuel tanks were described as single walled with a capacity of 4,500 L and 10,000 L; the tanks appeared as active, installed in 1984, and licensed in August 2007 and December 2008. One tank is used for gasoline storage and the other for diesel storage.

#### *Ontario Regulation 347 Waste Generators Summary*

The EcoLog ERIS report listed approximately eighteen properties located within a 250 m radius of the Site as generators of a range of hazardous wastes from 1986 to 2009, including but not limited to halogenated solvents, waste oils and lubricants, acid waste-heavy metals, aromatic and aliphatic solvents, petroleum distillates, polymeric resins, oil skimmings & sludges, waste compressed gases, wastes from the use of pigments, coatings and paints, pharmaceuticals, pathological wastes, inorganic and organic laboratory chemicals, alkaline wastes-

heavy metals, neutralized wastes-heavy metals, and other specified inorganics. The companies listed included the following (inferred downgradient or transgradient): Mount Pleasant Group of Cemeteries, Davis Distributing Ltd., Ministry of Health, Eureka Coach Company, Jemco Industries Ltd., Adriatic Glass & Mirrors Ltd., Dalex Canada Inc., Murata, Celestica International Inc., Ascent Power Technology Inc., Gottardo Contracting Inc., J. W. Expertise Inc., Daco Manufacturing Ltd., ITW Plastiglide Ltd., ITW Deltar Canada, ITW Canada Management Company, and ITW PMC.

Inferred upgradient properties (northeast from the Site beyond Highway 407) included Select Flooring & Wood Products at 126 Peelar Road, Unit 1 for paint/pigment/coating residues in 2000 and 2001; and Truetech Medical of North America Inc. for oil skimmings & sludges and waste oils & lubricants from 1986 to 1990, and from 1992 to 1998. In addition, Black Creek Sewage Pumping located adjacent to the southeast corner of the Site is listed from 1999 to 2006 and as of June 2009 for waste storage including pigments, coatings and paints, aliphatic solvents and residues, waste oils/sludges (petroleum based), and waste crankcase oils and lubricants.

### ***Pesticide Register***

Vinyl Excavating & Landscaping Ltd. at 5-110 Adesso Dr. (inferred downgradient) is listed as an operator. No more details were provided.

### ***Private and Retail Fuel Storage Tanks***

Gottardo Contracting at 185 Adesso Dr. (inferred downgradient) is listed for private fuel outlet. No more details were provided.

### ***Ontario Regulation 347 Waste Receivers Summary***

Dalex Co. Ltd. at 157 Adesso Dr. (inferred downgradient within 250 m) is listed as a transfer station for halogenated solvents from 1989 to 1990, and from 1992 to 2006.

### ***Scott's Manufacturing Directory***

Twenty four companies were listed in the EcoLog ERIS report located in proximity to the Site. The following companies are listed at an inferred upgradient location from the Site (between 250 and 500 m north and northeast from the Site): Mircom Technologies Ltd. at 25 Interchange Way for telephone apparatus and other communications equipment manufacturing established in 1991; Altwood Garage Doors Ltd. at 126 Peelar Rd., established in 1983 for millwork; Amco Precision Inc. and Rapid Pallet Limited at 146 Peelar Rd. for machine shops and wood container and pallet manufacturing, and Optech Inc. at 300 Interchange Way for machinery, controlling devices and instruments manufacturing, and software publishers.

The other companies listed are located at inferred trans to downgradient locations (east and south) from the Site and include the following operations: tobacco and tobacco products, wholesale distributors, office and store fixtures, steel wire drawing, stamping, metal product manufacturing, lighting fixture manufacturing, wood kitchen cabinets, glass product manufacturing, shelving/locker manufacturing, electronic components, jewellery manufacturing, carpentry contractors, vehicle parts manufacturing, and plastic products.

### ***Ontario Spills***

Nine spills were listed within a 250 m radius of the Site. The following five spills were listed at an inferred upgradient location from the Site: a dark purple liquid was noted twice in 1999 in storm outfall to Black Creek, 25 L of cutting oil dumped in creek in 1990 (reported as vandalism), 10 L of diesel to ground in 2000, and an unknown quantity of diesel to road in 2004.

The other releases listed are located at inferred trans to downgradient locations from the Site and included the following materials: 90 L of diesel onto ground and ditch in 1999, unknown amount of diesel fuel to road and catchbasin in 2007, 5 L of diesel fuel to stormwater in 1991, and an unknown amount of diesel fuel to land and water in 2001.

