**TORONTO-YORK SPADINA SUBWAY EXTENSION
STEELES HYDRO CORRIDOR
CONTRACT NO. A85-77**

Dear Mr. Bidhendi;

Golder Associates Ltd. is pleased to submit the Draft Phase I Environmental Site Assessment for the above referenced Site for your review and comments. The scope of work for this assignment was carried out under Contract No. A85-77 and the amendments as signed and submitted to the Toronto Transit Commission (TTC) on November 14, 2008 for the Toronto-York Spadina Subway Extension (TYSSE). Twenty-nine hard copies and five CDs (PDF copy) of the draft report are provided as required for your distribution.

For the purpose of this report, the project and initial design information described in this report has been based on the information contained in the base plan and alignments provided by TTC to Golder on February 12, 2009, titled TYSSE Alignment Plan and Profile, drawing No. A0328-G3200.

We look forward to continue working with your staff on this project.

Yours truly,

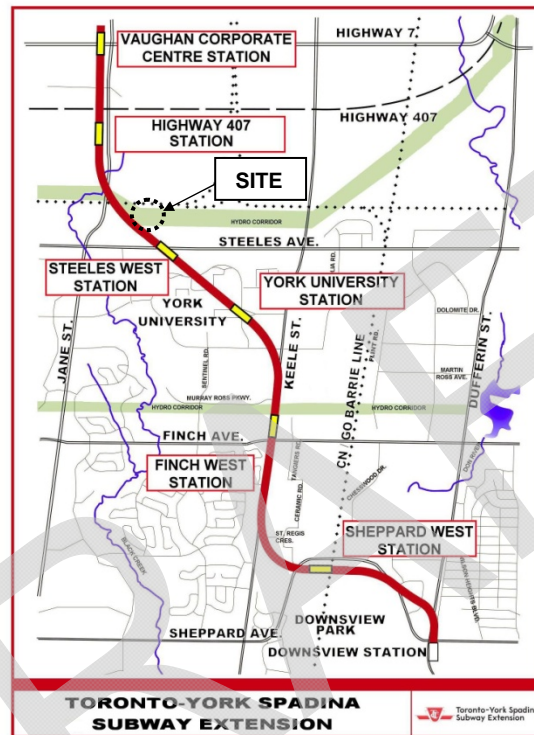

Tony Missiuna, P. Eng.
Principal

MN/ACM/sa

STEELES STATION TORONTO-YORK SPADINA SUBWAY EXTENSION

Record of Issue

B	October 16, 2009	Draft Report	Electronic PDF

Internal File Location: TYSS PWS > 2500 ESA > 2520 Phase 1 > 252034 Steeles Hydro Corridor - Steeles West Station

Executive Summary

Golder Associates Ltd. ("Golder") was retained by Toronto Transit Commission ("TTC") to conduct a Phase I Environmental Site Assessment ("Phase I ESA") of the Steeles Hydro corridor which is a parcel of land located on the north side of Steeles Avenue West, west of Keele Street, and east of Jane Street in Vaughan, Ontario (the "Site"). The Site is an irregular piece of land that is developed as a Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west. Twelve (12) towers are present on-Site. This parcel of land is proposed to be developed by TTC as a parking lot for the Steeles West Station. At the time of Golder's Site visit (April 8, 2009), the Site was owned by the Government of Ontario and administered by Ontario Realty Corporation (ORC).

The Phase I ESA was completed in accordance with the Canadian Standards Association document Z768-01 'Phase I - Environmental Site Assessments' including, but not limited to a review of available current and historical information of the Site and surrounding properties, a Site walkover, interviews with available Representatives, evaluation of readily available information, and reporting, subject to the limitations outlined in Section 7.0 of this report.

The following summarizes the findings of the Phase I ESA. The Phase I ESA findings are based on acquired evidence of historical and/or actual and/or potential environmental impact, and represent those potential environmental issues that may have a material impact on the Site or operations contained within. It should be noted that with respect to potential material deviations from the CSA Standard, responses to Golder's request for information from the Ontario Ministry of Environment, Region of York, and the Toronto and Region Conservation Authority could not be made without a municipal address for the Site. In addition, Golder was not accompanied by a Site Representative during the Site visit.

- Approximately 2,800 sq. m. on the western portion of the Site was being used for the growing of crops (vegetables). Reportedly, no pesticides or herbicides have been used. The on-Site historical use of pesticides and herbicides is unknown, and may represent a potential issue of environmental concern for the Site.
- Miscellaneous debris was observed on the central portion of the Site on an area of approximately 30 by 50 meters in size. The debris included an empty plastic tank, several empty drums, wooden pallets, tires, empty buckets, appliances, an empty metal tank, wood logs, propane tanks, a couple of car batteries, etc. A boat on trailer was also observed on the property (appeared to be stored on the property).
- A CN rail line runs along the northern perimeter of the Site. The EcoLog ERIS report listed the Canadian National Railway at the corner of Jane St. and Steeles Ave. W. (inferred upgradient) for the release of 90 L of diesel on February 16, 1999 onto ground and ditch due to a train derailment. According to the EcoLog ERIS report, the release was cleaned up, and was listed as having possible environmental impact to soil. This location appears to be upgradient from the Site.

1.0 INTRODUCTION

1.1 Background

Golder Associates Ltd. ("Golder") was retained by Toronto Transit Commission ("TTC") to conduct a Phase I Environmental Site Assessment ("Phase I ESA") of the Steeles Hydro corridor which is a parcel of land located on the north side of Steeles Avenue West, west of Keele Street, and east of Jane Street in Vaughan, Ontario (the "Site"). The Site is an irregular piece of land that is developed as a Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west. Twelve (12) towers are present on-Site. This parcel of land is proposed to be developed by TTC as a parking lot for the Steeles West Station. At the time of Golder's Site visit (April 8, 2009), the Site was owned by the Government of Ontario and administered by Ontario Realty Corporation (ORC).

A Phase I ESA is a preliminary qualitative assessment of the environmental condition of a property, based on a review of current activities and historical information for the subject property and also a review of available environmental related information for the surrounding properties. The objective of the Phase I ESA is to identify and report on evidence of actual and/or potential contamination on a property from current activities at the property or from adjacent properties. The Phase I ESA is also used to identify environmental concerns from historical activities at the property. The Phase I ESA is designed to identify and report on evidence of actual or potential environmental impact at the Site.

The Site location and Site and Surrounding Land Use including any on-Site identified areas of potential environmental concern are shown on **Figure 1**.