### **Waste Disposal Site – MOE CA Inventory**

Dalex Co. Limited at 157 Adesso Dr. (inferred downgradient, approximately 40 m from the Site) with an area of 0.45 has been listed as an approved facility for hazardous wastes. It operated under a license issue in 1986 for 136 L per day of hazardous wastes.

### **Water Well Information System**

Nine (9) listings are provided for wells within 250 metres from the Site, the majority of the wells are for water supply, dewatering, and observation purposes. Two wells are listed to the north of the Site (inferred upgradient); one of the wells is listed as a test hole and was drilled to 15 m (49 ft.) below ground surface; no details were provided for the second well. The remaining seven (7) wells located at an inferred trans to downgradient location from the Site were listed for dewatering, water supply and observation purposes; one of the wells is listed as abandoned. These wells were drilled up to 15.5 m (51 ft.) below ground surface.

## **5.0 SITE VISIT FINDINGS**

Ms. Victoria Atencio and Ms. Laura Fuentes de Maria of Golder's Environmental Management Division conducted a Site visit on October 9, 2009. The Site visit was documented with photographs and additional notes. References are made to Site conditions as observed at the time of the Site visit. At the time of the Site visit on October 9, 2009, the weather conditions were rainy and windy, and the temperature was approximately 8°C. The Site visit included a walk-around the Site. Note that the Site ground was wet due to rain fall. Photographs of some of the features noted during the Site visit are attached in **Appendix D**.

The Site reconnaissance also included a cursory inspection of neighbouring properties from the Site and publicly accessible areas.

The results of the Site visit are presented below.

### **5.1 Air Emissions**

<b>Topic</b>	<b>Observations/Findings</b>
<b>Process Exhausts</b>	Not applicable. No buildings present on-Site.
<b>Heating and Cooling System(s)</b>	The Site Representatives indicated that heating and cooling is not provided to the sheds at the Site. One wood-fired furnace was observed in the one of the sheds.
<b>Other Exhausts</b>	Other exhaust may relate to the tractors observed at the Site used during farming activities on the northern portion of the Site.
<b>Odours</b>	No strong, pungent or noxious odours were noted during the Site visit. Mr. Basta indicated that a paint/solvent-like odour is sometimes noted in the area. Wastewater-like odours were noticed next to what appeared to be a sanitary wastewater connection on the southeast area of the Site.
<b>Visible Emissions</b>	Only emissions observed related to the wood-fire furnace for comfort heating observed in one of the sheds.

## 5.2 Water and Wastewater Discharges

Topic	Observations/Findings
<b>Water Supply Source</b>	The Site Representatives indicated that water is not supplied to the Site.
<b>Water Use</b>	Water for irrigation purposes is taken from Black Creek using portable water pumps.
<b>Wastewater Treatment</b>	Not applicable. No wastewater is generated at the Site.
<b>Sanitary/Process Wastewater Receptor</b>	Not applicable. According to the Site Representatives, the Site is not connected to the sanitary sewer. Pit toilets are used at the Site. The pit toilets use a hole in the ground; once that location is not longer suitable for use, the pit toilet is moved to a different location.
<b>Sanitary Sewer Connection</b>	Not applicable. The Site is not connected to the sanitary sewer. What appeared to be a sanitary water connection and a vent pipe were observed on the southeast area of the Site; a second connection was also observed on the southeast portion of the Site.
<b>Septic Systems</b>	The Site Representatives indicated that the pit toilets are not equipped with a lined septic tank.
<b>Storm Water Flow</b>	Stormwater sheet flows in a southerly direction towards Black Creek running through the Site. Culverts were observed on the east and north Site boundaries. What appears to be a tributary of Black Creek is located in the central portion of the Site. The tributary runs from north to south through the Site.
<b>Storm Sewer Connection</b>	Not applicable. The Site is not connected to the stormwater sewer.
<b>Storm Water Infiltration</b>	Storm water infiltrates into the subsurface, evaporates and/or sheet flows towards Black Creek running through the Site. Culverts were observed near the north, south, and east Site boundaries.
<b>Watercourses, Ditches or Ponded Water</b>	A pond was observed in the west portion of the Site. Black Creek runs through the Site from north to south, and what appears to be a tributary of Black Creek runs through the agricultural land in the central portion of the Site. Due to the rain during the Site visit, small areas of ponded water were observed throughout the Site.

## 5.3 Hazardous and Non-hazardous Waste

Topic	Observations/Findings
<b>Hazardous Wastes Produced and Originating Processes</b>	The Site Representatives indicated that no hazardous wastes are generated at the Site. Reportedly, no significant maintenance or servicing is conducted on the trucks or tractors on Site.
<b>Storage of Hazardous Wastes</b>	Hazardous wastes were not observed to be stored on-Site.
<b>Staining or Evidence of Upset in Hazardous Waste Storage Areas</b>	None observed or reported.

<b>Topic</b>	<b>Observations/Findings</b>
<b>Removal of Hazardous Waste</b>	Mr. Basta from Rocco Farms indicated that empty fertilizer containers are disposed of off-Site.
<b>Non-hazardous Wastes</b>	Household-related refuse is generated at the Site. Miscellaneous debris was observed at several locations in the areas occupied by the tenants. The debris included empty drums, totes, buckets, wooden pallets, old furniture, wood logs, etc. Piles of other materials (i.e. asphalt, construction debris, sand, etc.) were observed at several locations on-Site. The Site Representatives indicated that illegal dumping of garbage is reportedly done at some locations of the Site.
<b>Recyclables</b>	None observed or reported.

## 5.4 Materials and Chemicals

<b>Topic</b>	<b>Observations/Findings</b>
<b>Material Use and Storage</b>	Mr. Farrace and Mr. Basta indicated that no chemicals or materials are stored on-Site with the exception of commercial grade fertilizers, insecticides and fungicides. These materials are stored for a short period of time on-Site before use. The storage of these substances was not observed at the Site at the time of the Site visit. No other substances or chemicals were observed on-Site.
<b>In-floor or In-ground Sumps, Trenches or Pits</b>	None observed or reported. Mr. Farrace from Rosa & Maria Farms indicated that the previous tenants had a water cistern formerly located on the northeast corner of the Site. No more details were provided.
<b>Grease Traps Present</b>	None observed or reported.
<b>Oil / water Separators Present</b>	None observed or reported.
<b>Hydraulic Hoists Present</b>	None observed or reported.
<b>Staining or Evidence of Upset</b>	None observed. Note that the Site ground was wet due to rain fall limiting visual inspection.

## 5.5 Asbestos-Containing Materials (“ACMs”)

<b>Topic</b>	<b>Observations/Findings</b>
<b>Potential Friable ACMs and Potential Non-Friable ACMs</b>	None observed or reported.

## 5.6 Polychlorinated Biphenyls (“PCB”) Containing Materials and Equipment

Topic	Observations/Findings
Electricity Source	No electricity is supplied to the Site. Mr. Farrace and Mr. Basta indicated that they have small generators in case electricity (for illumination) is needed, but that the generators are rarely used.
Transformer(s)	None observed or reported.
Capacitors	None observed or reported.
Light Ballasts	None observed or reported.
Elevators on-Site (Use and Type)	None observed or reported.

## 5.7 Special Attention Items

Topic	Observations/Findings
Lead-Based Paints (“LBPs”)	Painted surfaces at the Site, (walls of the wooden and metal sheds) were observed to be in reasonable condition.
Ozone-Depleting Substances (“ODSs”)	None observed or reported.
Radon Gas	Not applicable. There are no underground levels at the Site. Considering that soils in this part of Ontario have a low radon gas generating potential, radon is not considered to be an issue of environmental concern at the Site.
Urea Formaldehyde Foam Insulation (“UFFI”)	None observed or reported.
Mould	None observed or reported.
Pesticides and Herbicides	Mr. Farrace from Rosa & Maria Farms indicated that commercial grade fertilizers (containing sulphides and copper) are used at the Site, and that no bulk storage of fertilizers is conducted at the Site. Mr. Basta from Rocco Farms indicated that commercial grade fertilizers, insecticides and fungicides are used at the Site. No bulk storage of these materials are conducted on-Site. Reportedly, Mr. Basta was issued a license from the Ministry of Agriculture, Food and Rural Affairs for the use of fertilizers. Golder did not review the license for the use of fertilizers at the time of the Site visit. Mr. Nino from Nino’s Landscaping indicated that no fertilizers, pesticides or herbicides are stored on-Site.

Topic	Observations/Findings
Mercury Containing Equipment	None observed or reported.
Radioactive materials	None observed or reported.

## 5.8 Storage Tanks

### 5.8.1 Aboveground Storage Tanks (“ASTs”)

A number of aboveground storage tanks were observed at the Site.