1.2 Scope of Work

Golder's assignment was completed in accordance with the terms and conditions outlined in the Golder's memorandum to Mr. Hossein Bidhendi of TTC, dated March 25, 2009. Authorization to proceed was provided to Golder by Ms. Sabrina Hamidullah, on behalf of TTC, on March 31 2009.

The Phase I ESA was completed in accordance with the Canadian Standards Association document Z768-01 '*Phase I - Environmental Site Assessments*' including, but not limited to a review of available current and historical information of the Site and surrounding properties, a Site walkover, interviews with available Representatives, evaluation of readily available information, and reporting, subject to the limitations outlined in Section 7.0 of this report.

Golder was not accompanied by a Site Representative during the Site visit. Golder attempted to contact Mr. Brian McCormick, Manager of Environmental Services and Approvals, from Hydro One on several occasions for information on the environmental condition of the Site. In an email dated June 11, 2009, Mr. McCormick indicated that he was not aware of previous environmental site assessments for the Site, and that Hydro does not maintain soil contamination databases. Mr. McCormick also added that any soil contamination at the Site is not likely to be the result of Hydro One operations.

The Site visit included a walk-through of accessible areas of the Site, as well as observations from the Site of adjoining properties and publicly accessible locations.

2.0 SITE DESCRIPTION

2.1 Topographic, Geologic and Hydrogeologic Conditions

Topic	Conditions	Comment / Source
Subsurface Soils	Predominantly silt to silty clay matrix, high in matrix carbonate content and clast poor; Halton Till.	Ontario Ministry of Northern Development and Mines, Ontario Geological Survey, Map 2556, "Quaternary Geology of Ontario, Southern Sheet", 1991.
Type of Bedrock	Georgian Bay Formation consisting of shale, limestone, dolostone and siltstone.	Ontario Ministry of Northern Development and Mines, Map No. 2544, "Bedrock Geology of Ontario, Southern Sheet", 1991.
Depth to Bedrock	Inferred to be greater than 35 metres below ground surface (mbgs).	Based on results of the "Preliminary Geotechnical Design Steeles West Station Spadina Subway Extension" by Golder Associates Ltd., July 2008.
Depth to Groundwater	Shallow groundwater is inferred to be approximately 3 to 5 mbgs. Also the potential to encounter perched groundwater exists within this area.	Based on results of the "Preliminary Geotechnical Design Steeles West Station Spadina Subway Extension" by Golder Associates Ltd., July 2008.
Nearest Open Water Body	Black Creek is located approximately 400 m to the west of the Site.	Energy, Mines and Resources Canada Topographic Map No. 30 M/13 - "Bolton", Edition 7.
Slope of Site Ground Surface	The area of the Site is generally uneven. However, the Site has a general slope down towards the west southwest.	Based on visual observations.
Inferred Near Surface Groundwater Flow	Near surface groundwater is inferred to follow the topography of the area, flowing towards Black Creek to the southwest.	Visual observations. Energy, Mines and Resources Canada Topographic Map No. 30 M/13 - "Bolton", Edition 7.
Topography of Site and Surrounding Area	The Site is generally uneven. A wooded area is located on the northeast portion of the Site including a natural pond. Other areas with ponded water were observed throughout the Site as a result of a recent rain event. The general area surrounding the Site slopes slightly towards the west to southwest.	Energy, Mines and Resources Canada Topographic Map No. 30 M/13 - "Bolton", Edition 7; and visual observations.

PHASE I ESA STEELES HYDRO CORRIDOR, VAUGHAN, ON

Topic	Conditions	Comment / Source
Site Grade Relative to the Adjoining Properties	<p>The eastern portion of the Site appeared to be at grade to the properties to the east and south. The CN rail line located along the northern Site boundary is at a lower elevation than the Site (approximately 1.5 m). Further properties to the north appeared to be at grade in relation to the Site.</p> <p>The western portion of the Site appeared to be at a higher elevation than the properties to the south and west. The properties to the north appeared to be at grade in relation to the Site.</p>	<p>Based on visual observations.</p>
Water Wells on Site (Depth, Drilling Date, Use)	<p>None observed or reported.</p>	<p>Based on visual observations.</p>
Water Wells on the Neighbouring Properties	<p>Three monitoring wells were observed on the vacant property immediately adjacent to the south of the Site. See Section 4.4.</p>	<p>Based on visual observations.</p>
Presence of Fill Material on-Site	<p>A small pile of what appeared to be gravel material was observed near the natural pond.</p>	<p>Based on visual observations.</p>
Prominent Physical Features on-Site or Surrounding Area	<p>The Site is developed as a Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west. Twelve (12) towers are present on-Site.</p> <p>A wooded area and a natural pond were observed on the northeast portion of the Site. An underground natural gas pipeline runs east-west at the Site.</p> <p>A CN rail line is located along the northern Site boundary. A cemetery is located approximately 200 m north of the Site.</p>	<p>Based on visual observations.</p>

2.2 Site Physical Description

Topic	Observations	Comment / Source
Site Area	The Site an irregular parcel of land. The approximate area of the Site is 214,212 sq. m.	Google Map Image, 2005.
Number of Buildings on the Site	What appeared to be an portable shed was observed on the western portion of the Site. An abandoned shed was observed near the pond on the northeastern portion of the Site.	Based on visual observations.
Approximate Floor Space of Buildings	The shed observed on the western portion of the Site has an approximate area of 16 sq. m.	Visual observations.
Approximate Percentage of Site Covered by Site Building(s)	Less than 1%.	Based on visual observations.
Approximate Percentage of Site Consisting of Landscaped/ Grassed/Bare Ground Areas	More than 99%. Approximately 2,800 sq. m. on the western portion of the Site were being used for the growing of crops.	Based on visual observations.
Approximate Percentage of Site Consisting of Paved or Other Sealed Surface Materials	0%	Based on visual observations.
Number of Floors (include all levels, whether above or below ground)	Not applicable.	Based on visual observations.
Number of Levels Below Ground Level	Not applicable.	Based on visual observations.

2.3 Site Operations

The Site is developed as a Hydro corridor with three (3) tower lines (two lines are 500 kV, and one line is 230 kV) running east-west. Twelve (12) towers are present on-Site. Golder understands that the Site was owned by the Government of Ontario and administered by Ontario Realty Corporation. The towers are constructed on concrete foundations, and the rest of the Site was covered with overgrown vegetation. A wooded area and a pond were observed on the northeast portion of the Site. An abandoned shed was observed next to the pond but could not be accessed. An Enbridge natural gas underground line runs east-west on the northern portion of the Site.