- One (1) diesel AST was observed in the Rosa & Maria Farms. The tank was located resting on the ground next to other miscellaneous materials. The diesel is used for the tractors at the Site. No evidence of spills was observed on the ground near the tank. Mr. Farrace indicated that no spills or releases have occurred at the Site. No information of the tanks was provided.
- Mr. Basta from Rocco Farms indicated that there are two (2) diesel ASTs at the Site (metal, 1,200 and 2,200 L). The diesel is used for the tractors at the Site. One of the ASTs was located in a vegetated area next to a parked truck, and the other diesel AST was observed next to a tree among other empty ASTs. No evidence of spills was observed on the ground near the tanks. Reportedly, no spills or releases have occurred at the Site.
- Two (2) portable diesel ASTs were observed in the portion of the Site occupied by Nino’s Landscaping. Reportedly, the portable ASTs (less than 200 L each) are only stored at the Site, and are only used off-Site at their work sites for fuelling landscape equipment. No fuelling activities are conducted on-Site. Reportedly, no spills or releases have occurred at the Site. No evidence of past spills was observed on the ground near the tanks.

### 5.8.2 Underground Storage Tanks (“USTs”)

No evidence of underground storage tanks (“USTs”), such as fill pipes and vent pipes, was observed on-Site during the Site visit.

Other underground structures observed at the Site included an Enbridge natural gas pipeline running east-west on the southern portion of the Site.

## 5.9 Spills

A spill is broadly termed an event or release that may cause, or is likely to cause, adverse effects on human health or the natural environment. Spills may occur during the use, storage and/or transfer of such materials located on-Site, and may result in significant environmental impact if not managed appropriately.

No significant ground staining was observed at the time of the Site visit. No evidence of discharges or upsets of chemicals were observed on-Site.

The Site Representatives indicated that no spills have occurred at the Site. Note that the Site ground was wet due to rain fall limiting visual inspection.

## 5.10 Surrounding Land Use

During the Site visit, a visual reconnaissance of the outdoor operations of the adjacent properties that may potentially impact the Site was carried out from the subject Site and publicly accessible areas.

The surrounding properties include industrial and commercial occupancies, as detailed on **Figure 1**.

### *North (Inferred Upgradient)*

Highway 407 is located immediately adjacent to the north of the Site extending for more than 250 m north of the Site. Several industrial and commercial developments are located north of Highway 407. The area to the northeast of the Site (more than 500 m from the Site) appears to be an industrial development with several multi-tenant buildings.

### *East (Inferred Up to Trans-gradient)*

Jane Street borders the Site to the east, followed by the Beechwood Cemetery, and a multi-tenant industrial building extending for more than 250 m from the Site.

### *South (Inferred Downgradient)*

The Black Creek Sewage Pumping facility is located immediately adjacent to the southeast of the Site. A CN rail line runs along the south Site boundary, followed by a commercial and industrial development extending for more than 250 m to Steeles Avenue West.

The UPS building with associated parking lots is located approximately 180 m southeast from the Site.

### *West (Inferred Down to Trans-gradient)*

Highway 400 borders the Site to the west, followed by a large building occupied by the Toronto Star. The intersection of Highway 400 and Highway 407 is located immediately adjacent to the northwest corner of the Site.

## 6.0 FINDINGS AND CONCLUSIONS

The following summarizes the findings of the Phase I ESA. The Phase I ESA findings are based on information gathered, and represents those potential environmental issues that may have a material impact on the Site. It should be noted that with respect to potential material deviations from the CSA Standard, responses to Golder's request for information from the Ontario Ministry of Environment, Region of York, and the Toronto and Region Conservation Authority could not be made without a municipal address for the Site.

- The northern portion of the Site is used for the growing of crops (i.e. tomatoes, pepper, beans, radish, rapini, etc.). Reportedly, only commercial grade fertilizers, insecticides and fungicides have been used at the Site. The on-Site historical use of pesticides and herbicides is unknown, and may represent a potential issue of environmental concern for the Site.
- A total of five (5) diesel aboveground storage tanks were observed at the Site at the time of the Site visit. Reportedly, no spills or releases have occurred at the Site. The tanks were located on the ground with no means of secondary containment. No significant ground staining was observed at the time of the Site visit. Note that the Site ground was wet due to rain fall.
- Based on information provided, a house, a swimming pool, a water well, and a water cistern were formerly located on the northeast area of the Site. No details on the decommissioning of these structures were available.