Several pipes associated with the Black Creek Pump Station were also observed on the northern portion of the Site, west of the wooded area. Miscellaneous debris was observed on the central portion of the Site on an area approximately 30 by 50 meters in size. The debris included an empty plastic tank, several empty drums, wooden pallets, tires, empty buckets, appliances, an empty metal tank, wood logs, propane tanks, a couple of car batteries, etc. A boat on trailer was also observed on the property (appeared to be stored on the property).

Storm water management ditches were observed along the northern perimeter of the Site, and on the southeastern and southwestern corners of the Site.

The western portion of the Site was being used for agricultural purposes (an area of approximately 2,800 sq. m.). Reportedly, the growing of different crops has been conducted for approximately the last 16 years. One shed and a small tractor were observed in this area. At the time of the Site visit, a bonfire was being started by a person related to crop planting. Several piles of garbage, construction and miscellaneous debris (i.e. tires, metal pieces, plastics, empty drums, etc.), and two abandoned automobiles were also observed in this area of the Site.

3.0 HISTORICAL RECORDS REVIEW

3.1 Site Interviews and Documents

Golder was not accompanied by a Site Representative during the Site visit. No previous environmental reports relating to the Site were provided to Golder for review.

Golder attempted to contact Mr. Brian McCormick, Manager of Environmental Services and Approvals, from Hydro One on several occasions for information on the environmental condition of the Site. In an email dated June 11, 2009, Mr. McCormick indicated that he is not aware of previous environmental site assessments for the Site, and that they do not maintain soil contamination databases. Mr. McCormick also added that any soil contamination at the Site is not likely to be the result of Hydro One operations.

3.2 Aerial Photographs

Golder reviewed aerial photographs dated 1950, 1960, 1974, and 1984, obtained from the National Air Photo Library, to help understand the history of the development of the Site and surrounding properties (within 200 m). Information obtained from the review of the aerial photographs is summarized in the table below. Copies of all the aerial photographs are presented in **Appendix A**.

Date	Site	Surrounding Properties
1950	Agricultural land; a small cleared area is visible on the northeast corner of the Site.	North: Agricultural land, including a roads extending for more than 200 m. East: Agricultural land. South: Agricultural land with what appears to be a structure is visible adjacent to the Site. Steeles Avenue is further south with agricultural and vegetated land beyond. West: Jane Street followed by agricultural land. Black Creek is visible further west.

Date	Site	Surrounding Properties
1960	Similar to the 1950 aerial photograph.	<p>North: Similar to 1950 aerial photograph.</p> <p>East: Similar to 1950 aerial photograph.</p> <p>South: Similar to 1950 aerial photograph.</p> <p>West: Similar to 1950 aerial photograph with the addition of cleared land to the northwest of the Site.</p>
1974	The Site area appears to be undeveloped, with a cleared area on the western portion of the Site.	<p>North: What appears to be evidence of the cemetery is observed a short distance beyond the rail lines (which are located) immediate adjacent to the north of the Site. The area to the northeast of the Site appears to have been improved with buildings.</p> <p>East: Vacant or agricultural land.</p> <p>South: A cleared area is observed to the southeast of the Site extending to Steeles Avenue. Several buildings and a residential development are observed further south southwest.</p> <p>West: Agricultural land and Black Creek are visible.</p>
1984	The Site area appears to be covered with vegetation. Several dirt roads are observed on the western portion of the Site.	<p>North: Vegetated land and what appears to be the cemetery located a short distance beyond rail lines are visible to the north of the Site. What appears to be an industrial/commercial development is observed further north and northeast of the Site.</p> <p>East: Vegetated land extending to Keele St.</p> <p>South: Similar to the 1974 aerial photograph with additional development south of Steeles Avenue.</p> <p>West: Similar to the 1974 aerial photograph with additional residential and commercial development to the southwest of the Site.</p>

Based on the aerial photograph review, the Site was mainly used for agricultural and vegetated land. Development of the areas surrounding the Site appears to have begun between 1960 and 1974, including the construction of rail lines, industrial developments and a cemetery to the north of the Site; and residential and commercial developments to the south of the Site.

3.3 Review of Street Directories

City street directories were reviewed to develop an occupancy history for the Site and surrounding properties. Street directories were reviewed for years 1960, 1970/71, 1981/1982, 1991, and 2000/2001. The following summarizes the noteworthy findings of the street directory searches:

SITE

- The Site appears to be listed in the 1991 and 2000/2001 directories under Black Creek Pumping Station.

SURROUNDINGS

- Jane Street is listed as early as 1970. The location 7171 Jane St. is listed in the 1991 and 2000/2001 directories under Davis Distributing Limited, and Premdor Century, Inc., UAP Auto Parts, respectively. The location 7230 Jane St is listed in the 20001/2001 directory as Rocco Farms. The locations 7241 and 7243 Jane St. were listed for Truman WD and Beechwood Cemetery Downs as early as 1970/1971.
- Steeles Avenue West is listed as early as 1991. The location 2700 Steeles Avenue West was listed under Graphstar Communications Inc. in the 1991 directory, and under Aercol Airguard Industries a Division of Delcan Filtration Inc., Aventech Research Inc., Delcon Filtration Inc., and Roadhawk Express in the 2000/2001 directory. The location 2720 Steeles Avenue West was listed in the 1991 directory under Dynesco Inc., and Jasper Construction Inc.; and as Captus Press Inc., and Quebecor Printpak in the 2000/2001 directory.

Based on the inferred down-gradient location of the properties located on Steeles Avenue West, they are not expected to present a potential issue of environmental concern for the Site at this time. The properties listed on Jane Street are considered to be an at inferred upgradient location from the Site.

3.4 Land Title Information

No records of Land Title information were provided to Golder by TTC in relation to the Site.

3.5 Review of Insurance Maps and Reports

Golder conducted a search of Fire Insurance Plans ("FIPs"), Property Underwriters' Reports ("PURs") and Property Underwriters' Plans ("PUPs") related to the Site and surrounding areas. However, no records were found for the area where the Site is located.

3.6 Previous Investigations

Golder was not provided with previous investigations in relation to the Site.

4.0 REGULATORY INFORMATION

Requests were made to regulatory agencies in order to establish if there is information on file pertaining to the environmental status of the Site. It should be noted that several of the requests listed below were not completed as these require a municipal address for the Site to be provided. The available results of these requests are described below.