- Black Creek and a tributary of Black Creek run through the Site from north to south. Two ponds are located at the Site, on the west and east Site boundaries. There is no information regarding the water quality of the Creek and on-Site ponds and any resulting impacts on on-Site soil and groundwater. This presents a potential issue of concern for the Site.
- Miscellaneous debris and piles of materials were observed at several locations at the Site (i.e. empty drums, buckets, totes, wood, plastics, pallets, old furniture, abandoned cars, asphalt, construction debris, sand, etc.).
- Based on the EcoLog ERIS report, Dalex Co. Ltd. at 157 Adesso Dr. (inferred downgradient within 250 m) is listed as a transfer station and waste disposal site for halogenated solvents from 1989 to 1990, and from 1992 to 2006.
- A CN rail line runs along the southern perimeter of the Site.

Based on the above noted issues of concern, it is recommended that a Phase II ESA be conducted at the Site to further investigate potential soil and groundwater issues.

## **7.0 LIMITATIONS AND USE OF REPORT**

This report (the "Report") was prepared for the exclusive use of Toronto Transit Commission for the express purpose of providing advice with respect to the environmental condition of the Site.

The Report is intended to provide a review of available data in accordance with the principal components of CSA Z768-01 *Phase I Environmental Site Assessment* to investigate historical uses, and to identify known and potential sources of contamination at the Site located north of Steeles Avenue West, west of Jane Street, and south of Highway 407 in Vaughan, Ontario and surrounding properties at the time of the Site visit. The Report is based on data and information collected during the Site visit of the property conducted by Golder, and must be considered in its entirety. It is based solely on the conditions on the Site encountered at the time of the Site visit on October 9, 2009, as reported herein. Except as otherwise may be requested, Golder disclaims any obligation to update this Report for events taking place, or with respect to information that becomes available to Golder after the time during which Golder conducted the work. No soil, water, liquid, gas, product or chemical sampling and analytical testing other than that described herein at or in the vicinity of the Site was conducted as part of this Work.

In evaluating the property, Golder has relied in good faith on information provided by other individuals, companies or government agencies noted in the Report. Golder has assumed that the information provided is factual and accurate and Golder has not independently verified the accuracy or completeness of such information. In addition, the findings in this Report are based, to a large degree, upon information provided by the Representative of the Site. Golder accepts no responsibility for any deficiency, misstatement or inaccuracy contained in this Report as a result of omissions, misinterpretations or fraudulent acts of persons interviewed or contacted. Golder makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this letter, including, but not limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to periodic amendment. In addition, regulatory statutes are subject to interpretation and these interpretations may change over time.

The scope and the period of Golder's assessment are described in this Report, and are subject to restrictions, assumptions and limitations. Except as noted herein, the work was conducted in accordance with the scope, terms and conditions of Golder's memorandum to Mr. Hossein Bidhendi of TTC, dated March 25, 2009, approved by Ms. Sabrina Hamidullah, on behalf of TTC, on March 31, 2009. Golder did not perform a complete

assessment of all possible conditions or circumstances that may exist at the site referenced in the Report. Conditions may therefore exist which were not detected given the limited nature of the inquiry Golder was retained to undertake with respect to the Site. Accordingly, additional environmental studies and actions may be required. In addition, it is recognized that the passage of time affects the information provided in the Report. Golder's opinions are based upon information that existed at the time of the writing of the Report. It is understood that the services provided for in the scope of work allowed Golder to form no more than an opinion of the actual conditions at the Site at the time the site was visited, and cannot be used to assess the effect of any subsequent changes in any laws, regulations, the environmental quality of the site or its surroundings. Asbestos and mould surveys were not performed. If a service is not expressly indicated, do not assume it has been provided.

Any use which a third party makes of this Report, or any reliance on or decisions to be made based on it, are the sole responsibility of the third parties. Should additional parties require reliance on this Report, written authorization from Golder will be required. Golder disclaims responsibility of consequential financial effects on transactions or property values, or requirements for follow-up actions and costs.

Should you have any questions concerning this report, or the limitations set herein, please do not hesitate to contact our office.

## 9.0 QUALIFICATIONS OF THE ASSESSORS

### ***Mr. Tony Missiuna, P. Eng.***

Mr. Missiuna is a Principal and Civil Engineer in Golder's Mississauga office. Tony has over 25 years of consulting related experience, predominantly working in the area of site assessment, site audits and remediation. He has managed numerous environmental projects locally and internationally related to environmental site assessment and compliance audits. Project management also includes projects where petroleum hydrocarbons and chlorinated solvents are potential issues and is a recognized expert in this field. In addition to his work in Ontario and other parts of Canada, Tony has and continues to work on projects globally to investigate and solve problems related to subsurface soil and groundwater contamination. He has prepared numerous site assessment work plans subsequently designed numerous remediation systems for petroleum hydrocarbon contamination and chlorinated solvent related impact. Tony works for legal and industrial clients to evaluate sites from a compliance perspective to an assessment perspective which includes investigations to determine the origin and extent of subsurface impact.