4.1 Ontario Ministry of Environment

A formal request to the Freedom of Information office of the Ministry of Environment to determine if they have a file with respect to the Site could not be made without a municipal address for the Site.

4.2 Region of York

A request for information to the Region of York for records and information relating to any environmental concerns, including spills and complaints could not be made without a municipal address for the Site.

4.3 Toronto and Region Conservation Authority

A request to the Toronto and Region Conservation Authority for records and information relating to any regulations, permits and areas affected, assessments, fill areas, violations regarding the Site could not be made without a municipal address for the Site.

4.4 Regulatory Databases

Golder contracted the services of EcoLog Environmental Risk Information Services Ltd. ("EcoLog ERIS") to conduct a search of their federal, provincial and private sector databases for information on the Site and surrounding area (i.e. 250 m around the Site). The complete EcoLog ERIS report, including a brief description of each of the databases searched for this Phase I ESA, is included in **Appendix C**. The following is a summary of the noteworthy findings as identified within the EcoLog ERIS report:

SITE

No listings are provided for the Site in the EcoLog ERIS report.

SURROUNDING PROPERTIES WITHIN 250 m FROM THE SITE

Certificates of Approval

The EcoLog ERIS report listed four locations within a 250 m radius of the Site as having Certificates of Approval (C of A) for municipal water, municipal sewage, and industrial air. The C of A are listed as approved.

Compliance and Convictions

The EcoLog ERIS report listed the Canadian National Railway with a fine of \$8,000 on June 20, 1995 for failing to notify the Ministry of a release of used oil onto a storm water sewer.

Environmental Registry

Quebecor World Inc. at 2720 Steeles Ave. W. located adjacent to the south of the Site, is approved for the discharge into natural environmental other than water (i.e. air), in 2003.

ERIS Historical Searches

Six locations within 250 m from the Site have been searched from 2001 to 2008.

Fuel Storage Tanks

United Parcel Service Canada Ltd., at 2900 Steeles Ave. W. (inferred downgradient) located adjacent to the south of the Site, is listed twice under the Fuel Storage Tank database for five underground storage tanks ("USTs"). The fuel tanks were described as single walled with a capacity of 46,460 L (each); the tanks appeared as active, were installed in 1988, and licensed in 1990. Three tanks are for gasoline storage and two tanks for diesel storage.

Ontario Regulation 347 Waste Generators Summary

The EcoLog ERIS report listed approximately fifteen properties located within a 250 m radius of the Site as generators of a range of hazardous wastes, including but not limited to halogenated pesticides, light fuels,

halogenated, aromatic, and aliphatic solvents, organic and inorganic laboratory chemicals, waste oils and lubricants, non-halogenated pesticides, waste compressed gases, paint/pigment/coating residues, petroleum distillates, alkaline solutions, miscellaneous waste organic chemicals, emulsified oils, photo processing wastes, polymeric resins, etc.). The companies listed included the following (inferred downgradient or transgradient): Canadian Tennis Association, United Parcel Service Canada Limited, Wajax Fluid Power, Dynesco Inc., Interwood Marketing Group, Beta Reproduction Inc., Northview Print & Copy Inc., ICI Canada, St. Clair Paint and Wallpaper, Clairtone Professional Paints, UAP Inc., and Davis Distributing Ltd., etc.

Inferred upgradient properties included the Regional Municipality of York at the Black Creek Sewage Pumping Station to the northwest of the Site for wastes related to waste oils and lubricants, aliphatic solvents, pigments, coatings and paints, and oil skimmings and sludge; and the Beechwood Cemetery at 7241 Jane St. to the north of the Site for wastes related to waste oils and lubricants.

National Analysis of Trends in Emergencies System (NATES)

MBF Industries at North York is listed for the release of 1,460 L of sulphuric acid, 1,460 L of iron mass to the St. Lawrence River Drainage due to an equipment failure, with a 100% of recovery. No more details were provided.

HallTech Inc. is listed for the release of 4,000 L of methylene chloride to the St. Lawrence River Drainage due to corrosion. No more details were provided.

National Environmental Emergencies System (NEES)

MBF Industries at North York is listed for the release of sulphuric acid and iron mass in 1987. No more details were provided.

HallTech Inc. is listed for the release of methylene chloride and neoprene contact cement in 1984 and 1988, respectively. No more details were provided.

The Canadian National Railways at Vaughan Town is listed for the release of waste oil, methanol, ferric chloride, diesel fuel, and ink in 1988. No more details were provided.

National PCB Inventory

Megaventures International Inc. at 3100 Steeles Ave. W. (inferred downgradient) was listed in the database in 1990. No more details were provided.

Pesticide Register

HY & Zels Distribution Centre at 2600 Steeles Ave. W. (inferred downgradient) is listed as a limited vendor.

Private and Retail Fuel Storage Tanks

United Parcel Service Ltd. at 2900 Steeles Ave. W. (inferred downgradient) located approximately 200 metres south of the Site is listed for private fuel outlet and for a carburation centre in 1994 and 1993.

Scott's Manufacturing Directory

A total of 23 companies located within a 250 m radius of the Site were listed. Masonite International Corp. and Davis Distributing Limited were listed at 7171 Jane St. (inferred upgradient) for other speciality-line building supplies wholesale distributors, and for tobacco and tobacco products; the companies were established in 1991 and 1940, respectively.

The other companies listed are located at inferred downgradient locations from the Site and include the following operations: software publishers; distribution of other new motor vehicle parts and accessories, industrial machinery and equipment, plumbing, heating and air conditioning equipment; curtain and linen mills; manufacturing of blind and shade, other plastic product, metal window and door, wood kitchen cabinets; wood

household furniture, finish carpentry contractors; commercial screen, lithographic, quick, digital, and other printing; bread and other bakery products; etc.

Ontario Spills

A total of 13 spills were listed within a 250 m radius of the Site. Canadian National Railway at the corner of Jane St. and Steeles Ave. W. (inferred upgradient) was listed for the release of 90 L of diesel on February 16, 1999 onto ground and ditch due to a train derailment. According to the EcoLog ERIS report, the release was cleaned up, and was listed as having possible environmental impact to soil.

The other releases listed are located at inferred downgradient locations from the Site and included the following materials and substances: sewage overflow from sanitary manhole, thinner leak from UST, ethylene glycol (antifreeze), gasoline, waste oil, hydraulic oil, and paint. Volumes ranged from 15 L to 675 L.