### ***Ms. Laura Fuentes de Maria, B.Sc., M.A.Sc.***

Laura Fuentes de Maria is an Environmental Specialist in the Environmental and Corporate Services Division of Golder's Mississauga, Ontario office since 2006. Ms. Fuentes de Maria has experience in Environmental Due Diligence Reviews and Compliance Audits, as well as Phase I and Phase II Environmental Site Assessments for a variety of international clients in the manufacturing, automotive, mining, and electronics sectors in Mexico, Canada, and Argentina.

Ms. Fuentes de Maria graduated with honours from University of Nuevo Leon in Mexico with a Bachelor's Degree in Chemical Engineering in 2001; and, in 2006 obtained a Master's Degree in Chemical Engineering specializing in Environmental Engineering from the University of Toronto. Between degrees Ms. Fuentes de Maria worked at a commercial company in Monterrey, Mexico as Quality Control and Product Development Chief conducting quality control audits.

Report Type: Custom Report, 0.25 km Search Radius

	<u>Section</u>
<b>Report Summary</b>	<b>i</b>
<i>This outlines the number of records from each database that fall on the site, and within various distances from the site.</i>	
<b>Site Diagram</b>	<b>ii</b>
<i>The records that were found within a specified distance from the project property (the primary search radius) have been plotted on a diagram to provide you with a visual representation of the information available. Sites will be plotted on the diagram if there is sufficient information from the database source to determine accurate geographic coordinates. Each plotted site is marked with an acronym identifying the database in which the record was found (i.e., WDS for Waste Disposal Sites). These are referred to as "Map Keys". A variety of problems are inherent when attempting to associate various government or private source records with locations. EcoLog ERIS has attempted to make the best fit possible between the available data and their positions on the site diagram.</i>	
<b>Site Profile</b>	<b>iii</b>
<i>This table describes the records that relate directly to the property that is being researched.</i>	
<b>Detail Report</b>	<b>iv</b>
<i>This section represents information, by database, for the records found within the primary search radius. Listed at the end of each database are the sites that could not be plotted on the locator diagram because of insufficient address information. These records will not have map keys. They have been included because they may be found to be relevant during a more detailed investigation.</i>

## Appendix: Ontario Database Descriptions

EcoLog Environmental Risk Information Services Ltd can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to EcoLog ERIS at the time of update. **Note:** Databases denoted with "\*" indicates that the database will no longer be updated. See the individual database descriptions for more information.

### Provincial Government Source Databases:

#### **Abandoned Aggregate Inventory Up to Sept 2002**

**AAGR**

The MAAP Program maintains a database of all abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.

#### **Aggregate Inventory Up to Mar 2008**

**AGR**

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. Please note that the database is only referenced by lot\concession and city/town location. The databases provides information regarding the registered owner/operator, location, status, licence type, and maximum tonnage.

#### **Abandoned Mines Information System 1800-2005**

**AMIS**

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

#### **Certificates of Approval 1985-Sept 2002**

**CA**

This database contains the following types of approvals: Certificates of Approval (Air) issued under Section 9 of the Ontario EPA; Certificates of Approval (Industrial Wastewater) issued under Section 53 of the Ontario Water Resources Act ("OWRA"); and Certificates of Approval (Municipal/Provincial Sewage and Waterworks) issued under Sections 52 and 53 of the OWRA. For more current Certificate of Approval information please see the EBR database, which will include information such as 'Approval for discharge into the natural environment other than water (i.e. Air) (EPA s.9)', and Approval for sewage works (OWRA s.53(1)).

#### **TSSA Commercial Fuel Oil Tanks 1948-Jan 2009**

**CFOT**

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

#### **Coal Gasification Plants 1987, 1988\***

**COAL**

This inventory of all known and historical coal gasification plants was collected by the Ministry of Environment. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, landuse, soil condition, site operators/occupants, site description, and potential environmental impacts. This information is effective to 1988, but the program has since been discontinued.

**Compliance and Convictions 1989-Jun 2009**

**CONV**

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

**Drill Holes 1886-2005**

**DRL**

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

**Environmental Registry 1994-Jun 2009**

**EBR**

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, licence, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes things like; Approval for discharge into the natural environment other than water (i.e. Air), Permit to Take Water (PTTW), Certificate of Property Use (CPU), Approval for a waste disposal site, Order for preventative measures.(EPA s. 18), Order for conformity with Act for waste disposal sites.(EPA s. 44), Order for remedial work.(EPA s. 17) and many more.

**TSSA Fuel Storage Tanks Current to Dec 2008**

**FST**

The Technical Standards & Safety Authority (TSSA), under the *Technical Standards & Safety Act* of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

**Ontario Regulation 347 Waste Generators Summary 1986-Jun 2009**

**GEN**

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

**Mineral Occurrences 1846-Sept 2008**

**MNR**

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the planimetric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

**Non-Compliance Reports 1992(water only), 1994-2007**

**NCPL**

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

**Ontario Oil and Gas Wells 1800-Jan 2009**

**OOGW**

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. Information available for all wells in the ERIS database include well owner/operator, location, permit start date, well cap date, licence number, status, depth and the primary target (rock unit) of the well being drilled.

**Ontario Inventory of PCB Storage Sites 1987-Oct 2004**

**OPCB**

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

**Pesticide Register 1988-Nov 2008**

**PES**

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

**Private and Retail Fuel Storage Tanks 1989-1996\***

**PRT**

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

**Ontario Regulation 347 Waste Receivers Summary 1986-2005**

**REC**

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

**Record of Site Condition 1997-Sept 2001, Oct 2004-Jun 2009**

**RSC**

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use, such as residential, proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. Information available includes Registration Number, Filing Owner, Property Address, Filing Date and Municipality.

**Ontario Spills 1988-2008**

**SPL**

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

**Wastewater Discharger Registration Database 1990-2006**

**SRDS**

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

**Waste Disposal Sites - MOE CA Inventory 1970-Sept 2002**

**WDS**

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. For more current information for Waste Disposal Sites please see the EBR database, which will include information such as 'Approval for a waste disposal site (EPA s.27)' and 'Approval for use of a former waste disposal site (EPA s.46)'.

**Waste Disposal Sites - MOE 1991 Historical Approval Inventory Up to Oct 1990\***

**WDSH**

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

**Water Well Information System 1955-2008**

**WWIS**

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. Geographic coordinates are reliable according to the given percentage. Wells that are identified with lot and concession only are now also included in the database and is no longer provided as a separate report.

**Federal Government Source Databases:**

**Diagram Identifier:**

**Environmental Effects Monitoring 1992-2007\***

**EEM**

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

**Environmental Issues Inventory System 1992-2001\***

**EIIS**

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

**Federal Convictions 1988-Jun 2007**

**FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

**Contaminated Sites on Federal Land June 2000-May 2009**

**FCS**

The Treasury Board of Canada Secretariat maintains an inventory of all known contaminated sites held by various Federal departments and agencies. This inventory does not include properties owned by Crown corporations, but does contain non-federal sites for which the Government of Canada has accepted some or all financial responsibility. All sites have been classified through a system developed by the Canadian Council of Ministers of the Environment. The database provides information on company name, location, site ID #, property use, classification, current status, contaminant type and plan of action for site remediation.

**Fisheries & Oceans Fuel Tanks 1964-Sept 2003**

**FOFT**

Fisheries & Oceans Canada maintains an inventory of all aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

**Indian & Northern Affairs Fuel Tanks 1950-Aug 2003**

**IAFT**

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of all aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

**National Analysis of Trends in Emergencies System (NATES) 1974-1994\***

**NATE**

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

**National Defence & Canadian Forces Fuel Tanks Up to May 2001\***

**NDFT**

The Department of National Defence and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

**National Defence & Canadian Forces Spills Mar 1999-Jul 2009**

**NDSP**

The Department of National Defence and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

**National Defence & Canadian Forces Waste Disposal Sites 2001-April 2007**

**NDWD**

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

**National Environmental Emergencies System (NEES) 1974-2003**

**NEES**

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for all previous Environment Canada spill datasets. NEES is composed of the historic datasets – or Trends – which dates from approximately 1974 to present. **NEES Trends** is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

**National PCB Inventory 1988-June 2004**

**NPCB**

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. All federal out-of-service PCB containing equipment and all PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites.

**National Pollutant Release Inventory 1993-2007**

**NPRI**

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers of 178 specified substances.