Water Well Information System

Eleven (11) listings are provided for wells within 250 metres from the Site, the majority of the wells are for water supply, and observation purposes. Six wells are listed to the north of the Site (inferred upgradient). Of the eleven wells listed north of the Site, four of these wells are listed for water supply purposes, one is listed as abandoned, and one as an observation well. The wells were drilled up to 202 ft. below ground surface. The remaining five (5) wells located at an inferred downgradient location from the Site were listed for water supply and observation purposes. These wells were drilled up to 295 ft. below ground surface.

5.0 SITE VISIT FINDINGS

Ms. Jody McKeown and Laura Fuentes de Maria of Golder's Environmental and Corporate Services Division conducted a Site visit on April 8, 2009. Golder was not accompanied by a Site Representative during the Site visit. The Site visit was documented with photographs and additional notes. References are made to Site conditions as observed at the time of the Site visit. At the time of the Site visit on April 8, 2009, the weather conditions were sunny and windy, and the temperature was approximately 4°C. The Site visit included a walk-around the Site. Small portions of the Site were covered with ice and snow at the time of the Site visit. Photographs of some of the features noted during the Site visit are attached in **Appendix D**.

The Site reconnaissance also included a cursory inspection of neighbouring properties from the Site and publicly accessible areas.

The results of the Site visit are presented below.

5.1 Air Emissions

Topic	Observations/Findings
Process Exhausts	Not applicable. No buildings present on-Site.
Heating and Cooling System(s)	Not applicable. No buildings present on-Site.
Other Exhausts	Not applicable. No buildings present on-Site.
Odours	No strong, pungent or noxious odours were noted during the Site visit.
Visible Emissions	Only emissions observed related to the bonfire observed on the western portion of the Site.

5.2 Water and Wastewater Discharges

Topic	Observations/Findings
Water Supply Source	Not applicable. No buildings present on-Site.
Water Use	Not applicable.
Wastewater Treatment	Not applicable. No buildings present on-Site.
Sanitary/Process Wastewater Receptor	Not applicable. No buildings present on-Site.
Sanitary Sewer Connection	Not applicable. No buildings present on-Site.
Septic Systems	Not applicable. No buildings present on-Site.
Storm Water Flow	Partially corrugated steel pipes were observed throughout the Site; it appears that these pipes are used for storm water management directing the storm water to the Site perimeters.
Storm Sewer Connection	Not applicable.
Storm Water Infiltration	Storm water infiltrates into the subsurface, evaporates and/or sheet flows towards the stormwater channels observed along the northern perimeter of the Site, and on the southwestern and southeastern corners of the Site.
Watercourses, Ditches or Ponded Water	A pond was observed on the northeastern portion of the Site. In addition, small areas of ponded water were observed throughout the Site.

5.3 Hazardous and Non-hazardous Waste

Topic	Observations/Findings
Hazardous Wastes Produced and Originating Processes	None reported or observed. No buildings present on-Site.
Storage of Hazardous Wastes	Hazardous wastes were not observed to be stored on-Site.
Staining or Evidence of Upset in Hazardous Waste Storage Areas	None observed or reported. Small portions of the Site were snow covered at the time of the Site visit.
Removal of Hazardous Waste	Hazardous wastes are not generated at the Site. No buildings present on-Site.
Non-hazardous Wastes	Miscellaneous debris was observed on the central portion of the Site on an area of approximately 30 by 50 meters in size. The debris included an empty plastic tank, several empty drums, wooden pallets, tires, empty buckets, appliances, an empty metal tank, wood logs, propane tanks, a couple of car batteries, etc. A boat on trailer was also observed on the property (appeared to be stored on the property). Other piles of construction debris and wastes including metal pieces, scrap plastic pipelines, tires, empty buckets, wood, bricks, were observed on the western portion of the Site where agricultural activities were being

Topic	Observations/Findings
	conducted.
Recyclables	Not applicable. No buildings present on-Site.

5.4 Materials and Chemicals

Topic	Observations/Findings
Material Use and Storage	A few plastic containers were observed on the western portion of the Site. The containers appeared to be used for collecting storm water to be used for irrigation purposes. No other substances or chemicals were observed on-Site.
In-floor or In-ground Sumps, Trenches or Pits	Not applicable. No buildings present on-Site.
Grease Traps Present	Not applicable. No buildings present on-Site.
Oil / water Separators Present	Not applicable. No buildings present on-Site.
Hydraulic Hoists Present	Not applicable. No buildings present on-Site.
Staining or Evidence of Upset	None observed. Portions of the Site were lightly snow covered and/or wet due to recent snow and rain fall limiting visual inspection.

5.5 Asbestos-Containing Materials (“ACMs”)

Topic	Observations/Findings
Potential Friable ACMs and Potential Non-Friable ACMs	Not applicable. There were no buildings on-Site.

5.6 Polychlorinated Biphenyls (“PCB”) Containing Materials and Equipment

Topic	Observations/Findings
Electricity Source	Not applicable. No buildings present on-Site.
Transformer(s)	Not applicable. No buildings present on-Site.
Capacitors	Not applicable. No buildings present on-Site.
Light Ballasts	Not applicable. No buildings present on-Site.
Elevators on-Site (Use and Type)	Not applicable. No buildings present on-Site.

5.7 Special Attention Items

Topic	Observations/Findings
Lead-Based Paints (“LBPs”)	Not applicable. No buildings present on-Site.
Ozone-Depleting Substances (“ODSs”)	Not applicable. No buildings present on-Site.
Radon Gas	Not applicable. No buildings present on-Site. Considering that soils in this part of Ontario have a low radon gas generating potential, radon is not considered to be an environmental issue of concern at the Site.
Urea Formaldehyde Foam Insulation (“UFFI”)	Not applicable. No buildings present on-Site.
Mould	Not applicable. No buildings present on-Site.
Pesticides and Herbicides	Approximately 2,800 sq. m. on the western portion of the Site were being used for the growing of crops. Reportedly, no pesticides or herbicides have been used. The on-Site historical use of pesticides and herbicides is unknown, and may represent a potential issue of environmental concern for the Site.
Mercury Containing Equipment	Not applicable. No buildings present on-Site.
Radioactive materials	Not applicable. No buildings present on-Site.

5.8 Storage Tanks

5.8.1 Aboveground Storage Tanks (“ASTs”)

No aboveground storage tanks were observed on-Site.

5.8.2 Underground Storage Tanks (“USTs”)

No evidence of underground storage tanks (“USTs”), such as fill pipes and vent pipes, was observed on-Site during the Site visit.

Other underground structures observed at the Site included an Enbridge natural gas pipeline running east-west on the northern portion of the Site; and a several pipes associated with the Black Creek Pump Station on the northern portion of the Site.

5.9 Spills

A spill is broadly termed an event or release that may cause, or is likely to cause, adverse effects on human health or the natural environment. Spills may occur during the use, storage and/or transfer of such materials located on-Site, and may result in significant environmental impact if not managed appropriately.

No significant ground staining was observed at the time of the Site visit. No evidence of discharges or upsets of chemicals were observed on-Site. Note that portions of the Site were lightly snow covered and/or wet due to recent snow and rain fall limiting visual inspection.

5.10 Surrounding Land Use

During the Site visit, a visual reconnaissance of the outdoor operations of the adjacent properties that may potentially impact the Site was carried out from the subject Site and publicly accessible areas.

The surrounding properties include industrial, commercial and institutional occupancies, as detailed on **Figure 1**.

North (Inferred Upgradient)

A CN rail line runs along the northern perimeter of the Site. To the northwest a multitenant industrial building occupied by Encore Sales Distribution Centre, Masonite International Corporation, and Noble Trade was observed. Further to the northwest, the Beechwood Cemetery and Mausoleum extends for more than 500 m to Highway 407. The area to the northeast of the Site is occupied for several industrial buildings including Heritage Trim, Custom Cabinet and Finishing, New Toro Plating and Polishing Co. Ltd., Engineered Foam Products, Sunview Doors Ltd., Global Phoenix, Fileco, and other industries related to woodworking, auto repairs, metal works.

East (Inferred Up to Trans-gradient)

The Hydro corridor extends to the east of the Site for 800 m to a property identified as GP Farm, and one commercial building occupied by Canada Trust, followed by Keele Street.

South (Inferred Downgradient)

The UPS building with associated parking lots, a couple of sheds, and one AST for propane were observed immediately to the southwest of the Site. The central portion of the Site is bordered to the south by a vacant lot, three monitoring wells were observed on this area.

The southeastern portion of the Site is adjacent to four multitenant buildings occupied for commercial and industrial purposes. Some of the tenants include Camfil, Northview Print and Copy Inc., Mera Window Fashions, Holiday Home Fashions, Stiel Drapery Hardware, Arcadia Aluminum Inc., Glen Properties, TY Global Imports, etc.

Steeles Avenue West is located further south followed by the York University Keele Street campus including York Stadium, a soccer field, Ice Gardens, the Toronto Track & Field Centre, the Sherman Health Science Research Centre, and several parking lots.

West (Inferred Down to Trans-gradient)

Jane St. is located immediately adjacent to the west of the Site, followed by a mix of vacant and residential space. Black Creek is located approximately 400 m to the west of the Site. Several industrial building are located further west.

6.0 FINDINGS AND CONCLUSIONS

The following summarizes the findings of the Phase I ESA. The Phase I ESA findings are based on acquired evidence of historical and/or actual and/or potential environmental impact, and represent those potential environmental issues that may have a material impact on the Site or operations contained within. It should be noted that with respect to potential material deviations from the CSA Standard, responses to Golder's request for

information from the Ontario Ministry of Environment, Region of York, and the Toronto and Region Conservation Authority could not be made without a municipal address for the Site. In addition, Golder was not accompanied by a Site Representative during the Site visit.

- Approximately 2,800 sq. m. on the western portion of the Site was being used for the growing of crops (vegetables). Reportedly, no pesticides or herbicides have been used. The on-Site historical use of pesticides and herbicides is unknown, and may represent a potential issue of environmental concern for the Site.
- Miscellaneous debris was observed on the central portion of the Site on an area of approximately 30 by 50 meters in size. The debris included an empty plastic tank, several empty drums, wooden pallets, tires, empty buckets, appliances, an empty metal tank, wood logs, propane tanks, a couple of car batteries, etc. A boat on trailer was also observed on the property (appeared to be stored on the property).
- A CN rail line runs along the northern perimeter of the Site. The EcoLog ERIS report listed the Canadian National Railway at the corner of Jane St. and Steeles Ave. W. (inferred upgradient) for the release of 90 L of diesel on February 16, 1999 onto ground and ditch due to a train derailment. According to the EcoLog ERIS report, the release was cleaned up, and was listed as having possible environmental impact to soil. This location appears to be upgradient from the Site.

7.0 LIMITATIONS AND USE OF REPORT

This report (the "Report") was prepared for the exclusive use of Toronto Transit Commission for the express purpose of providing advice with respect to the environmental condition of the Site.

The Report is intended to provide a review of available data in accordance with the principal components of CSA Z768-01 *Phase I Environmental Site Assessment* to investigate historical uses, and to identify known and potential sources of contamination at the Site identified as the Steeles Hydro corridor located on the north side of Steeles Avenue West, west of Keele Street, and east of Jane Street in Vaughan, Ontario and surrounding properties at the time of the Site visit. The Report is based on data and information collected during the Site visit of the property conducted by Golder, and must be considered in its entirety. It is based solely on the conditions on the Site encountered at the time of the Site visit on April 8, 2009, as reported herein. Except as otherwise may be requested, Golder disclaims any obligation to update this Report for events taking place, or with respect to information that becomes available to Golder after the time during which Golder conducted the work. No soil, water, liquid, gas, product or chemical sampling and analytical testing other than that described herein at or in the vicinity of the Site was conducted as part of this Work.

In evaluating the property, Golder has relied in good faith on information provided by other individuals, companies or government agencies noted in the Report. Golder has assumed that the information provided is factual and accurate and Golder has not independently verified the accuracy or completeness of such information. In addition, the findings in this Report are based, to a large degree, upon information provided by the Representative of the Site. Golder accepts no responsibility for any deficiency, misstatement or inaccuracy contained in this Report as a result of omissions, misinterpretations or fraudulent acts of persons interviewed or contacted. Golder makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this letter, including, but not limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to periodic amendment. In addition, regulatory statutes are subject to interpretation and these interpretations may change over time.

The scope and the period of Golder's assessment are described in this Report, and are subject to restrictions, assumptions and limitations. Except as noted herein, the work was conducted in accordance with the scope,

terms and conditions of Golder’s memorandum to Mr. Hossein Bidhendi of TTC, dated March 25, 2009, approved by Ms. Sabrina Hamidullah, on behalf of TTC, on March 31, 2009. Golder did not perform a complete assessment of all possible conditions or circumstances that may exist at the site referenced in the Report. Conditions may therefore exist which were not detected given the limited nature of the inquiry Golder was retained to undertake with respect to the Site. Accordingly, additional environmental studies and actions may be required. In addition, it is recognized that the passage of time affects the information provided in the Report. Golder’s opinions are based upon information that existed at the time of the writing of the Report. It is understood that the services provided for in the scope of work allowed Golder to form no more than an opinion of the actual conditions at the Site at the time the site was visited, and cannot be used to assess the effect of any subsequent changes in any laws, regulations, the environmental quality of the site or its surroundings. Asbestos and mould surveys were not performed. If a service is not expressly indicated, do not assume it has been provided.