**Parks Canada Fuel Storage Tanks 1920-Jan 2005**

**PCFT**

Canadian Heritage maintains an inventory of all known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

**Transport Canada Fuel Storage Tanks 1970-March 2007**

**TCFT**

With the provinces of BC, MB, NB, NF, ON, PE, and QC; Transport Canada currently owns and operates 90 fuel storage tanks. This inventory will also include The Pickering Lands, which refers to the 7,530 hectares (18,600 acres) of land in Pickering, Markham and Uxbridge - owned by the Government of Canada since 1972. Properties on this land has been leased by the government since 1975, falls under the Site Management Policy of Transport Canada, but administered by Public Works and Government Services Canada. Our inventory provides information on the site name, location, tank age, capacity and fuel type.

**Private Source Databases:**

**Anderson's Waste Disposal Sites 1860s-Present**

**ANDR**

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the *Ontario MOE Waste Disposal Site Inventory*, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. *Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.*

**Automobile Wrecking & Supplies 2001-Feb 2009**

**AUWR**

This database provides an inventory of all known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

**Chemical Register 1992, 1999-Feb 2009**

**CHEM**

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

**ERIS Historical Searches 1999-Apr 2009**

**EHS**

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

**Canadian Mine Locations 1998-2006**

**MINE**

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

**Oil and Gas Wells Oct 2001-Jun 2009**

**OGW**

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickles' database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at [www.nickles.com](http://www.nickles.com).

**Canadian Pulp and Paper 1999, 2002, 2004, 2005**

**PAP**

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

**Retail Fuel Storage Tanks 2000-Feb 2009**

**RST**

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks. Information is provided on company name, location and type of business.

**Scott's Manufacturing Directory 1992-Jun 2008**

**SCT**

Scott's Directories is a data bank containing information on over 70,000 manufacturers in Ontario. Even though Scott's listings are voluntary, it is the most comprehensive database of Ontario manufacturers available. Information concerning a company's address, plant size, and main products are included in this database. This database begins with 1992 information and is updated annually.

**Anderson's Storage Tanks 1915-1953\***

**TANK**

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. *Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.*

# APPENDIX D

## SITE PHOTOGRAPHS

DRAFT

**Photograph 1:** View of the culvert for Black Creek located on the east Site boundary.

**Photograph 2:** General view of the portion of the Site occupied by Rosa & Maria Farms.

**Photograph 3:** View of the diesel AST observed in the Rosa & Maria Farms.

**Photograph 4:** View of the road to access the Rosa & Maria Farms looking north.

**Photograph 5:** View of the agricultural land used by Rosa & Maria Farms looking west.

**Photograph 6:** View of the generator at Rocco Farms.

**Photograph 7:** View inside one of the sheds observed in the area of the Site occupied by Rocco Farms.

**Photograph 8:** View several aboveground storage tanks and drums in Rocco Farms. One of the tanks was used for diesel, and the remaining of the tanks were empty.

**Photograph 9:** View of the agricultural land used by Rocco Farms looking west.

**Photograph 10:** View of the central portion of the Site looking north.

**Photograph 11:** View of the southwest portion of the Site.

**Photograph 12:** View of pond located on the west Site boundary.

**Photograph 13:** View of the central portion of the Site looking east.

**Photograph 14:** View of the creek crossing the Site, water flows from northwest to southeast.

**Photograph 15:** Looking south as seen from underneath the Hydro corridor.

**Photograph 16:** View along the south Site boundary, note the sign for an underground gas pipeline running on-Site.

**Photograph 17:** View of what appears to be a sanitary connection and a vent pipe observed on the southeast area of the Site.

**Photograph 18:** View of the structures observed along the east Site boundary.

**Photograph 19:** View along the north Site boundary looking west.

**Photograph 20:** View of the building and AST in the Black Creek Pumping Station adjacent to the southeast area of the Site.

**Photograph 21:** View of the sheds and portable oil observed in the area of the Site occupied by Nino's Landscaping.

**Photograph 22:** View inside of a shed in the area occupied by Nino's Landscaping.

**Photograph 23:** View inside the greenhouse structure observed in the area occupied by Nino's Landscaping.

**Photograph 24:** View of the miscellaneous materials observed in the portion of the Site occupied by Nino's Landscaping.

At Golder Associates we strive to be the most respected global group of companies specializing in ground engineering and environmental services. Employee owned since our formation in 1960, we have created a unique culture with pride in ownership, resulting in long-term organizational stability. Golder professionals take the time to build an understanding of client needs and of the specific environments in which they operate. We continue to expand our technical capabilities and have experienced steady growth with employees now operating from offices located throughout Africa, Asia, Australasia, Europe, North America and South America.