Any use which a third party makes of this Report, or any reliance on or decisions to be made based on it, are the sole responsibility of the third parties. Should additional parties require reliance on this Report, written authorization from Golder will be required. Golder disclaims responsibility of consequential financial effects on transactions or property values, or requirements for follow-up actions and costs.

Should you have any questions concerning this report, or the limitations set herein, please do not hesitate to contact our office.

9.0 QUALIFICATIONS OF THE ASSESSORS

Ms. Laura Fuentes de Maria, B.Sc., M.A.Sc.

Laura Fuentes de Maria is an Environmental Specialist in the Environmental and Corporate Services Division of Golder's Mississauga, Ontario office since 2006. Ms. Fuentes de Maria has experience in Environmental Due Diligence Reviews and Compliance Audits, as well as Phase I and Phase II Environmental Site Assessments for a variety of international clients in the manufacturing, automotive, mining, and electronics sectors in Mexico, Canada, and Argentina.

Ms. Fuentes de Maria graduated with honours from University of Nuevo Leon in Mexico with a Bachelor's Degree in Chemical Engineering in 2001; and, in 2006 obtained a Master's Degree in Chemical Engineering specializing in Environmental Engineering from the University of Toronto. Between degrees Ms. Fuentes de Maria worked at a commercial company in Monterrey, Mexico as Quality Control and Product Development Chief conducting quality control audits.

Mr. Tony Missiuna, P. Eng.

Mr. Missiuna is a Principal and Civil Engineer in Golder's Mississauga office. Tony has over 25 years of consulting related experience, predominantly working in the area of site assessment, site audits and remediation. He has managed numerous environmental projects locally and internationally related to environmental site assessment and compliance audits. Project management also includes projects where petroleum hydrocarbons and chlorinated solvents are potential issues and is a recognized expert in this field. In addition to his work in Ontario and other parts of Canada, Tony has and continues to work on projects globally to investigate and solve problems related to subsurface soil and groundwater contamination. He has prepared numerous site assessment work plans subsequently designed numerous remediation systems for petroleum hydrocarbon contamination and chlorinated solvent related impact. Tony works for legal and industrial clients to evaluate sites from a compliance perspective to an assessment perspective which includes investigations to determine the origin and extent of subsurface impact.

10.0 CLOSURE

We trust that the information presented in this report meets your current requirement. Should you have any questions, or concerns, please do not hesitate to contact the undersigned.

	<u>Section</u>
Report Summary	i
<i>This outlines the number of records from each database that fall on the site, and within various distances from the site.</i>	
Site Diagram	ii
<i>The records that were found within a specified distance from the project property (the primary search radius) have been plotted on a diagram to provide you with a visual representation of the information available. Sites will be plotted on the diagram if there is sufficient information from the database source to determine accurate geographic coordinates. Each plotted site is marked with an acronym identifying the database in which the record was found (i.e., WDS for Waste Disposal Sites). These are referred to as "Map Keys". A variety of problems are inherent when attempting to associate various government or private source records with locations. EcoLog ERIS has attempted to make the best fit possible between the available data and their positions on the site diagram.</i>	
Site Profile	iii
<i>This table describes the records that relate directly to the property that is being researched.</i>	
Detail Report	iv
<i>This section represents information, by database, for the records found within the primary search radius. Listed at the end of each database are the sites that could not be plotted on the locator diagram because of insufficient address information. These records will not have map keys. They have been included because they may be found to be relevant during a more detailed investigation.</i>

Appendix: Ontario Database Descriptions

EcoLog Environmental Risk Information Services Ltd can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to EcoLog ERIS at the time of update. **Note:** Databases denoted with "*" indicates that the database will no longer be updated. See the individual database descriptions for more information.

Provincial Government Source Databases:

Abandoned Aggregate Inventory Up to Sept 2002

AAGR

The MAAP Program maintains a database of all abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.

Aggregate Inventory Up to Mar 2008

AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. Please note that the database is only referenced by lot\concession and city/town location. The databases provides information regarding the registered owner/operator, location, status, licence type, and maximum tonnage.

Abandoned Mines Information System 1800-2005

AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Certificates of Approval 1985-Sept 2002

CA

This database contains the following types of approvals: Certificates of Approval (Air) issued under Section 9 of the Ontario EPA; Certificates of Approval (Industrial Wastewater) issued under Section 53 of the Ontario Water Resources Act ("OWRA"); and Certificates of Approval (Municipal/Provincial Sewage and Waterworks) issued under Sections 52 and 53 of the OWRA. For more current Certificate of Approval information please see the EBR database, which will include information such as 'Approval for discharge into the natural environment other than water (i.e. Air) (EPA s.9)', and Approval for sewage works (OWRA s.53(1)).

TSSA Commercial Fuel Oil Tanks 1948-Jan 2009

CFOT

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

Coal Gasification Plants 1987, 1988*

COAL

This inventory of all known and historical coal gasification plants was collected by the Ministry of Environment. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, landuse, soil condition, site operators/occupants, site description, and potential environmental impacts. This information is effective to 1988, but the program has since been discontinued.

Compliance and Convictions 1989-Jun 2009

CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Drill Holes 1886-2005

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Environmental Registry 1994-Jun 2009

EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, licence, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes things like; Approval for discharge into the natural environment other than water (i.e. Air), Permit to Take Water (PTTW), Certificate of Property Use (CPU), Approval for a waste disposal site, Order for preventative measures.(EPA s. 18), Order for conformity with Act for waste disposal sites.(EPA s. 44), Order for remedial work.(EPA s. 17) and many more.

TSSA Fuel Storage Tanks Current to Dec 2008

FST

The Technical Standards & Safety Authority (TSSA), under the *Technical Standards & Safety Act* of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Ontario Regulation 347 Waste Generators Summary 1986-Jun 2009

GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Mineral Occurrences 1846-Sept 2008

MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the planimetric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Non-Compliance Reports 1992(water only), 1994-2007

NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Ontario Oil and Gas Wells 1800-Jan 2009

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. Information available for all wells in the ERIS database include well owner/operator, location, permit start date, well cap date, licence number, status, depth and the primary target (rock unit) of the well being drilled.

Ontario Inventory of PCB Storage Sites 1987-Oct 2004

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Pesticide Register 1988-Nov 2008

PES

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

Private and Retail Fuel Storage Tanks 1989-1996*

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Ontario Regulation 347 Waste Receivers Summary 1986-2005

REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Record of Site Condition 1997-Sept 2001, Oct 2004-Jun 2009

RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use, such as residential, proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. Information available includes Registration Number, Filing Owner, Property Address, Filing Date and Municipality.

Ontario Spills 1988-2008

SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Wastewater Discharger Registration Database 1990-2006

SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Waste Disposal Sites - MOE CA Inventory 1970-Sept 2002

WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. For more current information for Waste Disposal Sites please see the EBR database, which will include information such as 'Approval for a waste disposal site (EPA s.27)' and 'Approval for use of a former waste disposal site (EPA s.46)'.

Waste Disposal Sites - MOE 1991 Historical Approval Inventory Up to Oct 1990*

WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Water Well Information System 1955-2008

WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. Geographic coordinates are reliable according to the given percentage. Wells that are identified with lot and concession only are now also included in the database and is no longer provided as a separate report.

Federal Government Source Databases:

Diagram Identifier:

Environmental Effects Monitoring 1992-2007*

EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Environmental Issues Inventory System 1992-2001*

EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Federal Convictions 1988-Jun 2007

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Contaminated Sites on Federal Land June 2000-May 2009

FCS

The Treasury Board of Canada Secretariat maintains an inventory of all known contaminated sites held by various Federal departments and agencies. This inventory does not include properties owned by Crown corporations, but does contain non-federal sites for which the Government of Canada has accepted some or all financial responsibility. All sites have been classified through a system developed by the Canadian Council of Ministers of the Environment. The database provides information on company name, location, site ID #, property use, classification, current status, contaminant type and plan of action for site remediation.

Fisheries & Oceans Fuel Tanks 1964-Sept 2003

FOFT

Fisheries & Oceans Canada maintains an inventory of all aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Indian & Northern Affairs Fuel Tanks 1950-Aug 2003

IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of all aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

National Analysis of Trends in Emergencies System (NATES) 1974-1994*

NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

National Defence & Canadian Forces Fuel Tanks Up to May 2001*

NDFT

The Department of National Defence and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

National Defence & Canadian Forces Spills Mar 1999-Jul 2009

NDSP

The Department of National Defence and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

National Defence & Canadian Forces Waste Disposal Sites 2001-April 2007

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

National Environmental Emergencies System (NEES) 1974-2003

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for all previous Environment Canada spill datasets. NEES is composed of the historic datasets – or Trends – which dates from approximately 1974 to present. **NEES Trends** is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

National PCB Inventory 1988-June 2004

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. All federal out-of-service PCB containing equipment and all PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites.

National Pollutant Release Inventory 1993-2007

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers of 178 specified substances.

Parks Canada Fuel Storage Tanks 1920-Jan 2005

PCFT

Canadian Heritage maintains an inventory of all known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Transport Canada Fuel Storage Tanks 1970-March 2007

TCFT

With the provinces of BC, MB, NB, NF, ON, PE, and QC; Transport Canada currently owns and operates 90 fuel storage tanks. This inventory will also include The Pickering Lands, which refers to the 7,530 hectares (18,600 acres) of land in Pickering, Markham and Uxbridge - owned by the Government of Canada since 1972. Properties on this land has been leased by the government since 1975, falls under the Site Management Policy of Transport Canada, but administered by Public Works and Government Services Canada. Our inventory provides information on the site name, location, tank age, capacity and fuel type.

Private Source Databases:

Anderson's Waste Disposal Sites 1860s-Present

ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the *Ontario MOE Waste Disposal Site Inventory*, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. *Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.*

Automobile Wrecking & Supplies 2001-Feb 2009

AUWR

This database provides an inventory of all known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Chemical Register 1992, 1999-Feb 2009

CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

ERIS Historical Searches 1999-Apr 2009

EHS

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Canadian Mine Locations 1998-2006

MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Oil and Gas Wells Oct 2001-Jun 2009

OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickles' database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Canadian Pulp and Paper 1999, 2002, 2004, 2005

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Retail Fuel Storage Tanks 2000-Feb 2009

RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks. Information is provided on company name, location and type of business.

Scott's Manufacturing Directory 1992-Jun 2008

SCT

Scott's Directories is a data bank containing information on over 70,000 manufacturers in Ontario. Even though Scott's listings are voluntary, it is the most comprehensive database of Ontario manufacturers available. Information concerning a company's address, plant size, and main products are included in this database. This database begins with 1992 information and is updated annually.

Anderson's Storage Tanks 1915-1953*

TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. *Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.*

APPENDIX D

SITE PHOTOGRAPHS

DRAFT

Photograph 1: Looking west along the southern perimeter of the Site.

Photograph 2: Northern portion of the Site where miscellaneous debris was observed.

Photograph 3: View of the Black Creek pump station located on the northern portion of the Site (west of the wooded area).

Photograph 4: Looking east towards the wooded area on the northern portion of the Site. Note wood logs, drums, and other miscellaneous materials.

Photograph 5: Looking south along the eastern perimeter of the Site.

Photograph 6: Ponded water observed on the northeastern portion of the Site. Miscellaneous debris was observed near the pond. No sheen was observed.

Photograph 7: Corrugated steel pipe that appears to be used for stormwater management directing the stormwater to the Site perimeters.

Photograph 8: General view looking southwest as seen from the northern perimeter of the Site.

Photograph 9: General view of the western portion of the Site where activities related to the growing of crops (vegetables) were being conducted.

Photograph 10: Miscellaneous debris observed on the western portion of the Site.

Photograph 11: Signage indicating the presence of an underground natural gas pipeline running east-west on the central part of the Site.

Photograph 12: A rail line is located adjacent to the northern perimeter of the Site.

At Golder Associates we strive to be the most respected global group of companies specializing in ground engineering and environmental services. Employee owned since our formation in 1960, we have created a unique culture with pride in ownership, resulting in long-term organizational stability. Golder professionals take the time to build an understanding of client needs and of the specific environments in which they operate. We continue to expand our technical capabilities and have experienced steady growth with employees now operating from offices located throughout Africa, Asia, Australasia, Europe, North America and South America.
